refunded. Please review the product details carefully before proceeding. For full details, see our Terms of Sale .

Description

the KnoxLock Small Format Interchangeable Core SFIC is an electronic lock core that takes existing hardware to the next level of access control and accountability. Cylinders are easy to install and provide cost-effective access tracking by retrofitting mechanical cores in most SFIC-compatible locks. KnoxLock SFIC is engineered for industrial-grade performance in both indoor and outdoor environments. It is highly resistant to dust, dirt, and moisture, offering reliability in even the harshest weather conditions. Powered by the Knox eKey, it requires minimal maintenance, with no batteries to change or cleaning requirements. Ideal for rapid access or combined with an online access control system; it delivers entry tracking in a wide range of applications, including offices, storage closets, egress doors, equipment cabinets, retail cases, and other places where wired solutions are impractical or cost prohibitive. It also brings accountability to override keyways - plugging a gap in many access control systems.
