1. THE EMERGENCY PREPAREDNESS TOOLKIT

1.1. INTRODUCTION TO THE EP TOOLKIT

1.1.1. BACKGROUND

IOM has been expanding its emergency preparedness (EP) portfolio to provide a platform for IOM staff to effectively anticipate, respond to and recover from the impacts of the likely, imminent or current disasters. As such, in 2020 the preparedness unit in the Preparedness and Response Division (PRD) provided the Emergency Preparedness Dashboard[1] and IOM Emergency Preparedness Guidance : Preparedness for Emergency Response in IOM[2] based on the Inter-Agency Standing Committee (IASC) Emergency Response Preparedness (ER P) approach. The EP Toolkit has been developed to expand on these guidance materials and to provide a more comprehensive package of practical tools to support the implementation of emergency preparedness activities in IOM.

1.1.2. WHAT IS THE EP TOOLKIT?

As part of these ongoing efforts to strengthen and institutionalize emergency preparedness in IOM, the aims of the EP Toolkit are to:

- Provide practical guidance on various emergency preparedness components;
- Describe what preparedness to respond to and planning for an emergency entails; and
- Explain how to develop and implement emergency preparedness projects.

In addition, the toolkit serves as an internal repository of tools and practices to complement IOM's preparedness efforts, and provide more granular information on implementation of preparedness activities.

It provides step-by-step directions along with useful resources and tools intended to support learning, and serve as a user guide/ 'how-to' guide for missions unfamiliar with EP on how to plan, design and implement EP activities for the first time.

1.1.3. WHO IS THE TOOLKIT FOR?

The toolkit was designed to be used by IOM field and regional staff, as well as staff who are interested in improving their capacity to prepare and respond to emergencies, and will not be limited to any particular region or country, type of disaster or emergency- but will be flexible and adaptable to fit different scenarios.

1.1.4. HOW TO USE THE EP TOOLKIT

How you use this toolkit will depend on your country context and where you are in the Humanitarian Programme Cycle.

First time EP implementation

If you are undertaking EP activities for the first time and you need an overview of the definitions, theories and concepts behind emergency preparedness, start with Section 2 of the EP Toolkit. Then, follow the steps in Components 3.01 Risk Analysis and 3.02 Preparedness and Contingency Response Planning as the outputs from these components will guide you to effectively design EP activities. Once you have identified relevant EP project activities, select the EP components in Section 3 that most closely resemble your planned activities and use the step-by-step guidance to help with more detailed planning, implementation and monitoring.

Already undertaking EP implementation

If you are already implementing EP activities, you may select the component(s) that most closely align to your activities and check that you are following the steps and taking advantage of available tools & resources that will support the implementation. It is still recommended to ensure your CO's processes reflect recommended practices in Components 3.01 and 3.02 to ensure your projects align to the most relevant risks in your context.

[1] The EP Dashboard is IOM's central repository of information on preparedness activities globally and a set of risk analysis resources.

[2] Provides information on how to conduct risk analysis and monitoring and the minimum preparedness actions checklist.

1.1.5. NAVIGATING THE EP TOOLKIT

How to navigate the EP Toolkit (Click on the bubbles to navigate to your desired section):

1.0 Introduction to the EP Toolkit
Features the background, purpose, description of intended users and structure of the toolkit

2.0 Overview of Emergency Preparedness
Shares links to relevant study materials to help users understand the basic theory and concepts behind emergency preparedness

3.0 Emergency Preparedness Components
Provides step-by-step guidance for implementing the 10 components of emergency preparedness

- 3.01 Risk Analysis
- 3.02 Preparedness and Contingency/Response Planning
- 3.03 Emergency Services / Response Mechanisms and Strategies
- 3.04 Resource Allocation and Funding Mechanisms
- 3.05 Coordination
- 3.06 Information Management and Communication
- 3.07 Early Warning Systems
- 3.08 Community-Based Disaster Preparedness
- 3.09 Capacity Development / Training Exercises
- 3.10 Institutional and Legislative Frameworks

4.0 Elements of Emergency Preparedness
Provides specific references to use when designing and developing emergency preparedness activities

- 4.01 Summary / List of Preparedness Activities
- 4.02 Cross-Cutting Issues in Emergency Preparedness
- 4.03 Project Development Checklist

SECTION 2

OVERVIEW OF EMERGENCY PREPAREDNESS

© IOM 2023

2. OVERVIEW OF EMERGENCY PREPAREDNESS

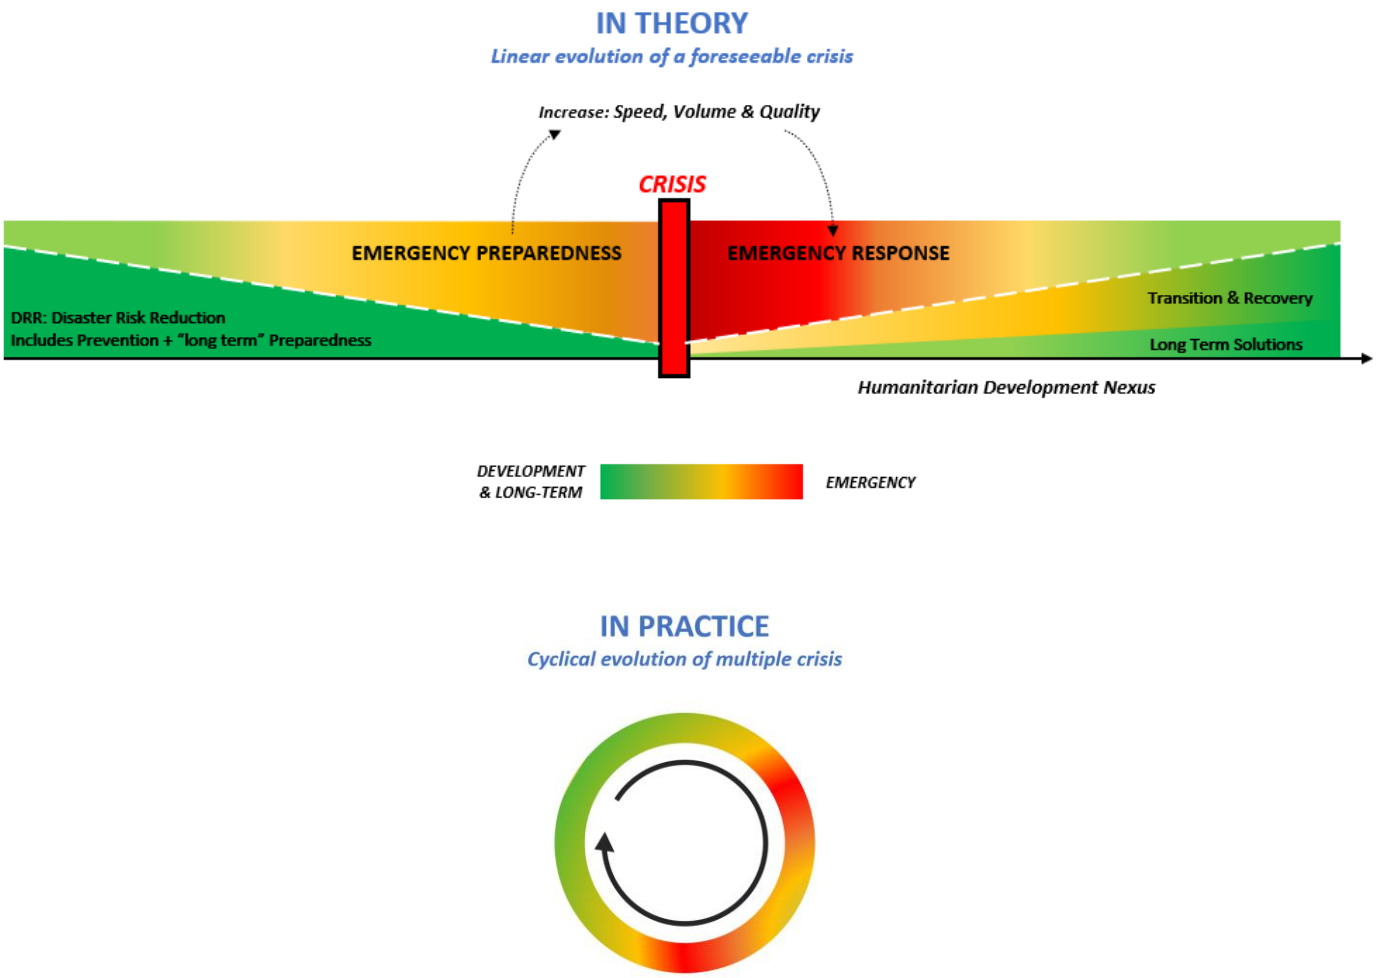

2.1. INTRODUCTION TO EMERGENCY PREPAREDNESS

'Preparedness' is defined as: "the knowledge and capacities to effectively anticipate, respond to and recover from the impacts of likely, imminent, or current disasters." This definition resonates with the Migration Crisis Operational Framework (MCOF)'s formulation of IOM's role before, during, and after a crisis.

'Emergency preparedness' (EP) or 'preparedness for emergency response' considers a shorter timeframe and has a narrower focus on increasing the capability and readiness to *respond to* an emergency. In other words, EP is not much about the longer-term perspective of preparedness ('anticipate' and 'recover' phases), but it rather focuses on improving the speed, volume, and quality of the emergency response.

This distinction is not clearly cut in practice. It is almost always the same persons as IOM focal points at the country level for DRR, EP, and/or emergency response. Furthermore, disaster and crisis often have a cyclical repetition of emergency and transition phases rather than a linear timeline (see figure below).

Overall, the aim of *emergency preparedness* is to act ahead of potential crises to improve the **speed**, **volume**, and **quality** of the emergency response.

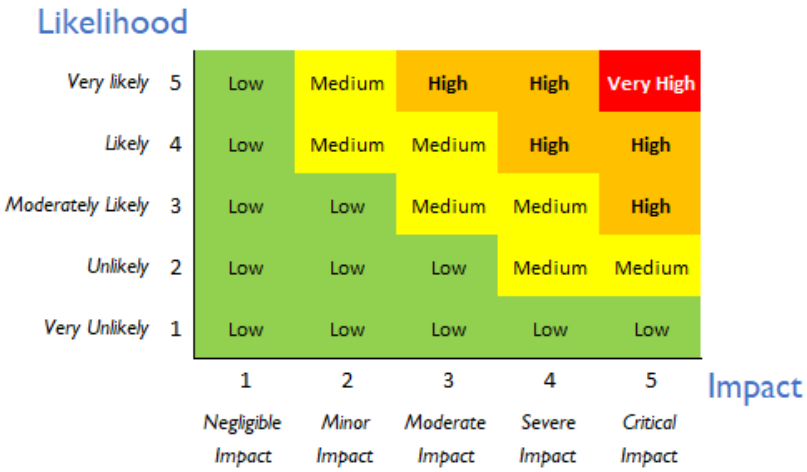

2.1.1. Key Considerations

IOM's Guidance Note on Preparedness with Emergency Response is aligned with the inter-agency one and is based on three main steps.

Step 1 – Risk Analysis & Monitoring

The risk analysis process identifies the hazards or events that could trigger an emergency. Hazards can then be ranked by calculating their Risk Seriousness based on potential impact and likelihood (*see details around impact and likelihood scale in Annex 1*).

- Different types of hazards and events
  - Slow onsets (e.g. drought) vs. sudden (e.g. earthquake)
  - Natural hazards vs. technological Armed conflicts, civil unrests
  - Socio-economic degradation
  - Epidemics
- Different timeframes/outlook periods
  - Seasonal/recurring (e.g. seasonal floods)
  - Evolving (e.g. armed conflicts, epidemics)
  - Static (e.g. earthquake)
- Importance of risk monitoring
  - Identified risks
  - Emerging risks

IMPACT x LIKELIHOOD = RISK SERIOUSNESS

E.g.: (4) Severe Impact x (4) Likely = (16) High Risk

Step 2 – Minimum Preparedness

- The Minimum Preparedness Actions (MPAs) aim at a minimum level of emergency preparedness to increase IOM's capacity to respond to any risk.
- These actions are not risk or scenario-specific and usually do not require significant additional resources to be implemented.
- The MPAs focus only on some key functional areas with checklists of approx. 5 actions per area (*see Annex 2 for light guidance*).

Step 3 –Contingency Planning

What is Contingency Planning?

"Contingency planning (CP) is a management process that analyses disaster risks and establishes arrangements in advance to enable timely, effective, and appropriate responses" (IFRC). The contingency planning process can largely be broken down into three simple questions:

1. What is going to happen?
2. What are we going to do about it?
3. What can we do ahead of time to get prepared?

You can find more information and details in the IOM Guidance Note around the following questions:

- When to develop a contingency plan?
- Contingency plan for which scenarios?
- One or multiple contingency plans?
- Linkages between an IOM contingency plan and inter-agency ones?

See Annex 3 (IOM contingency plan template) for a series of key questions and guidance for country teams while developing a contingency plan and identifying any preparedness gaps.

1 | Risk Monitoring

2 | Coordination & Management Arrangements

3 | Programs & Sector

4 | Human Resources

5 | Supply & Logistics

6 | Partnerships

7 | Advocacy & Communication

8 | Resources Mobilization

9 | Security & Business Continuity Plans

2.1.2. Coordination

Given IOM's vast engagement with communities and governments, as well as participation and contribution to inter-agency processes, IOM's guidance on emergency preparedness is aligned with the IASC Emergency Response Preparedness (ERP) guidance module. This inter-agency tool is the basis for a common understanding of emergency preparedness among UN actors and partners.

Who are the stakeholders in emergency preparedness?

The government is the primary entity and duty bearer responsible for emergency preparedness and response. The UN and other international and local partners seek to support government efforts in responding to an emergency. When the government requires external support, the UN/NGOs' interventions to "prepare and respond" should be coordinated through existing mechanisms in the country, notably through the sector/cluster system.

It is worth noting that any inter-agency or agency-specific preparedness plan should seek to align with national plans and priorities. Thus, discussions with the government and communities, both at country office and inter-agency levels, need to be made at an early stage, as joint planning, programming, and monitoring is vital to achieving a cohesive and well-coordinated response.

2.1.3. Common approach for emergency preparedness in the UN System

The IASC ERP approach is central to establishing common understanding of emergency preparedness among UN Agencies and partners. Most UN agencies use this methodology, or a slightly adapted version tailored to agency-specific mandates. IOM's guidance note builds on this same approach with more specific context to IOM's mandate in addressing and responding to migration crisis.

SECTION 3.1

EMERGENCY PREPAREDNESS COMPONENTS

RISK ANALYSIS

© IOM 2022

3. EMERGENCY PREPAREDNESS COMPONENTS

3.1. INTRODUCTION – RISK ANALYSIS

3.1.1. Purpose

This component of the toolkit prepares you to conduct risk analysis and risk monitoring processes and to implement minimum preparedness actions (MPAs).

3.1.2. Overview

Risk analysis aims to identify hazards and events that could trigger an emergency. Hazards are ranked based on their potential impact (i.e., humanitarian consequences) and likelihood (i.e., the probability of their occurrence).[3] Risk analysis is central to emergency preparedness as it evaluates and ranks the risks that might require a humanitarian response.

Risk monitoring draws from risk analysis to anticipate the occurrence of an emergency/crisis. All planning and implementation of disaster preparedness measures should be based on an assessment and prioritization of the hazards and risks that people face in a particular country or region, as well as their ability (or inability) to cope with and withstand the effects of these hazards.

Minimum Preparedness Actions (MPAs) consist in practical activities aimed at improving inter-agency response, accountability, and predictability that are necessary to the success of the emergency response phase. MPAs are free of charge to implement and therefore do not require mobilizing resources for Country Offices (COs). MPAs guarantee the effective coordination between humanitarian actors by including the perspective of affected populations.[4]

The outputs of risk analysis and risk monitoring processes will directly inform preparedness and contingency / response planning covered in component 3.02 of the Emergency Preparedness (EP) Toolkit.

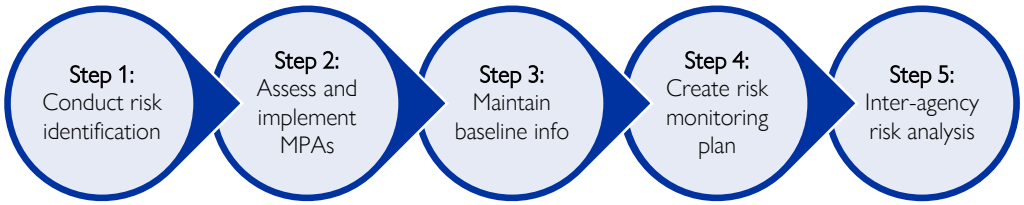

3.1.3. Why is it important?

- Effective risk analysis is an essential component of emergency preparedness as it provides a collective understanding and a prioritization of risks that might require a humanitarian response.[5]
- The MPAs are important because they promote more effective coordination between humanitarian actors that considers the perspective of affected populations.
- All planning and implementation of disaster preparedness measures should be based on assessment and prioritization of the hazards and risks that people face, as well as their ability or inability to cope with and withstand effects of hazards.[6]

[3] IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM
[4] IASC (2015) Emergency Response Preparedness Guidelines
[5] IOM (2020) An Introduction to Emergency Preparedness Self-Study
[6] Ibid

3.1.4. OVERVIEW OF STEPS

Step 1: Conduct risk identification

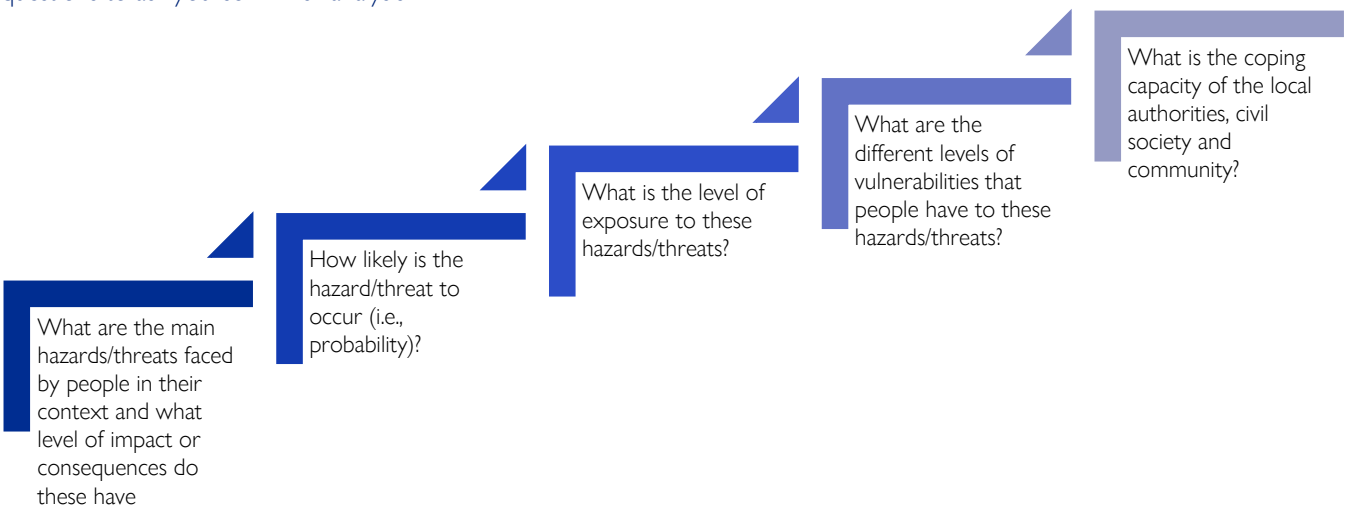

For information on how to conduct the risk analysis process, please go to Tool 1 - Guidance Note on Emergency Preparedness in IOM, and read pages 5 and 6 for guidance on the terminology and process of risk analysis. Annex 1 of the Guidance Note provides useful information on how to complete the impact and likelihood ratings in a risk seriousness matrix.

You may do the risk analysis process on your own considering existing risk information from internal and external data sources. Where possible, you may choose to conduct planning meetings with relevant colleagues who have a stake in preparedness and emergency response such as representatives from Camp Coordination and Camp Management (CCCM) program support, protection, shelter, Water, Sanitation, and Hygiene (WASH) etc. Your risk analysis process should include the following activities:

Step 1.1. Conduct a desk review to gather existing risk knowledge

To start, identify and gather pre-existing information on risks in your target area by using the following key questions.

Key questions to ask yourself in risk analysis[7]

Answers to the questions above will inform your analysis and risk monitoring.

Sources of information for risk analysis and monitoring

Internal Sources	External Sources
• Global Crisis Response Platform (GCRP) • Open-Source Software (OSS) Reports • DTM (Displacement Tracking Matrix) analysis/reports (if available in the country)	• Humanitarian Response Plans (HRPs) from the last three years • Humanitarian Needs Overviews (HNOs) • Prevention Web for information on DR (Disaster Risk) national platforms • Humanitarian and development agency joint risk analysis reports • Emergency Preparedness working group website • Research institutions (such as meteorological reports) • ACAPS, INFORM, ECHO, WFP Adam • Population Refugees & Migration (PRM) Emergency Dashboard

[7] Based on DG ECHO (2021) DG ECHO Guidance Note: Disaster Preparedness

If you are including other people in the risk analysis process, share your findings from the desk review with them before proceeding. Sharing information from the desk review will help all those involved gain a common and evidence-based understanding of the risks.

Step 1.2. Identify hazards/crisis events in the context

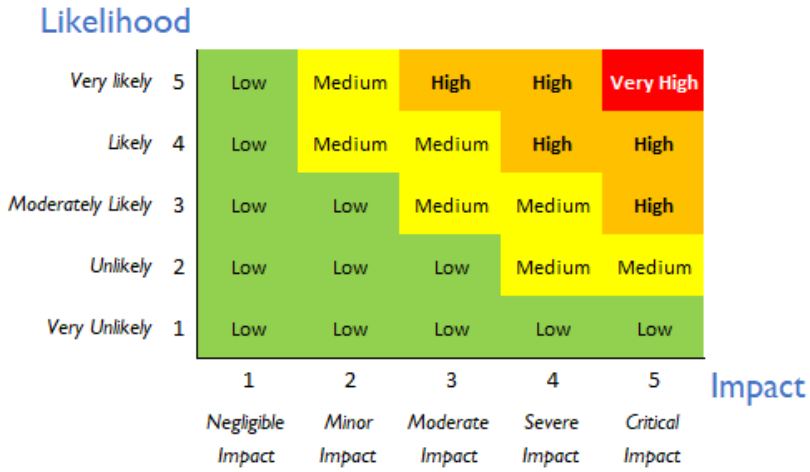

First, drawing from your desk research, identify a list of up to five potential hazards that may impact the situation in your context and will inform your risk analysis, e.g. cyclone, floods, earthquakes, civil unrest etc.

Step 1.3. Calculate risk seriousness

Second, using the Risk Seriousness table below, rate each of the hazards/crisis events according to likelihood and impact. Further information on impact and likelihood scales can be found in the Guidance Note: Preparedness for Emergency Response in IOM in the Key Tools & Resources section below.

Ensure you consider how hazards might impact migration and human mobility as this is IOM's focus and where IOM can best contribute to preparedness.

Risk seriousness table

IMPACT x LIKELIHOOD = RISK SERIOUSNESS

E.g.: (4) Severe Impact x (4) Likely = (16) High Risk

Third, calculate the risk seriousness rate by multiplying the impact rating by the likelihood rating. You will now be able to rank the five hazards in terms of their risk seriousness. The highest rating indicates the highest level of risk seriousness.

Sample risk seriousness calculation

Risk seriousness ratings can be interpreted as follows.

Hazard	Impact	Likelihood	Risk Seriousness
1. Armed conflict	5	5	15
2. Earthquake	4	3	12
3. Monkeypox Pandemic	3	3	9
4. Floods	3	2	6
5. Drought	3	1	3

Risk seriousness levels

Risk Seriousness	Ratings Ranges
Low	1-7
Medium	8-14
High	15-25

Risk seriousness rankings help prioritize emergency preparedness actions and projects. In the sample risk seriousness calculation above, armed conflict has the highest level of risk seriousness and is a priority whilst earthquake and Monkeypox Pandemic have a medium level of risk. The high and medium level risks require preparedness actions and projects. Of lower priority are floods and drought in this context.

You can find links to multiple risk monitoring tools and resources for multi-hazard/crisis, natural hazards and conflicts and socio-economic events on the EP Dashboard. See Tool 2 in the Key Tools & Resources section below for the link.

Step 2: Assess and implement MPAs

After conducting Risk Analysis, you may ensure that the IOM Country Office (CO) meets Minimum Preparedness standards.

If you are completing the MPA (Minimum Preparedness Actions) Checklist for the first time, please go to the Guidance Note: Preparedness for Emergency Response in IOM, and read page 7 for guidance on the terminology and how to use the MPA Checklist. Assess the IOM CO by filling in the checklist contained in Annex 2 of the Guidance Note on Emergency Preparedness.

Step 2.1. Complete the MPA Checklist

Once you have completed the MPA checklist, it will help you to make sense of the CO's emergency preparedness level and how to improve it.

Step 2.2. Create an action plan for meeting the MPAs (if required)

The following step consists in developing an action plan to meet the minimum preparedness requirements. First, identify any gaps in preparedness activities (e.g. early warning indicators, trainings) . Second, develop an action plan to redress the latter by assigning responsibilities and deadlines. Unless you are already meeting all of the minimum preparedness actions, you will need to develop an action plan for meeting them. Where you have a gap, first identify a specific preparedness activity such as a develop early warning indicators, conduct a training or develop a report template that addresses the gap. Then create an action plan that will help you meet the MPAs.

Step 3: Identify early warning indicators

If you have not yet established early warning indicators for the identified risks your context, check whether there are any established inter-agency early warning indicators available for you to use. If not, normally you will work together with senior management to identify appropriate early warning indicators in your context.

Typically for each hazard type, there are two or three indicators used which would include number of displaced people per location per week, as this is a primary focus of IOM, followed by more hazard-specific indicators.

Indicators will vary according to the hazard being monitored. The ideal indicator is an event that always happens before a hazard event occurs, and never at any other time. Unfortunately, such indicators are rarely found, but the principle is important. Indicators that happen frequently regardless of whether a hazard event subsequently occurs are of no use.

Example early warning indicators by hazard classification and type

Classification	Type	Example early warning indicators
Evolving	Armed conflict	5,000 new displaced per week Reduced humanitarian access to areas of the country. (#number of sub-national localities without authorization to access)
Seasonal/recurring	Flooding	Floods/storms affect 5,000 to 50,000 people and displace <2000 people Alert category 4 Significant riverine or flash flooding occurring as a result of heavy rains or a tropical storm. Notable urban flooding reported.
Static	Earthquake	10,000 new displaced per week Reduced access to mountainous areas because of road damage/landslides 3,000 homes destroyed and 2,000 homes damaged

In many cases local and national information sources will be most useful for helping you to identify early warning indicators.

When selecting indicators from external sources, use globally accepted tools to ensure you are aligning with a coordinated intersectoral response.

Recommended global sources for developing early warning indicators

Resource	Description	When to Use
IOM Risk monitoring basic resources on the EP Dashboard	A series of resources available for analysis of multi hazards/crisis, natural hazards, conflicts and socio-economic risks	Apply the tools that fit into your emergency preparedness context to inform your risk analysis.
Country Joint Intersectoral Framework (JIAF)	Supports and guides the holistic analysis of the humanitarian consequences of crises, and main underlying factors.	The JIAF is useful to any risk analysis, but is only available in certain countries.
Humanitarian Indicator Registry (HIR)	These are a set of standard indicators developed by global clusters as a complimentary of the IASC HPC reference module.	Useful in countries where clusters are operating and indicators can be coordinated between clusters.

IDMC	Provides the *Model for Disaster-Risk Displacement which* estimates the risk of displacement (i.e., how many displacements by which natural hazard are likely to occur, on average, each year, decade or century within a city, country or region).	Use in contexts where there are natural disasters that historically cause displacement.
Seasonal Calendars (e.g. FEWS NET)	FEWS NET is a famine early warning system operating in 38 countries and provides reliable information in places that are food insecure.	Use FEWS NET or other seasonal calendar tools where there is a historical cycle of hazard events related to seasonal changes.

You can find links for these resources in the Additional Tools & Resources section below.

Step 4: Establish/Maintain information on the country baseline situation

After conducting risk analysis and before tackling an emergency situation, you must establish the baseline situation. IOM baseline situations focus on historical patterns and trends in mobile populations in reaction to hazard and crisis events. Baseline situations should include any historical data trends relating to mobile populations and bring awareness to the risks faced by populations at risks (e.g., migrants, women, disabled people, unaccompanied minors, mixed flow populations).

To create a baseline, you will need to track pre-crisis sex and age-disaggregated data and information - including gender and diversity analysis to inform any future emergency responses.

The following table offers useful sources for establishing a baseline situation analysis:

Recommended sources for country baseline situation analysis

Resource	Description	When to Use
Displacement Tracking Matrix (DTM)	Shares guidance and tools for planning together starting from decisions and information needs.	Use as a first point of reference for establishing the country baseline situation
Global Migration Data Analysis Centre (GMDAC)	The Migration Data Portal provides a trusted source for comprehensive migration statistics and reliable information about migration data in the Migration Data Portal.	Use as a first point of reference for baseline information to ensure your CO baseline is aligned with IOM existing knowledge.
Country Census Information	National authorities in your country of operation track demographic information.	Always cross-check your statistics with government demographic information.
Mixed Migration Centre	Provides the latest mixed migration trends and dynamics around the world in quarterly reports.	Use when you need up-to-date information on migration trends.
World Bank	Holds a data collection, including analysis and visualization of data, on a variety of development topics.	Useful for background statistics and development indicators.

Links to these resources are available in the Additional Tools and Resources section below.

The early warning indicators you have identified as relevant, will then be used in your risk monitoring plan and for preparedness and contingency/response planning.

Step 5: Monitor and communicate risks

Different types of hazards/crisis events require different outlooks for risk monitoring. Risk monitoring considers initial risk analysis, early warning indicators, and the baseline situation.

Step 5.1. Monitor early warning indicators

The early warning indicators should be monitored on a scheduled basis; the timing will depend on the availability of new information, the nature of the hazard being monitored, as well as the trend of the risk. If the risk is rising, for example, indicators should be checked more frequently to ensure readiness to respond or activate contingency plan in the event that the risk materializes.

Using Page 6 of the IOM Emergency preparedness Guidance Note, create a plan for monitoring each of the hazards/crisis events.

Step 5.2. Share risk information

Sharing risk monitoring information across COs, Regional Offices (ROs) and at the global level can help inform overall program planning, design, and monitoring to ensure that all actions taken by the CO are risk informed.

CO risk information must be published and updated on the Emergency Preparedness Dashboard to ensure IOM can understand risks globally and support COs effectively in the future.

Please feel free to inform your colleagues when coming across new relevant sources or information regarding risk management.

Below are different ways you can share risk information with your CO.

Ways to share risk information internally

It is recommended that your CO also shares risk information with the communities they work with. For more guidance on how to share risk information with communities, see Component 3.07 Early Warning Systems.

Step 6: Contribute to inter-agency risk analysis

To carry out an inter-agency risk analysis, please use the existing inter-agency coordination mechanism: Office for Coordination of Humanitarian Affairs' (OCHA's) inter-cluster coordination group (ICCG) clusters and sectors.

Inter-agency risk analysis and risk monitoring are useful processes to grasp the full array of partners involved in a specific context and can help build a joint contingency / response planning.

Please ensure that IOM risk analyses are in line with inter-agency thinking. One way to do this is to apply the Capacity for Disaster Reduction Initiative (CADRI) Tool for DRR (Disaster Risk Reduction) Capacity Diagnosis and Planning (See Tool 3 in the Key Tools & Resources section below.) which is designed to support countries and inter-agency efforts to strengthen national and local capacities for reducing disaster and climate-related risks.

For a brief overview of inter-agency risk analysis, please refer to the Emergency Response Preparedness Guidelines in the Tools & Resources section below.

3.1.5. ROLES AND RESPONSIBILITIES

- Government role

Government will conduct their own risk analysis at national and local levels to inform preparedness and contingency/response planning and they may ask for help from international organizations. When working with international partners, they will ideally share their risk analysis findings so that emergency preparedness plans can be aligned and coordinated.

- Partners and inter-agency role

Partners may support the government by facilitating coordinated risk analysis exercizes through the United Nations (UN's) Emergency Response Preparedness process. UN agencies and partners have the responsibility to share risk monitoring information with government and partners which promotes joint planning and monitoring.

- IOM role

IOM will implement an evidence-based risk analysis process to inform the CO's preparedness and contingency/response planning. IOM will also assess and implement MPAs and create plans to improve preparedness, as needed. Emergency focal points are responsible for sharing Information about risks internally so that actions across the CO are risk-informed. Where applicable, IOM may elect to participate in inter-agency risk analysis.

3.1.6. Key Messages:

1. Effective risk analysis is an essential component of the emergency preparedness as it provides both a collective understanding and a prioritization of risks that might require a humanitarian response.
2. Overall risk analysis should be carried out at least once a year and twice a year for medium and high-level risks. The risk analysis process involves the emergency focal point, but may include others to contribute from the CO, government and non-government actors.
3. Thorough desk review of existing risk information and analysis of risk seriousness are key activities in the risk analysis process. Sharing risk information amongst IOM colleagues at the CO and global levels promotes joint understanding and risk-informed decisions. The MPAs are free to implement and CO's do not need to worry about resource mobilisation to use them as a tool for improvement.

3.1.7. KEY TOOLS & RESOURCES

Internal IOM:

TOOL 1 – IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM

- Provides information on how to conduct risk analysis and monitoring and the minimum preparedness actions (MPA) checklist.

Annex 2: MPA Checklist

TOOL 2 – IOM (website) EP Dashboard - Risk monitoring tools and resources

- IOM's central repository of information on preparedness activities globally and a set of risk analysis resources. (Select Resources: Risk Analysis view from the menu.)

TOOL 3 – CADRI Tool for DRR Capacity Diagnosis and Planning

- Supports countries in their efforts to strengthen national and local capacities to reduce disaster and climate related risks by providing a bank of questions for assessments.

TOOL 4 – IOM Global Crisis Response Platform (GCRP)

- Presents an overview of IOM's immediate and longer-term planning and funding requirements to respond to the evolving needs of those impacted by, or at risk of, crises and displacement, On the GCRP Home Page-Dashboard tab, you can filter Disaster Prevention and Preparedness activities to see what other COs DP activities are and documents from their preparedness projects.

3.1.8. ADDITIONAL TOOLS & RESOURCES- EXTERNAL

For risk analysis guidance and examples:

- Assessment Capacities Project (ACAPS) (2019): Introduction to ACAPS Risk Analysis Methodology: Provides detailed guidance on the risk analysis process through a technical brief.
- PreventionWeb Platforms: Provides declared national coordinating multi-sectoral and inter-disciplinary mechanisms for advocacy, coordination, analysis, and advice on DRR.

For country baseline situation analysis:

- Displacement Tracking Matrix (DTM) and Partners Toolkit: Shares guidance and tools for planning together starting from decisions and information needs.
- IOM Migration Data Analysis Centre: Trusted source for comprehensive migration statistics and reliable information about migration data.
- Internal Displacement Monitoring Centre (IDMC) Model for Disaster Risk-Displacement: Calculates how many people may be forced to flee using recorded and forecast hazard information.
- World Bank Open Data Portal: Provides access to global development data through this portal including country profiles and population data.
- PreventionWeb National Platforms: Provides declared national coordinating multi-sectoral and inter-disciplinary mechanisms for advocacy, coordination, analysis, and advice on DRR.

For inter-agency risk analysis:

- IASC (Inter-Agency Standing Committee) (2015) Emergency Response Preparedness (ERP) Guidelines
    - Provides overview guidance on the ERP process for agencies that want to contribute to inter-agency preparedness with the HCT (Humanitarian Country Team).

SECTION 3.2

EMERGENCY PREPAREDNESS COMPONENTS

PREPAREDNESS AND CONTINGENCY/RESPONSE PLANNING

© IOM 2022

3.2. INTRODUCTION - PREPAREDNESS AND CONTINGENCY/RESPONSE PLANNING

3.2.1. Purpose

This component of the toolkit prepares you to create contingency/response plans and to conceptualize projectized activities for improving response preparedness.

3.2.2. Overview

Contingency planning (CP) is a management process that analyses disaster risks and establishes arrangements in advance to enable timely, effective, and appropriate responses.

CP results in organized and coordinated courses of action with clearly identified institutional roles and resources, information processes and operational arrangements for specific actors at times of need.[8] It sets out IOM's initial response strategy and operational plan to meet humanitarian needs during the first three to four weeks of an emergency[9].

Where there is a gap or obstacle in the response that requires funding to address, the Country Office (CO) may identify the need for a projectized preparedness activity. Projectized preparedness activities are funded activities directly aimed and building preparedness capacity of key stakeholders from the government, civil society and/or communities.

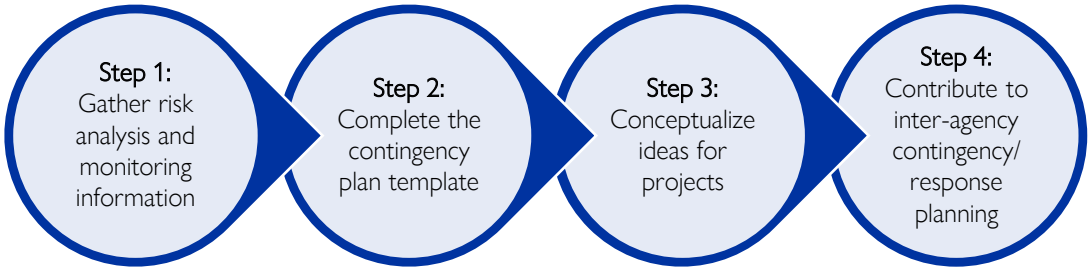

3.2.3. Why is it important?

- Contingency Planning gives your CO the ability to prioritize and categorize risks into best case, most likely case and worst-case scenarios.
- Adequate preparedness planning is essential to ensuring that mobility can be tapped as a viable life-saving strategy for people exposed to continued risk.
- Preparedness will help ensure that people can make informed choices in the event of crisis and remain mobile for the shortest period possible to facilitate a swift recovery[10].

[8] IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM
[9] IASC (2015) Emergency Response Preparedness Guidelines
[10] IOM (2020) An IOM Introduction to Emergency Preparedness Self-Study, Pg. 14

3.2.4. OVERVIEW OF STEPS

Step 1: Gather risk analysis and monitoring information

Effective preparedness and contingency/response planning can only take place if informed by risk analysis and monitoring. If you have not yet completed a risk analysis process in your CO, go to component 3.01 Risk analysis of the Emergency Preparedness (EP) Toolkit and complete all the steps for risk analysis before proceeding to Step 2 in this component.

For this component, you will select and work with the risks you analysed to have a medium to high levels of risk seriousness during the risk analysis/monitoring process.

Step 2: Complete the contingency plan template

2.1. Identify early warning indicators

To identify early warning indicators, check whether any have been established by other agencies. If not, reach out to senior management to identify indicators relevant to this specific context.

There are usually 2-3 indicators for each hazard type. Indicators include the weekly number of displaced people - IOM's primary focus - followed by more hazard-specific indicators.

Indicators vary according to the hazard. Ideally, an indicator should only manifest before the occurrence of a specific hazard. Such indicators are rare, but they remain a good reminder that indicators that are too frequent and unrelated to any hazard are useless[11].

Example of early warning indicators by hazard classification and type:

Classification	Type	Example early warning indicators
Evolving	Armed conflict	• 5,000 new displaced per week • Reduced humanitarian access to areas of the country. (# of sub-national localities without authorization to access)
Seasonal/recurring	Flooding	• Floods/storms affect 5,000 to 50,000 people and displace <2000 people • Alert category 4 • Significant riverine or flash flooding occurring as a result of heavy rains or a tropical storm. • Notable urban flooding reported.
Static	Earthquake	• 10,000 new displaced per week • Reduced access to mountainous areas because of road damage/landslides • 3,000 homes destroyed and 2,000 homes damaged

In many cases internal sources - local and national will be most useful for helping you to identify early warning indicators.

When selecting indicators from external sources, use globally accepted tools to ensure you are aligning with a coordinated intersectoral response.

[11] IASC (2015) Emergency Response Preparedness Guidelines, Pg. 36

Tools and resources for developing early warning indicators:

Resource	Description	When/Where/How?
Country Joint Intersectoral Analysis Framework (JIAF)	Guidance on how to analyse the humanitarian consequences of crises and their main underlying factors	Use when working in a country that uses the JIAF.
Famine Early Warning System (FEWSNET)	Famine early warning system operating in 38 countries and provides reliable information in places that are food insecure.	Use where there is a historical cycle of hazard events (e.g., famine, food insecurity, drought) related to seasonal changes.
Humanitarian Indicator Registry (HIR)	Set of standard indicators developed by global clusters as a complimentary of the Inter-Agency Standing Committee (IASC) Humanitarian Programme Cycle (HPC) reference module.	In countries where clusters are operating, and indicators can be coordinated between clusters.
Internal Displacement Monitoring Center (IDMC)	Provides the *Model for Disaster-Risk Displacement which* estimates the risk of displacement (e.g., causes and kinds of displacement, hazards, likelihood).	Use in contexts where there are natural phenomena that have caused displacement in the past.
IOM Risk monitoring basic resources on the EP Dashboard	A series of resources for analysing multiple crises, natural hazards, conflicts, and socioeconomic risks	Select the risk analysis tools that are relevant to your country context.

Links to these resources are available in the Additional Tools & Resources section below.

2.2. Complete the contingency response plan template

IOM contingency plan templates are to be developed in coordination with IOM colleagues from key departments, e.g., staff security (OSS), Global stocks, program staff (CCCM, shelter etc.) Procurement, HR, finance etc. after discussing risk scenarios, specific response strategies, and the coordination mechanisms required for addressing pressing emergency situations.

These discussions lead to the development of a written CP, which documents all response trigger mechanisms to be activated in the event of specified hazards (e.g., agreed response strategies, priority emergency services, coordination mechanisms, division of tasks and responsibilities). The CP contains the sections that help your office to prioritize and categorize risks into best case, most likely case and worst-case scenarios.

Please refer to Page 8 in Tool 1 - Guidance Note: Preparedness for Emergency Response in IOM in the Key Tools & Resources section for guidance on the terminology and procedure of CPs (Contingency Plans). CPs should be no longer than 10 pages. Annex 3 provides responses to FAQs and a template for completing CPs."

Step 3: Conceptualize ideas for projects

The CP phase makes sense of the national authority, civil society, and community's respective capacities for coping with hazards and crises events when they occur.

Section 6 of the Contingency Plan template in Annex 3 lays out the gaps and obstacles that might impede on emergency response

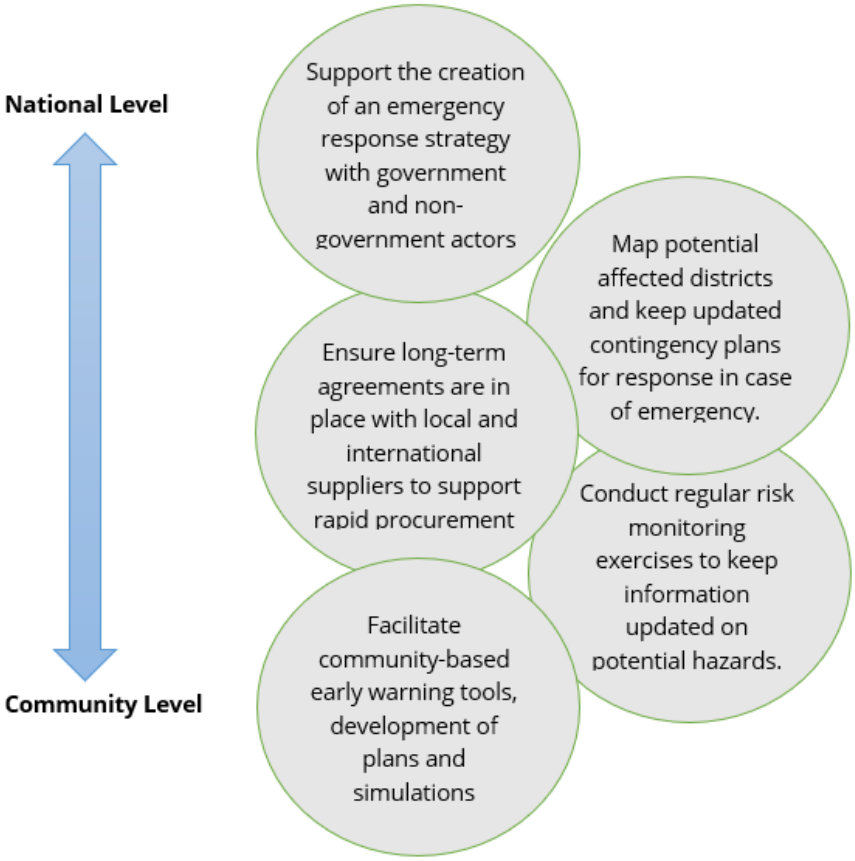

3.1. Come up with preparedness project ideas

To mitigate the impact of external obstacles on preparedness activities, each CO must develop activities tailored for the needs of preparedness projects.

Based on the CP, list out several possible preparedness activities that the CO could implement to address response gaps and obstacles.

Sample IOM preparedness activities at different levels

Below are some examples of IOM preparedness activities currently being undertaken from the national to the community level:

You can find several more examples on the Global Crisis Response Plan (GCRP) website and EP Dashboard. Links to these are in the Additional Tools & Resources section below.

Project ideas can also draw inspiration from national government priorities. For example, government disaster risk management initiatives and platforms can provide inspiring templates for strategies and plans.

3.2. Assess your project ideas for success

You can evaluate the quality of your CP / initial project idea by answering the following questions:

Project idea questions for success

Does the project idea…	Sub-questions
Address the preparedness needs of the intended beneficiaries?	Who are the beneficiaries and what are their needs according to the Preparedness Gaps/Obstacles section of the Contingency Plan?
Fall in line with donor priorities and funding mechanisms?	What is the likelihood that the project will receive funding? What are the DRM/preparedness priorities of major donors with an interest in your context?
Consider the priorities, strategies, and policies of key stakeholders?	Where are the priorities and strategies of the IOM, the host government, the United Nations Country Team (UNCT), the Humanitarian Country Team (HCT) and other stakeholders in preparedness? What is the capacity of partners in the project? What partnership is needed with government and non-government stakeholders?
Fall within IOM's capacities, Mission, and strategic focus?	Your EP activities would fall under IOM's GCRP's Objective 3: Strengthening Preparedness and Reducing Disaster Risk. Activities for preparedness are given the "EP" code, though they may also come under other sector-related code such as shelter or WASH (Water, Sanitation, and Hygiene)[12].

[12] IOM (2022) Standard Project Types and Descriptions

3.3. Conduct further situational analysis on the project idea

Answers to the above questions should be positive to conduct further situational analysis of the project idea. If some answers are negative, the project should be revised.

The following stage consists in conducting a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis. SWOT Analysis provide a straightforward way to assess how a preparedness activity can best be implemented by providing a framework of the internal strengths, weaknesses, external opportunities, and threats.

This tool helps understand how realistic the CO's ambitions are and how to improve them. More information about SWOT analysis can be found in the Tools & Resources below.

SWOT Analysis for preparedness activities

Keeping in mind the potential pwreparedness activities previously imagined, answer the following questions for the SWOT analysis:

Strengths	Weaknesses
What are your CO's strengths to implement the preparedness activities? (i.e., expertise in preparedness, training, available resources etc.)	What are your CO's weaknesses to implement the preparedness activities? (i.e., lack of experience in preparedness expertise, lack of staff time available)
Opportunities	**Threats**
What are the opportunities in the external environment that you could take advantage of if you implement this project? (i.e., existing trust with national/local authority)	What are the threats from the external environment that we might encounter if we implement this project? (i.e., lack of access due to security threats)

Drawing from the conclusions reached in the SWOT analysis, the CO should be able to define the strengths and weaknesses that would benefit or impede on the implementation of the preparedness activities.

Weaknesses do not necessarily entail that a project is not feasible. For example, if CO staff do not have the expertise to carry out an activity, emphasis can be put on building internal capacity (e.g., staff training, asking support from regional or global levels).

The EP Dashboard holds a repository of information on worldwide EP projects. See links in the Tools & Resources section below.

More information on various available analysis tools can be found in the Tool 2 - IOM Project Handbook, Section 1.3 'Conduct a Situation Analysis'.

3.4. Prepare a concept note

At this stage, you should prepare a concept note about your identified preparedness activities. The concept note can be a useful communication tool to share project ideas with management and team members internally. You may also share it with donors and adapt it for use with stakeholders engaged with the project (i.e., national/local authorities, civil society organizations and communities, where appropriate).

Concept notes must lay out how they involve the affected population, how the project is sustainable and time-bound based on up-to-date reliable information. Projects must respond to the priority preparedness needs of the most vulnerable affected groups and align with existing national and sector / cluster plans where applicable.

Proposed preparedness project ideas must align with government plans and strategies. IOM preparedness projects are intended to support nationally owned and driven disaster/crisis response. Successful projects in the past have been adopted as IOM-supported government programmes rather than IOM programs in partnership with government.

3.5. Identify and engage potential stakeholders to refine the concept

Potential project stakeholders should be engaged in project conceptualization as early as possible to ensure that they support the concept and that their ideas are included in the next stage of the design. Governments are key stakeholders at both national and local levels. Please find guidance on how to approach government officials with preparedness ideas below:

Talking points with government on your preparedness project idea[13]

- Share the purpose, objectives, and expected outcomes of the preparedness project idea.
- Describe the steps and logistics of the preparedness project.
- Explain the sources of funding for the process and proposed projects.
- Discuss how the process should enhance disaster preparedness and durable solutions to displacement.
- Demonstrate how the project idea aligns with existing government policy and development frameworks.
- Manage expectations in terms of resources available and parameters and limitations of the project.
- Ask which government bodies at each level of administrative division should be consulted and involved in the preparedness project process and which official channels should be used.
- Listen to government counterparts and create space for them to describe existing planning processes, strategies and their vision for preparedness.
- Establish how the project process should be communicated to other stakeholders and the public.

Identifying and engaging with a broader range of stakeholders is essential to provide realistic expectations and gain support for the preparedness activities.

Once the project concept has been agreed upon and is supported by the government, stakeholders from civil society, and the local population should be consulted through further scoping meetings. For detailed step-by-step guidance on community engagement, please refer to the Community-Based Planning Manual in the Tools & Resources section below.

At this point, information gathered during engagement with the government and other stakeholders should be included in the concept note.

Once the concept note has been revised, proceed to developing an EP project proposal. Refer to EP Toolkit component 4.03 Project Development for further guidance on project development.

Step 4: Contribute to inter-agency contingency/response planning

Inter-agency planning can provide a clear overview of the actors involved in the anticipated emergency, its collateral humanitarian needs, and the scope of the operational response.

For practical guidance and further information on inter-agency contingency / response planning through Emergency Response Planning (ERP), please refer to Tool 3 - Emergency Response Preparedness Guidelines in the Key Tools & Resources section below. Where the Camp Coordination and Camp Management (CCCM) cluster / sector is operational, you may also refer to the CCCM cluster / sector.

Partaking in the ERP process implies working with inter-agency partners to define the sector / cluster response strategy in response to the imminent needs of affected populations within the first week of emergency. Funding needs and potential challenges / gaps must be documented to be redressed successfully.

Finally - where IOM has participated in inter-agency contingency/response planning - IOM contingency/response plans must align with inter-agency thinking.[14]

[13] IOM (2022) Participation in Practice: Community-Based Planning Manual

[14] IASC (2015) Emergency Response Preparedness Guidelines

3.2.5. ROLES AND RESPONSIBILITIES

- Government role

The government, typically the Department of Civil Protection, is the primary entity and duty bearer for emergency preparedness and response at national and local levels. When the government requires external support, they may invite IOM, partners, and other stakeholders to contribute to preparedness and contingency/response planning.

- Partners and inter-agency role

The UN (United Nations) and other international and local partners can offer to support the efforts of government in preparedness and contingency/response planning. Depending on the risk context, partners will engage in ERP and inter-agency planning through the Humanitarian Response Plan (HRP) process and/or develop sector/cluster preparedness plans. It is the responsibility of partners to ensure that plans are closely coordinated with government and aligned with national plans and priorities. Ideally the government and partners will create joint preparedness and contingency/response planning to ensure close coordination and promote fast response.

- IOM role

Preparedness and contingency/response planning responsibilities help to ensure that COs are prepared for hazards with medium to high-level risk seriousness. Preparedness activities should be developed to address gaps and obstacles identified in the best, most likely and worse case scenarios you analyzed during the process of contingency/response planning. IOM may also contribute to joint preparedness planning through ERP and HRP processes as well as sector/cluster preparedness plans.

3.2.6. KEY MESSAGES

1. Contingency/response planning is essential for increasing the speed, volume and quality of crisis/disaster response. Evidence-based CPs can lead you to conceptualise relevant preparedness projects that will contribute to improved disaster preparedness.Contingency/response planning is important because it can help to ensure timely and effective humanitarian aid to those who need it most.
2. Contingency/response plans should be revised at least once a year and more often for different categories of risk. The emergency focal point will normally lead preparedness and contingency planning involving key stakeholders from the CO, government, and non-government actors.
3. Preparedness and contingency/response planning should be evidence-based using available trusted national and global resources. Successful projects in the past have been adopted as government programmes, supported by IOM, rather than IOM programmes in partnership with government.

3.2.7. KEY TOOLS & RESOURCES

TOOL 1 – IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM

- Provides information on how to conduct risk analysis and monitoring and the minimum preparedness actions checklist.
  - IOM Emergency Preparedness | Guidance (sharepoint.com)
- Annex 3 provides information on how to complete the CP and the CP template.
  - IOM EP Guidance Note_Annex3_Contingency Plan Template - V_1.1

TOOL 2 – IOM (2017) IOM Project Handbook

- Outlines standard processes, roles and tools for the six phases of project management. It also provides detailed guidance on how to conceptualize a project idea and how to develop project proposals.
  - IOM Project Handbook

TOOL 3 - IASC (2015) Emergency Response Preparedness (ERP) Guidelines

- Provides overview guidance on the ERP process for agencies that want to contribute to inter-agency preparedness with the Humanitarian Country Team.
  - IASC Emergency Response Preparedness Guidelines

3.2.8. ADDITIONAL TOOLS & RESOURCES

For developing early warning indicators:

- JIAF (2021) Joint Intersectoral Analysis Framework (JIAF)
  - Supports and guides the holistic analysis of the humanitarian consequences of crises, and main underlying factors. Joint Intersectoral Analysis Framework | Global Humanitarian Overview
- FEWSNET (website) Famine Early Warning System (FEWS)
  - Operates in 38 countries and provides reliable information on early warning indicators in places that are food insecure. FEWSNET
- Office for the Coordination of Humanitarian Affairs (OCHA) (website) Humanitarian Indicators Registry
  - Sets out standard indicators developed by global clusters as a complimentary of the IASC Humanitarian Programme Cycle reference module. Humanitarian Indicator Registry
- IDMC (website) Internal Displacement Monitoring Centre (IDMC)
  - Provides key information and data on internal displacement at the country level. Internal Displacement Monitoring Centre (IDMC)
- IOM (website) Emergency Preparedness (EP) Dashboard
  - Provides information on operational support needs, inter-agency partnerships, knowledge management and reporting on emergency preparedness at IOM. IOM Emergency Preparedness Dashboard (Ongoing Version) - Power BI

For the SWOT Analysis tool:

- Overseas Development Institute (ODI) – Strengths, Weaknesses, Opportunities and Threats (SWOT) Analysis
  - The Strengths, Weaknesses, Opportunities and Threats tool helps planners be realistic about what they can achieve, and where they should focus. Context Assessment: SWOT Analysis - Toolkits

For examples of contingency/response plans:

- IOM (website) Emergency Preparedness (EP) Dashboard
  - Provides information on operational support needs, inter-agency partnerships, knowledge management and reporting on emergency preparedness at IOM. IOM Emergency Preparedness Dashboard (Ongoing Version) - Power BI
- IOM (website) Global Crisis Response Platform (GCRP)
  - Presents an overview of IOM's immediate and longer-term planning and funding requirements to respond to the evolving needs of those impacted by, or at risk of, crises and displacement, On the GCRP Home Page-Dashboard tab, you can filter Disaster Prevention and Preparedness activities to see what other COs DP (Disaster Preparedness) activities are and documents from their preparedness projects. Home | Global Crisis Response Platform
- IOM (2021) IOM Chad Multi-Risk Contingency Plan
  - IOM Chad's multi-risk contingency plan as an example for other COs completing contingency/response plans. TCD Multi-Risk Contingency Plan
- IOM (2021) Zimbabwe Emergency Preparedness Contingency Plan
  - IOM Zimbabwe's contingency plan as an example for other COs completing contingency/response plans. IOM Zimbabwe Draft EP Contingency Plan 25102021 - Updated

For additional guidance on engaging local actors in planning:

  - Guides users who are planning project activities to enhance engagement from a wide range of local stakeholders. IOM Migration and Sustainable Development (M&SD) - Strengthening Engagement with Local Actors, Toolkit for IOM Staff - 24 July

SECTION 3.3

EMERGENCY PREPAREDNESS COMPONENTS

EMERGENCY SERVICES/RESPONSE MECHANISMS AND STRATEGIES

© IOM 2022

3.3. INTRODUCTION - EMERGENCY SERVICES/RESPONSE MECHANISMS AND STRATEGIES

3.3.1. Purpose

This component of the toolkit prepares you to contribute to emergency services, response mechanisms, and strategies.

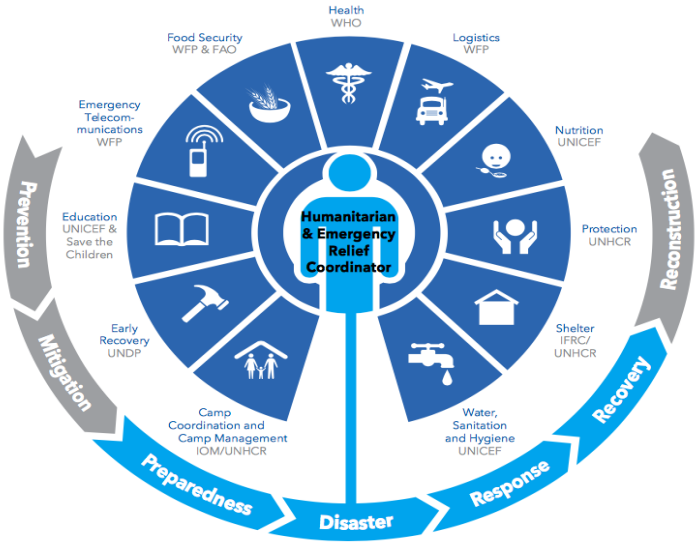

3.3.2. Overview

This toolkit section focuses on the steps the IOM Country Office (CO) needs to take once a disaster strikes or if there is an impending disaster. Ideally in this situation your CO has already developed an internal contingency plan and contributed to joint inter-agency ones in coordination with the government.

The IOM Contingency Plan template includes a planning overview part that could be used as a "draft emergency proposal" ready to be activated for a response. With any impending or current disaster situation, you will always have to re-evaluate and verify your previously made plans and strategies against the reality of the disaster context and situation. For more information on preparing for disasters, see component 3.01 Risk Analysis and component 3.02 Preparedness and Contingency/Response Planning of this toolkit.

Any response will need to consider the nature and magnitude of the hazard event, but it is likely the following types of emergency services will be needed: evacuation procedures, search and rescue, assessment teams, distribution of NFI/equipment, relief stocks and distribution, open spaces/emergency shelter, emergency or mobile hospital facilities, preparations for emergency reception centres and shelters, food security etc.[15] The Inter-Agency Standing Committee (IASC) cluster approach demonstrates the sectors that may be required in a typical emergency response. See the graphic below for an example of cluster/sectors that are typical in an emergency response.

IASC cluster approach[16]:

It is important to note that the timeframe to develop and submit a proposal for emergency response projects is usually very short compared to non-emergency contexts. This is primarily because interventions need to be implemented immediately to provide lifesaving assistance to the affected populations. In addition to this, there is usually extremely limited information available, particularly at the onset of the emergency, which can be used for needs analysis.

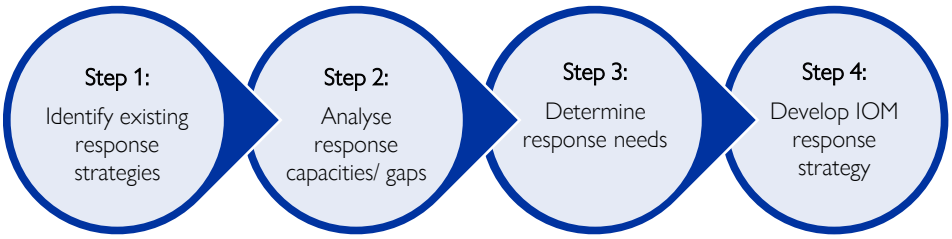

3.3.3. Why is it important?

- During an actual emergency, quick and effective response is required to save the most lives and reduce disaster impacts.
- Developing emergency services and response mechanisms and strategies enables IOM to respond to assessed needs in an emergency and serve as a basis for implementing and monitoring emergency response.
- Developing overall strategies, policies, and proposals in an efficient and timely manner is essential to setting up and expanding IOM's emergency operations in response to crises.

[15] IOM (2020) An Introduction to Emergency Preparedness Self-Study

[16] Image Source: IASC Reference Module for Cluster Coordination at the Country Level, p 2,

3.3.4. OVERVIEW OF STEPS

Step 1: Identify existing emergency response mechanisms, strategies, and plans

For this step, you need to confirm what response mechanisms, disaster strategies, and plans were in place in relation to the impending/current disaster situation. If you are unable to access this information, proceed to the next step.

1.1 Identify the national response strategies and plans

Unless you already have access to the national disaster response strategies and plans for the country you are working in, you will need to locate the latest version available. A first place to find them is Tool 1 – PreventionWeb – National Platforms in the Key Tools & Resources section below. If the country in which you are operating participates in international Disaster Risk Reduction (DRR) forums, they will likely share their national response strategies/plans via this platform.

If there is no information on PreventionWeb – National Platforms, try accessing the information either from other UN (United Nations) agencies or directly from the National Disaster Management Agency or the Department of Civil Defence or equivalent. You may also find it useful to contact local authorities who would hold this information.

1.2. Gather pre-existing risk-specific joint contingency/response plans, if applicable

Where your Country Office (CO) has participated in joint contingency/response planning with government and other partners, this will serve as your starting point for developing IOM's response strategy and plans in the impending/current disaster. Typically, contingency/response plans include risk scenarios and information on response & operational capacity, preparedness gaps and obstacles and response plans for specified medium to high risks in the country.

For guidance and information on contingency/response planning, see EP (Emergency Preparedness) Toolkit component 3.02 Preparedness and Contingency/Response Planning and Tool 2 – IOM Emergency Preparedness Guidance (See link in Key Tools & Resources section below.).

Step 2: Analyse response capacities/gaps in the current emergency

For this step, consider the response mechanisms, strategies, and plans in the previous step and verify if and how they are being carried out and where there are residual gaps in the humanitarian response.

2.1. Monitor information on the current emergency situation and response

There are some useful questions for monitoring disaster situations on pages 9-10 in the IOM Emergency Preparedness Guidance – Annex 3. See Key Tools & Resources section below for the link.

In the earliest stage possible after disaster strikes rapid assessments are a key resource for informing decisions on how IOM can contribute to the response.

Recommended resources for analysing emergency response capacity[i]

Category	Description	Examples
Inter-Agency/ Inter-Sectoral Assessments	Coordinated assessments carried out in partnership with all humanitarian actors to assess the humanitarian situation	Multi-Sector Initial Rapid Assessment (MIRA), Post Disaster Needs Assessment (PDNA) 4W or 5W for geographical presence
Cluster / Sectoral Assessments	Cluster or sectoral assessments are more in-depth assessments of a specific cluster or sector. They can be carried out by several agencies but focused on one sector	Child Protection Rapid Assessment (CPRA)

Agency-Specific Assessments	Assessments carried out by a single agency. Ideally, this should only be done when an agency needs to understand a specific issue that is not captured in inter-agency or cluster assessments. For example: IOM may carry out assessments to better understand the needs and gaps of migrants caught in crisis as this specific caseload may not be captured in cluster assessments.	IOM assessments of migrants caught in a crisis
Displacement Tracking Matrix (DTM)	The DTM is useful for providing project baselines, such as the total number of displaced persons in an area and the main sector-specific gaps that need to be addressed.	DTM Integrated Location Assessment (ILA)

For detailed information on the above-listed assessments and others, see Tool 3 - IOM Emergency Manual – Assessments & Emergencies in the Key Tools & Resources section below.

2.2. Determine the government's capacities and gaps in the current response

The assessments listed above will help you to analyse the government's capacity to meet the humanitarian needs during response and any gaps in services where the government may need additional support from international partners.

You also need to participate in the existing coordination mechanism to receive regular updates and to determine the capacity of government to respond to the disaster.

2.3. Determine what other partners are planning and doing in the current disaster response

Other partners would include the community and civil society response and other national and international partners. Where there is an existing cluster/sector coordination system, ensure that IOM is fully represented through the CCCM (Camp Coordination and Camp Management) cluster and other related clusters/sectors.

Monitoring the response from other partners through the coordination system will help to identify who is doing what where and any gaps in humanitarian assistance for disaster-affected people and migrants in the crisis situation. It is essential to keep yourself updated continuously in the initial stages of the disaster as the situation is highly dynamic. For more information on coordination, see EP Toolkit component 3.05 Coordination.

Step 3: Determine the government's position regarding support from partners

Where the cluster/sector coordination system is in place, you need to participate in coordination meetings and identify if and how government has invited or requested support from the international community. The Humanitarian Country Team (HCT) or the United Nations Country Team (UNCT) will coordinate directly with government and communicate the agreement for support from the international community through the cluster/sector mechanism.

In most countries there are sub-national coordination mechanisms, especially in countries where clusters/ sectors are active. Where coordination between the government representatives and the international humanitarian community is limited, it may also be appropriate for IOM to initiate communication directly with government representatives at local disaster management offices to understand if and how the government would like to be supported during humanitarian response.

Remember that international partners may offer assistance, but it is the government that holds the primary duty for delivering humanitarian assistance in a disaster.

Step 4: Develop IOM emergency response strategy and plans

4.1. Define the IOM emergency response strategy

Humanitarian response planning helps the humanitarian community respond more effectively to the needs of people affected by a crisis – to focus activities and resources, to ensure that organizations are working toward the same goals, and to assess and adjust the humanitarian community's response to a changing environment.

The process is "strategic" because it involves being clear about the overall objectives, being aware of the resources and capacity, and incorporating both into being responsive to a dynamic environment. The decisions made in response planning shape and guide the collective response. Response planning involves setting strategic objectives, activity-based costing, developing an approach to achieve those objectives, and making sure roles and responsibilities are clear. As it is impossible to do everything that needs to be done immediately, response planning requires prioritization of most critical actions. Much of the "strategy" lies in making the tough decisions about what is critical to do and how to do it.[ii] Humanitarian response plans are regularly revised (e.g., every 6 months) to bring more details and structures after the initial emergency response.

For more information on strategic response planning, see Humanitarian Programme Cycle: Reference Module - in the Tools & Resources section below.

4.2. Develop IOM emergency operations projects/plans

The majority of IOM's budget comes from donor-funded projects. Projects are composed of a set of activities that aim to address a specific set of needs and deliver specific results. Projects are time-bound and include specific budgets to support the implementation of each activity. At the onset of a crisis, IOM may need to develop and submit several projects to different donors all within an extremely limited timeframe[17].

Where inter-agency contingency/response planning were carried out prior to the disaster, developing a response strategy is done by transforming the contingency plan to a flash appeal considering the most recent needs assessment reports.

The primary tool for developing emergency projects is the IOM Emergency Manual chapter on Project Development in Emergencies which provides comprehensive guidance on the process of developing emergency projects. (See link to IOM Emergency Manual in the Key Tools & Resources section below.)

Depending on the scale of the emergency, the IASC might declare an IASC Scale-Up Emergency. IOM has similar internal mechanism to ensure an appropriate humanitarian response. This includes specific procedures for endorsement, clearance, etc.

3.3.5. ROLES AND RESPONSIBILITIES

- Government role

The government, typically the Department of Civil Protection, is the primary entity and duty bearer for emergency response at national and local levels. The government has responsibility to define national and local disaster response strategies, policies and procedures. They have primary responsibility to implement emergency services to meet the needs of people affected crisis on their territory. Further, the government's role is to have response mechanisms and strategies in place for when a crisis occurs. When the government requires external support, they may invite IOM, partners and other stakeholders to contribute to the emergency response. Partners and inter-agency role

- UN and international partners' role

The UN and other international and local partners can offer to support the efforts of government in emergency response. Depending on the context, partners will engage in emergency response through the cluster/sector coordination system. It is the responsibility of partners to ensure that response endeavors are closely coordinated with government and aligned to national plans and priorities. Ideally the government and partners will create joint emergency response strategies/plans to ensure close coordination and promote speedy response.

- IOM role

The IOM CO should gather and analyse information on the current emergency context and response capacity of government as an immediate part of emergency response. Where there are humanitarian needs and gaps in the response, IOM may identify a response strategy and emergency project plans to address them to ensure the needs of disaster-affected populations are met.

3.3.6. KEY MESSAGES

1. IOM can play a vital role in supporting government crisis response by addressing any gaps in humanitarian services for migrants and other disaster-affected people.
2. Response mechanisms and strategies would ideally be planned before a disaster strikes through contingency/response planning and then updated and refined when disaster strikes. The emergency focal point will normally coordinate with government officials and international and local stakeholders to disaster response to develop response strategies and plans.
3. Engaging with and aligning to national government disaster response strategies and plans and working in coordination and collaboration with inter-agency partners in the response are key to the success of the intervention.

3.3.7. KEY TOOLS & RESOURCES

TOOL 1 – PreventionWeb (website) National Platforms

- Provides declared national coordinating multi-sectoral and inter-disciplinary mechanisms for advocacy, coordination, analysis and advice on DRR. Preventionweb - Continents & Countries

TOOL 2 – IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM

- Provides information on how to conduct risk analysis and monitoring and the minimum preparedness actions checklist. IOM Emergency Preparedness | Guidance
- Annex 3 provides information on how to complete the contingency response plan and the Contingency Plan template. IOM EP Guidance Note_Annex3_Contingency Plan Template - V_1.1

TOOL 3 – IOM (website) IOM Emergency Manual

- Assessments in Emergencies:
    - Provides an overview of assessments in emergencies and details on several types of emergency assessments. Assessments in Emergencies | Emergency Manual
- Project Development in Emergencies
    - Provides comprehensive guidance on the process of developing emergency projects. Project Development in Emergencies

3.3.8. ADDITIONAL TOOLS & RESOURCES

- IASC (2015) Humanitarian Programme Cycle: Reference Module
    - Provides an overview of what needs to be done, when and by whom in coordinated humanitarian action to enable managers to allocate staff and tasks, sequence decisions and planning, and identify priorities. IASC Reference Module for the Implementation of the Humanitarian Programme Cycle

SECTION 3.4

EMERGENCY PREPAREDNESS COMPONENTS

RESOURCE ALLOCATION AND FUNDING MECHANISMS

© IOM 2022

3.4. INTRODUCTION - RESOURCE ALLOCATION AND FUNDING MECHANISMS

3.4.1. Purpose

This component of the toolkit prepares you to mobilize resources for emergency preparedness and response and to engage with donors in your country context.

3.4.2. Overview

Resource allocation and funding mechanisms form part of the Resource Mobilization stage of the Humanitarian Programme Cycle (HPC)[18]. The Humanitarian Programme Cycle approach includes inter-agency fundraising where the humanitarian community develops a collective response plan to address the most urgent needs of the population affected by crisis. Funding mechanisms can be in the form of a Humanitarian Response Plan (HRP), a Flash Appeal, Refugee Response Plan, Migrant Response Plan for Refugees or Migrant Response Plan, among others. Resource mobilization may also include direct submissions to the donors or responding to a call for proposals. Resource mobilization is a process typically led by the Humanitarian Country Team (HCT) that is sequential and seeks to achieve strategic coordinated evidence-based humanitarian action.[19]

Resource mobilization includes both direct financial contributions and/or in-kind contributions including goods, personnel support, or provision of services. It also involves establishing valuable contacts and networks with donors, building trust, and earning the support and in-kind contributions of donors. Tapping into funding opportunities for preparedness and response requires that the Country Office (CO) focal point be familiar with what these opportunities are; for what these funds can be used; and their eligibility requirements.

You will need to complete the steps in components 3.01 Risk Analysis, 3.02 Preparedness and Contingency/Response Planning prior to implementing the steps in this component.

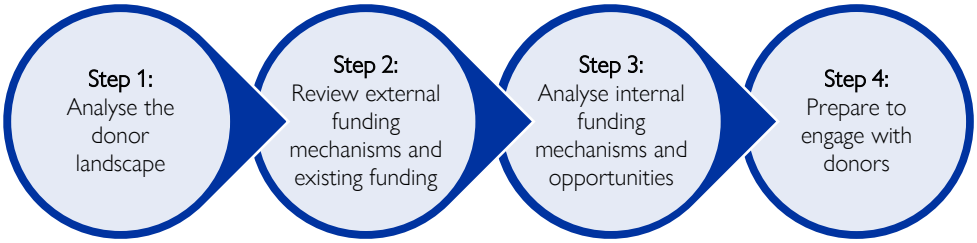

3.4.3. Why is it important?

- Resource mobilization is critical because it ensures that IOM can meet its mandate, continuously improve services and scale-up programs for migrants and crisis-affected people, as needed.
- For IOM to support robust disaster preparedness and response, it must be adequately resourced and funded[20].
- For IOM and the donors who fund them, investing more on preparedness pays off as it can also increase the value for money of relief action and ensure that scarce resources are directed to where they will have the greatest impact[21].

[18] IASC (2015) Humanitarian Programme Cycle: Reference Module – Resource Mobilization (p. 11)
[19] IOM (2016) IOM Resource Mobilization Guidebook. (p. 25)
[20] IOM (2022) Emergency Preparedness Training – Resource Mobilization
[21] Based on IOM (2020) IOM Introduction to Emergency Preparedness. (p. 4)

3.4.4. OVERVIEW OF STEPS

Step 1: Analyse the donor landscape

The donor landscape is comprised of elements related to resource mobilization including opportunities and relationships at the country level that IOM should target and establish in advance of a disaster or a major crisis to increase the organization's visibility and potential future funding to support this area of work.

In line with current United Nations (UN) reforms, diversifying the range of donors IOM receives support from –whether in the form of direct financial contributions or resources – will be essential for IOM country offices[22].

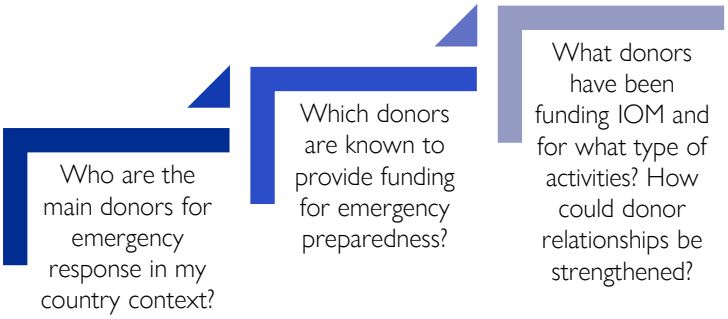

1.1. Gather information on preparedness and response needs

Before analysing the donor landscape, review existing information on funding and resource allocation needs in the country context related to disaster preparedness and response. The information may come from risk analysis reports, contingency plans for different risks and/or needs assessments completed previously. This information will help you to focus your research on the donor landscape keeping in mind the types of projects and activities you will need to find funding and resources for.

1.2. Perform a funding analysis to identify donors in your country context[23]

Conduct desk research to establish/confirm your understanding of donors that are active in your country context for both humanitarian response and for disaster preparedness projects and activities.

Key questions for analyzing the donor landscape[24]

The Regional Office (RO) Regional Thematic Specialists (RTS) (Department of Operations and Emergencies (DOE) for Emergency Preparedness & MECR for Disaster Risk Reduction (DRR)) can support you with donor profiles or other countries examples, as well as the Donor Relations Division (DRD) can help you for questions relating to donor liaison with traditional and non-traditional donors, including the private sector.

See DRD's IOM's Donor Profiles folder in the DRD SharePoint Site to identify the most relevant active or potential donors in your context. You can find a repository of resources on IOM's donors on the Donor Relations Division SharePoint site (See Tool 1 – Donor Relations and Resource Mobilization SharePoint site in the Key Tools & Resources section below.). In coordination with DOE RTS and relevant Head Quarters (HQ) divisions, DRD can provide guidance, tools, and funding analyses to identify donor priorities and trends and match them with ongoing and future IOM programmes.

---

[22] IOM (2016) IOM Resource Mobilization Guidebook. (p. 4)
[23] Corresponds to Minimum Preparedness Actions Checklist, Item 8.2.
[24] Based on DG ECHO (2021) DG ECHO Guidance Note: Disaster Preparedness

You can also use financial tracking system (FTS) data and OECD-DAC[25] data to see who the biggest donors are for your country and compare that to who the main donors to your IOM mission have been in the last years.

1.3. Identify donors in your country context with preparedness in their strategies

Some bilateral donors have incorporated preparedness into their strategies. Therefore, look for opportunities to engage with them to help them understand what IOM is doing in terms of preparedness activities.

Some bilateral donors that are strong in providing support to disaster preparedness are listed below (non-exhaustive list).

Bilateral donors with commitment to disaster preparedness

Country/Region	Agency
Australia	Department of Foreign Affairs and Trade (DFAT)
Canada	Canadian International Development Agency (CIDA)
Europe	European Community Humanitarian Office (ECHO)
Germany	German Federal Foreign Office (GFFO)
Japan	Japan International Cooperation Agency (JICA)
United Kingdom	Foreign Commonwealth and Development Office (FCDO)
United States	Bureau for Humanitarian Assistance (BHA)

IOM's Programme Support Unit can be of assistance as they are involved in all project proposal development and resource mobilisation. They work on all sorts of programmes from preparedness to response.

Step 2: Review external funding mechanisms and existing funding

Having a solid understanding of the various funding mechanisms will help you to identify opportunities to access funding and resourc es, as needed.

2.1. Confirm your understanding of external funding mechanisms available in your country context

Below is a list of the key external funding mechanisms you should be familiar with including information on when they can be accessed.

External funding resources, mechanisms, and tools

Funding Mechanism & Resources mobilization tools	Brief Description
Anticipatory Actions Funding (Funding mechanism)	Some organizations are increasingly using data to provide funding for early action to help preparedness for disasters by using evidence of risk in place of evidence of needs. Using forecast information, data, and risk analysis, humanitarian funding can be released for pre-agreed activities when a specific threshold is reached. To be noted, there is no agreed upon definition around Anticipatory Actions (AAs). Some stakeholders (International Federation of the Red Cross (IFRC), European Community Humanitarian Office (ECHO) are using it interchangeably with *Early Actions* and it also includes 'traditional' preparedness activities. In parallel, the Office for Coordination of Humanitarian Affairs (OCHA) piloted a specific model in a few countries. These OCHA-AA models focus on 1 or two risks only, using a scientific forecasting model, and an agreed-upon workplan between selected UN agencies (not non-government organizations (NGOs)). Only with these criteria in mind some pre-allocated Central Emergency Response Fund (CERF) money could be allocated to Anticipatory Actions.
Central Emergency Response Fund (CERF)	Managed by OCHA, CERF provides seed funds to jump-start critical relief operations and fund life-saving programmes not covered by other donors.
Country-based Pooled Funds (CBPFs) (Funding mechanism)	Established when a new emergency occurs or when an existing crisis deteriorates, CBPFs are managed by OCHA under the leadership of the Humanitarian Coordinator and in consultation with the HCT.
Flash Appeal (Fundraising tool)	Developed in collaboration with other UN agencies and partners, flash appeals present an early response plan and specific projects at the onset of an emergency lasting up to six months.

[25] The Organization for Economic Cooperation and Development (OECD) - Development Assistance Committee DAC sets international principles and standards for development co-operation, and monitors how donors deliver on their commitments.

	Contingency plans are designed so that they can be transformed easily into a Flash Appeal when needed.
Humanitarian Response Plan (HRP) (Fundraising tool)	When more than one agency is required to respond to a crisis, an HRP articulates the agencies' shared vision of how to respond and required financing once the needs of the affected population have been assessed. It is a key step in the HPC and is done annually.

You can find links to guidance and templates for each of these funding mechanisms in the Additional Tools & Resources section below.

2.2. Analyse your CO's funding for response and preparedness needs from external sources

Use the CO's Finanancial Tracking System (FTS) to help you quickly identify what funding is available for your priority projectized activities and what are the gaps.

It is good practice to check whether any existing response funding and/or resources could be better used by reallocating them to disaster preparedness activities. Preparedness activities can improve speed, volume, and quality of emergency response to reduce humanitarian impacts and losses. Remember emergency preparedness can also help the CO to identify and address gaps in advance of a crisis and position IOM as a vital emergency responder[26]. Remember as well that there is often overlap between DRR activities and Emergency Preparedness (EP) activities. These are often complementary so overall Preparedness funding should consider both the long-term preparedness (DRR) and short-term preparedness (EP) not in silos, but very much as one effort when engaging with donors (see IOM Global Crisis Response Plan (GCRP) Objective 3 below).

Step 3: Analyse internal funding mechanisms and opportunities

Now that you have looked at existing external funding compared with disaster response and preparedness needs, it is time to explore internal IOM funding opportunities.

3.1. Confirm understanding of the key internal funding mechanisms

For this step, compare the preparedness and response needs to internal IOM funds that can be accessed for preparedness and response activities.

IOM internal resource mobilization tools and funding mechanisms[27]

Funding Mechanism & Resources mobilization tools	Brief Description
Global Crisis Response Platform (GCRP) (Fundraising tool)	The GCRP is IOM's primary tool for resource mobilization for fragile and crisis contexts and is relied upon by several of IOM's main donors when making funding decisions (for example, Canada and the United States).[iii] The GCRP supports both disaster preparedness and response activities.
Migration Emergency Funding Mechanisms (MEFM) (Funding mechanism)	MEFM enables IOM to provide internal loans to COs to bridge the funding gap between the onset of an emergency and the receipt of donor funding. It enables early assessments to be conducted on the ground and very quick response times for providing initial assistance.
Rapid Response Fund (RRF) (Funding mechanism)	IOM establishes this fast and flexible funding mechanism for rapid delivery of life-saving responses to critical humanitarian needs through support to international and national non-government organizations.

For further information on each of the funding mechanisms above and more, see Tool 2 - IOM Resource Mobilization Guidebook under Key Tools & Resources below.

3.2. Analyse your CO's funding for response and preparedness needs from internal sources

Check the status of your CO around options to access funding from any of the internal funding mechanisms listed in the table above.

Analyse opportunities to match internal funding mechanisms to the preparedness and response needs you have identified previously from risk analysis, contingency plans or needs assessments.

To finish this step, make conclusions about whether the preparedness or response needs you identified could be fully or partially addressed with internal funding mechanisms and what are the remaining gaps in funding.

[26] IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM (and MPA checklist item 8.3)

[27] From IOM (2016) IOM Resource Mobilization Guidebook. (p. 22)

Step 4: Prepare to engage with donors

Leading up to and during a humanitarian crisis, there are several actions you can take to strategically position your CO for donor engagement. The main tool you can use for this is Tool 3 - Resource Mobilization Checklist During Crisis in the Key Tools & Resources section below.

4.1. Familiarise yourself with donor strategies and priorities

Remember that RO and HQ divisions can provide guidance, tools, and funding analyses to identify donor priorities and trends and match them with ongoing and future IOM programmes.

It is important for you to be able to take a tailored approach to donor relationships. Not all issues are of interest to every donor. Do your research and make sure you know the aims and priority areas of the donors you are approaching[28].

Remember that many bilateral donors have committed to different frameworks, which could be useful to reference in project proposals. Two of the main frameworks include:

- Good Humanitarian Donorship: In 2003, 17 donors adopted the 23 Principles and Good Practice of Humanitarian Donorship, with a 24th principle on the use of cash transfers added in 2018. There are now 42 GHD members that join together to encourage more effective and principled donor behaviour, which can lead to improved humanitarian action.
- The Grand Bargain: Adopted at the World Humanitarian Summit in 2016, Member States and humanitarian organizations adopted this quid pro quo document focused on making improvements across 10 major areas affecting humanitarian response. Ahead of the 2021 Grand Bargain Annual Meeting, 63 signatories (comprising States, international organisations, NGOs, Red Cross/Red Crescent Movement, and UN agencies) adopted the Grand Bargain 2.0. The overall objective of the Grand Bargain 2.0 is to achieve "Better humanitarian outcomes for affected populations through enhanced efficiency, effectiveness, and greater accountability, in the spirit of Quid pro Quo as relevant to all."

See the Additional Tools & Resources section below for links to these frameworks which will indicate which donors have committed to them.

4.2. Develop/Maintain IOM agency-specific plans aligning to country and global level plans[29]

As a complement to, and aligned with, the contingency plan (and HRP and Flash Appeals when they exist), IOM should develop when relevant its own agency-specific Crisis Response Plan (CRP) and flash appeal, explaining the IOM activities, along with related funding requirements.

Where they exist the IOM CRP and the IOM Flash Appeal are the primary management and resource mobilization tools used by IOM to communicate the scope and strategy in response to a humanitarian crisis. CRPs lay out what IOM plans to do in one year in one country, which provides a "taster" for donors of what IOM intends to do.

All CRPs and Flash Appeals are published on the GCRP. More up-to-date funding information is available on PRIMA and PRIMA includes all humanitarian activities.

IOM's GCRP provides donors and partners with an overview of IOM's immediate and longer-term planning and funding requirements to respond to the evolving needs of those impacted by, or at risk of, crises and displacement. The GCRP platform allows donors to see what preparedness, response, or transition activities IOM intends to carry out.

4.3. Analyse the CO's capacity for accessing funding and diversifying funding sources

For this activity you could work with a few relevant colleagues to strategize about how to expand the number and types of donors your CO works with. First, share your findings from Steps 1-3 so all those participating in the discussion have a common knowledge base.

Now consider what IOM's capacity is to apply for and achieve funding by asking yourself or a small group of colleagues:

- What are the COs capacities in terms of applying for funding and managing donor relationships?
- What are opportunities to diversify sources of funding and resource allocation?
- How can we improve our visibility with new and existing donors?
- When, how and with whom should we position ourselves to secure preparedness funding and response funding?

As a result of the discussion, draw some conclusions about the COs capacity strategically engaging donors and actions required to improve capacity.

---

[28] From IOM (2016) IOM Resource Mobilization Guidebook. (p. 22)

[29] Ibid

In addition, create a donor engagement plan that specifies individual donors to engage with and how considering the identified needs for preparedness and response in the country and the donors' priorities and commitments.

4.4. Engage with donors and build support for IOM response and preparedness activities

You can engage with donors when you have a good understanding of the donors operating in your country context, their priorities, and commitments to frameworks as well as funding opportunities within IOM.

Implement your plan for engaging individual donors to meet preparedness and response needs by following the plan you created and monitoring and adjusting activities as needed in the changing context

3.4.5. ROLES AND RESPONSIBILITIES

- ### Government role

Some governments may fund IOM directly for carrying out plans defined in the HRP or other specific agreed activities.

- ### Partners and inter-agency role

Emergency Preparedness resource mobilization is led by the Resident Coordinator and/or Humanitarian Coordinator, coordinated by OCHA if present and supported by the UN Country Team or HCT, the inter-cluster coordination group and clusters/sectors. The national authorities should be consulted and included in the process as appropriate.

- ### IOM role

The CO's role in Resource Mobilization is to systematically analyse the donor landscape to understand what donors are present in the country context and the internal and external funding and resource allocation opportunities there are in the current context. COs should strategically engage donors before and after a crisis to ensure that preparedness and response needs are met. All organizations are expected to regularly inform the Financial Tracking Service of any new funding, including internal allocations or the use of private funds.

3.4.6. KEY MESSAGES

1. For IOM to support robust disaster preparedness and response, it must be adequately resourced and funded.
2. Resource mobilization can take place at any time throughout the Humanitarian Programme Cycle or in development context. It involves participating in collective funding appeals through inter-agency funding mechanisms and engaging with donors.
3. A solid understanding of the donor landscape and internal and external funding opportunities prepare you to strategically seek resource allocation and funding. Key to your CO's ability to attracting donor funding is establishing valuable contacts and networks with donors, building trust, and earning the support and in-kind contributions of donors both pre-crisis and post crisis.

3.4.7. KEY TOOLS & RESOURCES

TOOL 1 – IOM (website) Donor Relations and Resource Mobilization

- From the Donor Relations Division, this SharePoint resource provides donor profiles and funding histories and information on funding opportunities. Donor Relations and Resource Mobilization - Home

TOOL 2 – IOM (2016) IOM Resource Mobilization Guidebook

- Provides a comprehensive overview of IOM's donors and resource types and shares useful resource mobilization practices of IOM staff from country offices. Resource Mobilization Guidebook

TOOL 3 – IOM (2020) Donor Relations/Resource Mobilization Checklist During a Crisis

- Provides a practical checklist of actions to take to engage donors and mobilise resources during a crisis. Resource Mobilization Checklist During Crises

3.4.8. ADDITIONAL TOOLS & RESOURCES

- Inter-Agency Standing Committee (IASC) (2015) Humanitarian Programme Cycle: Reference Module – Resource Mobilization
    - Provides an overview of what needs to be done, when and by whom in coordinated humanitarian action for making decisions, planning, and identifying priorities. IASC Reference Module for the Implementation of the Humanitarian Programme Cycle

For external funding mechanisms:

- Office for Coordination of Humanitarian Affairs (OCHA) (website) Anticipatory Action Toolkit
    - This online toolkit offers practical guidance to OCHA staff in the field on how to build an anticipatory action framework.
- United Nations (UN) (website) Central Emergency Relief Fund (CERF) Guidance and Templates
    - Presents various guidance and templates that are needed for the CERF process. CERF Guidance & Templates
- IOM (2020) CERF - Updated Funding Alert
    - Aims to assist in aligning IOM proposals with CERF guidelines and principles and provides guidance on compliance with CERF implementation. CERF Guidelines and Principles
- OCHA (website) Country-Based Pooled Funds (CBPF) Resources
    - Contains resources including a fact sheet, policy instruction, operational handbook, and guidelines on CBPFs. CBPF Guidelines | OCHA
- OCHA (website) Flash Appeal Guidance and Templates
    - Presents various guidance and templates that are needed for the CERF process. Flash Appeal guidance and templates | HumanitarianResponse
- European Community Humanitarian Office (ECHO) (website) Policies and Guidelines
    - Provides policy guidelines and information on engaging with ECHO in the field, ECHO indicators, quality markers and remote management. Policies and Guidelines

For more information on donor frameworks:

- The Good Humanitarian Donorship (GHD) Initiative (website)
    - Provides a description of the initiative, a list of members, best practices, principles and resources for guiding donors and their implementing partners. Good Humanitarian Donorship
- IASC (website) The Grand Bargain
    - Contains information and updates on progress for this initiative to get more means into the hands of people in need to improve humanitarian action. IASC - The Grand Bargain

For more information on internal funding mechanisms:

- IOM Emergency Manual (website)
    - Provides overviews, descriptions, and further resources on funding types:
        - Home Page | Emergency Manual
        - Rapid Response Fund (RRF) | Emergency Manual
        - Global Crisis Response Platform (GCRP)
- Migration Emergency Funding Mechanism (MEFM)
    - Contains statement on the purpose and structure of the MEFM, an internal loan mechanism to facilitate quick access to emergency funding. Migration Emergency Funding Mechanism
- IOM (N/D) Project Information Management Application (PRIMA)
    - Provides instruction on how to use the PRIMA for developing, managing, and reporting on IDF (IOM Development Fund) projects and the Fund as a whole. IOM - PRIMA

SECTION 3.5

EMERGENCY PREPAREDNESS COMPONENTS

COORDINATION

© IOM 2023

3.5. INTRODUCTION - COORDINATION

3.5.1. Purpose

This component of the toolkit prepares you to participate and lead in country and field-level coordination before and during a crisis.

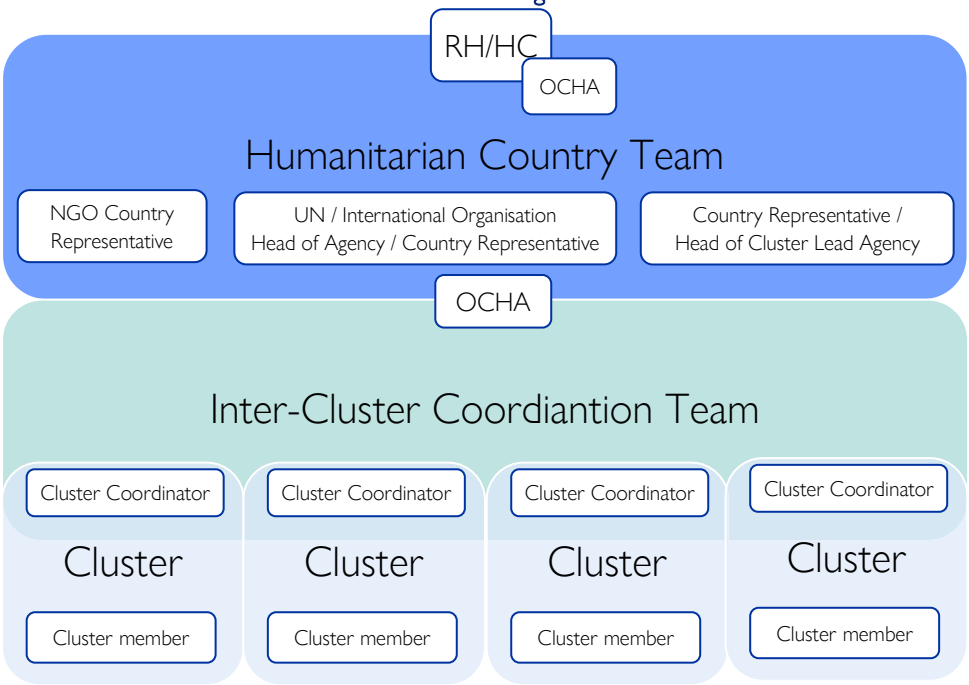

3.5.2. Overview

Coordination in a humanitarian response aims to improve the efficiency of the provision of aid, maximize resources, and reduce duplication and inefficiency in service delivery[30]. IOM's plans ideally should be coordinated with the plans and intentions of other agencies and organisations, including the United Nations, the government, and the communities in which IOM works with[31]. In this component, the focus is on humanitarian situations (when there is a Humanitarian Country Team (HCT) in addition to the traditional United Nations Country Team (UNCT)

Effective disaster response requires mutual trust and coordination of efforts and resources among the many agencies and people involved in emergency response—including the affected local population and local community-based organisations, relevant ministries, Civil Defence and government emergency structures, Red Crescent/Red Cross Societies, international agencies, NGOs and others[32].

Representatives of various agencies working in one sector (CCCM, shelter, health,) may organise sub-groups or systems. The Inter-Agency Standing Committee (IASC) cluster approach is one example of pre-existing coordination arrangements.

IASC cluster coordination structure at the national level in humanitarian settings:

The principal objective of international humanitarian action, and the purpose of coordination, is to meet the needs of affected people by means that are reliable, effective, inclusive, and respect humanitarian principles.

3.5.3. Why is it important?

- Experience has shown that coordination is essential to ensure effective response, address gaps and avoid confusion and overlap[33].
- Coordination ensures a more coherent and principled response to emergencies and is key to IOM's effectiveness, positioning, and leadership in disaster and humanitarian emergency response[34].
  The principal objective of international humanitarian action, and the purpose of coordination, is to meet the needs of affected people by means that are reliable, effective, inclusive, and respect humanitarian principles.

[30] IOM Emergency Preparedness Training – Inter-Agency Coordination
[31] IOM (2020) IOM Introduction to Emergency Preparedness. (pg 12-13)
[32] Ibid
[33] IOM (2020) IOM Introduction to Emergency Preparedness. (p. 12-13)
[34] Emergency Preparedness Training – Inter-Agency Coordination

3.5.4. OVERVIEW OF STEPS:

The steps for coordination are organised according to steps that should be taken pre-crisis and post-crisis. It is ideal to address Steps 1 and 2 pre-crisis. However, if you are already in an immediate post crisis situation, you can focus on Steps 3 and 4 before proceeding to Steps 1 and 2 (to prepare for potential new risks for instance).

Step 1: Analyse pre-crisis coordination and management arrangements

It is important to be aware of the status of pre-crisis coordination structures. If these structures are expected to continue to operate for a major disaster, IOM should continue to participate in these platforms. Where these structures are temporarily suspended or adjusted, IOM should keep in touch with meeting conveners to ensure that IOM can participate in the platforms once they resume. Staying engaged in pre-crisis coordination structures will enable IOM to strategically position itself to respond during the crisis and to transition out of the emergency phase once the conditions in the country allow for longer term programming to resume[35].

1.1. Identify the pre-crisis coordination and management arrangements for disaster response

Depending on your country context and the current disaster situation, there may be different coordination structures used or a hybrid of different structures. It is important for you to be able to identify what coordination structure is in use and what are the responsibilities and activities of the IOM CO so you can coordinate effectively.

Coordination management arrangements for disaster response:

Pre-Crisis Coordination	Humanitarian Coordination Structure	Coordination in Mixed Situations and Refugee Response
• Led by national/local authorities • Inter-agency supports the government (Resident Coordinator (RC) or Office for the Coordination of Humanitarian Affairs (OCHA) leading)	Led by the Humanitarian Coordinator (HC) and HCT, key coordination role of OCHA	• Shared leadership through United Nations High Commissioner for Refugees (UNHCR) and OCHA. • Used when there are refugees and internally displaced persons (IDPs) affected by crisis.

To find out more about these humanitarian coordination structures and the roles and responsibilities of different stakeholders under these structures, see Tool 1 – IOM Emergency Manual – Coordination in Different Contexts in the Key Tools & Resources section below.

1.2. Identify the preparedness coordination and management arrangements

Many countries have established national platforms for disaster risk reduction (DRR). These platforms are a nationally owned and nationally led forums or committees for advocacy, coordination, analysis, and advice on disaster risk reduction. One of the goals of these national platforms is to foster partnerships and an environment for developing a culture of preparedness and advocacy for disaster resilient communities. These platforms offer IOM another entry point for engaging with other national and international actors involved in DRR and emergency preparedness (EP)[36]. To find out more about DRR platforms in your country context, see the link to the PreventionWeb's National Platforms for DRR in the Additional Tools & Resources section below. On this site, you can find country-level information on DRR forums and coordination mechanisms. You may also check locally whether there are existing IASC sub-working groups on Early Warning and Early Action.

[35] IOM (2022) IOM Emergency Manual
[36] IOM Emergency Preparedness Training – Inter-Agency Coordination

Step 2: Strengthen the COs coordination capacity

2.1. Complete/Update the MPA Checklist section on coordination and management arrangements

The IASC Minimum Preparedness Actions (MPAs) Checklist consist in practical inter-agency activities aimed at improving inter-agency response, accountability, and predictability that are necessary to the success of the emergency response phase. MPAs guarantee the effective coordination between humanitarian actors by including the perspective of affected populations[37].

In order to meaningfully contribute to MPAs at inter-agency level, IOM has developed its own internal MPA checklist specific for an IOM Mission. Please go to the Guidance Note on Emergency Preparedness in IOM, and read page 7 for guidance on the terminology and how to use the IOM MPA Checklist. Assess the IOM CO by filling in the checklist contained in Annex 2 – (Section 2. Coordination and Management Arrangements – Country MPA) of the Guidance Note on Emergency Preparedness.

Once you have completed the IOM MPA checklist section, it will help you to make sense of the CO's EP level, and to engage on inter-agency preparedness and coordination before a potential disaster or crisis.

Pre-Crisis Coordination	Humanitarian Coordination Structure	Coordination in Mixed Situations and Refugee Response	Community-level Coordination Structures
• Led by national/local authorities • Inter-agency supports the government (Resident Coordinator (RC) for Office for the Coordination of Humanitarian Affairs (OCHA leading)	• Led by the Humanitarian Coordinator (HC) and HCT, key coordination role of OCHA	• Shared leadership through United nations High Commissioner for Refugees (UNHCR) and OCHA • Used when there are refugees and internally displaced persons (IDPs) affected by crisis.	• Formal and informal structures at the community-level with local chiefs, religious or women leaders, community elders, etc...

2.2. Prepare and implement a plan to strengthen coordination capacity

After preparing internally your CO with the MPA (see EP Toolkit 3.02), focus particularly on the area *2. Coordination and Management Arrangements | Country MPA.* Implement any required actions to meet the MPA's, along with persons responsible and deadlines for carrying out the actions.

Then, consider what other preparedness measures your CO can put in place before a humanitarian crisis occurs to be able to contribute to, manage and/or lead inter-agency coordination effectively.

Some examples of activities for improving coordination or working with other agencies/authorities are:

- Clarifying the roles and responsibilities of different members of the humanitarian community, including responsibilities of the national authorities. Within the CO, take time to ensure the relevant CO staff are familiar with the roles and responsibilities of different actors within the humanitarian coordination platforms (i.e. the difference between the Humanitarian Coordinator versus the UN Country Team and Cluster Lead Agencies). A brief description can be found in the IOM Emergency Manual section on Humanitarian Coordination Structure.
- Inter-agency mapping of temporary shelters that may be needed for different hazard types in the context
- Training and capacity building in camp or site management standards
- Use and provide training on the Displacement Tracking Matrix (DTM)

Joint contingency planning is another useful and practical way of preparing for high to medium level risks in your country, and inter-agency contingency planning requires coordination with other agencies. See EP Toolkit components 3.01 Risk Analysis and 3.02 Preparedness and Contingency/Response Planning for more information on joint risk analysis and contingency planning.

2.3. Analyse the key stakeholders for disaster preparedness and response

It may be helpful to conduct this exercise with a small group of colleagues to take into account different perspectives. With your selected colleagues, conduct a stakeholder mapping exercise by first listing out all of the stakeholders to disaster preparedness and response in your country context.

Next, complete the Participation Matrix (See example below). The Participation Matrix helps you to document with whom and how you will engage different actors before a crisis and after a crisis.

[37] IASC (2015) Emergency Response Preparedness Guidelines

Down the vertical axis, phases are listed as pre-crisis and post crises because how you interact with the stakeholders may differ between these two stages. Across the top of the table are the five types of participation, or levels of engagement, you may have with each stakeholder. This would help you to position IOM role and partnerships on potential 3W (*Who does What Where)* that would be established at inter-agency level in case a disaster occurs.

Participation matrix:

Phase	Inform	Consult	Involve	Partner	Empower
Pre-crisis	(insert stakeholder in the appropriate boxes)				
Post-crisis					

2.4. Establish relationships and engage with stakeholders in preparedness and response

IOM's engagement is key as strategies are developed, relationships are built, and decisions are taken in these structures around agency roles and ultimately, funding opportunities and allocations.

Taking into account your completed Participation Matrix, plan for how you will engage the different actors pre- and post-crisis. Often pre-crisis coordination mechanisms exist and IOM's participation in these joint ventures is critical to engaging with partners.

- Such engagement also facilitates IOM's participation in preparedness and response coordination efforts when response and contingency planning starts.
- These structures might include government and/or civil society led disaster committees at the national, regional, and local levels; UN inter-agency forums, such as inter-agency cluster/sector mechanisms; and the community forums through established community level groups.

Step 3: Analyse post-crisis coordination arrangements

When a disaster strikes, it is important to check whether humanitarian coordination structures are functioning as planned after the disaster. Even if roles and responsibilities for response were defined pre-crisis, it is possible that the disaster has affected those agencies responsible or there may be damage to infrastructure would prevent the original plans from being carried out.

Take note of and align to the existing coordination structure after the disaster and ensure you adapt the CO's actions accordingly. From the international side, the cluster system is usually formed once there is a crisis and is usually the main coordination structure from the humanitarian side. From the government, some may establish a crisis cell at the higher level, that senior UN staff engage with.

Step 4: Engage in coordination for emergency response

For this step, it is important to ensure that IOM is present and actively engages in all coordination platforms that are relevant to IOM's mandate and area of operations.[iv] You should look for opportunities for IOM to take a leading role in supporting coordination where the CO has the capacity.

4.1. Engage with national, local and community level authorities

It is important for IOM to establish/maintain relationships with key government counterparts, as well as UN agencies, international NGOs, IFRC, and other national and local partners, in a country before and after a disaster or crisis occurs.

4.2. Engage with inter-agency coordination platforms

Where the UN National-Level Humanitarian Cluster/Sector system is functioning, your CO should carry out the following activities:

- Participate at the HCT meetings and relevant Cluster/Sectors meetings.
- Participate in needs assessments, usually in partnership with authorities and/or other UN and humanitarian organizations.
- Generate internal and external situation reports to communicate IOM's intentions with partners and donors.
- Participate in inter-agency contingency plans and the coordinated funding appeals and create an IOM strategic response plan and IOM Appeal.

Where the UN National-Level Humanitarian Cluster/Sector system is functioning and IOM holds responsibility as the cluster lead agency for Camp Coordination and Camp Management (CCCM) or any other cluster (e.g. Shelter/NFI), the following activities should be carried out:

- Participate in Inter-Cluster Working Group Meetings.
- Advocate and identify durable solutions for displaced families and affected communities.
- Develop locally-adapted camp management tools and guidelines based on the local standards/contexts.
- Monitor services and advocate for standards.
- Provide and manage information to sectors/partners on population needs and services.
- Build national capacity through trainings for national authorities and partners
- Act as the provider of last resort.

4.3. Engage with and communicate to donors

Actively engaging in the coordination structures will empower your CO to identify needs and gaps in the response that can be addressed through IOM programming.

Conduct bilateral discussions with humanitarian donors. For more information on engaging with donors pre-crisis and during response, see EP Toolkit component 3.04 Resource Allocation and Funding Mechanisms.

3.5.5. ROLES AND RESPONSIBILITIES

- Government role

The government, typically the Department of Civil Protection, is the primary entity and duty bearer for emergency preparedness and response at national and local levels. The government is responsible for leading coordination of emergency preparedness and response.

- Partners and inter-agency role

Where there is an established inter-agency cluster/sector coordination structure in operation, the cluster/sector leads support the government in coordination of humanitarian action. It is the responsibility of partners to ensure that plans are closely coordinated with government and aligned to national plans and priorities. Ideally the government and partners will create joint preparedness and response strategies to ensure close coordination and promote speedy response.

- IOM role

It is the role of the CO to ensure that IOM is present and actively engages in all coordination platforms that are relevant to IOM's mandate and area of operations. Along with partners it is the responsibility of IOM to ensure that plans are closely coordinated with government and aligned to national plans and priorities.

3.5.6. KEY MESSAGES

1. Coordination ensures a more coherent and principled response to emergencies and is key to IOM's effectiveness, positioning, and leadership in disaster and humanitarian emergency response.
2. Coordination should take place pre-crisis and post-crisis – in other words – all the time. The key stakeholders involved include the United Nations, the government, and the communities in which IOM works.
3. The key activities to consider pre-crisis are analysing and strengthening coordination capacity of the CO so when a crisis takes place, IOM is prepared for a timely response. Post-crisis IOM should proactively participate in coordination platforms and, where they have the capacity, take a leading role, in coordination efforts for humanitarian action.

3.5.7. KEY TOOLS & RESOURCES

TOOL 1 – IOM (website) IOM Emergency Manual – Coordination in Different Contexts

- Provides overviews of coordination structures and considerations for coordination in different contexts. IOM Emergency Manual

TOOL 2 – IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM – Annex 2: Minimum Preparedness Actions Checklist

- Provides the checklist for Coordination and Management Arrangements in Section 2 to help COs understand and strengthen their level of preparedness for coordination. Minimum Preparedness Actions Checklist

3.5.8. ADDITIONAL TOOLS & RESOURCES

- IASC (2015) Humanitarian Programme Cycle: Reference Module
  - Provides an overview of what needs to be done, when and by whom in coordinated humanitarian action for making decisions, planning and identifying priorities. HPC Reference Module
- UNHCR/OCHA (2014) Joint UNHCR/OCHA Note on Mixed Situations: Coordination in Practice
  - Provides a brief overview of different mixed flow disaster scenarios and which agencies take responsibility for coordination. Joint UNHCR/OCHA Note on Mixed Situations
- PreventionWeb (website) National Platforms
  - Provides declared national coordinating multi-sectoral and inter-disciplinary mechanisms for advocacy, coordination, analysis and advice on DRR. PreventionWeb - Continents & Countries
- IASC (2015) Reference Module for Cluster Coordination at the Country Level
  - Outlines the basic elements of cluster coordination and intends to serve as a reference guide for field practitioners to help facilitate their work and improve humanitarian outcomes. IASC Cluster Coordination Module

SECTION 3.6

EMERGENCY PREPAREDNESS COMPONENTS

INFORMATION MANAGEMENT AND COMMUNICATION

© IOM 2022

3.6. INTRODUCTION - INFORMATION MANAGEMENT AND COMMUNICATION

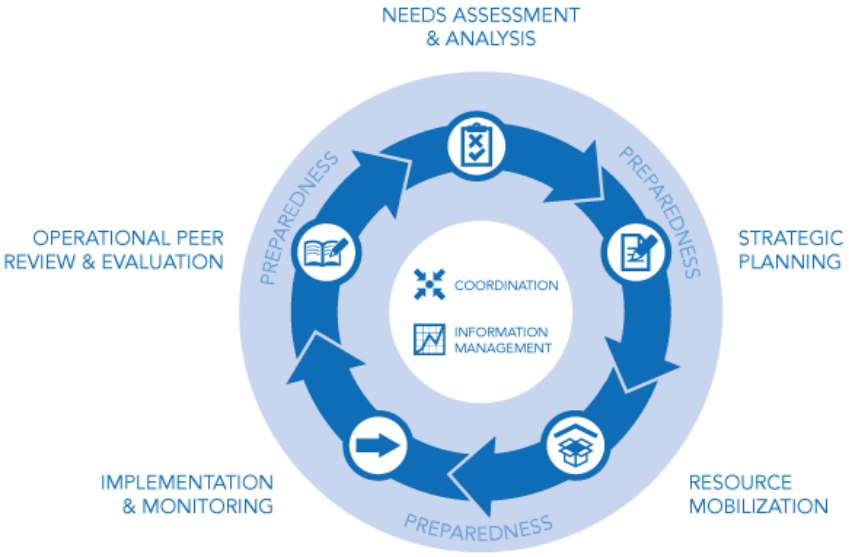

3.6.1. Purpose

This component of the toolkit prepares you to manage and communicate relevant information for preparedness and response activities.

3.6.2. Overview

Humanitarian information management (IM) is the systematic process of collecting, collating, storing, processing, verifying, and analysing data and information, and disseminating it to humanitarian stakeholders. IM underpins each element of the Humanitarian Programme Cycle (HPC) and helps connect them by carrying information from one to another[38].

The Humanitarian Program cycle:

IM is in integral feature of both emergency preparedness and response. If done well, it can provide you with the best available picture of impending emergency situations and guide preparedness and response strategies and plans.

Communication in the context of emergency preparedness refers to the sharing of information, listening to and involving affected communities in decision-making because it contributes to more effective disaster preparedness and improves the quality of IOM service delivery[39].

IM is integrated throughout the relevant components of the Emergency Preparedness (EP) Toolkit. This component focuses on good practice in IM in general and on communication with people affected by crises.

3.6.3. Why is it important?

- Developing IM systems during disaster risk reduction (DRR)/long-term preparedness provides a platform to build on and transition quickly and effectively into emergency IM systems.
- Strong IM, implemented in support of coordination processes, will ensure that relevant actors are working with the same or complementary relevant, accurate and timely information and baseline data[40].
- Communicating effectively with people affected by crisis can positively impact their health, psycho-social well-being, and safety. Participation and feedback from stakeholders improve the quality and accountability of EP and response programs[41].

---

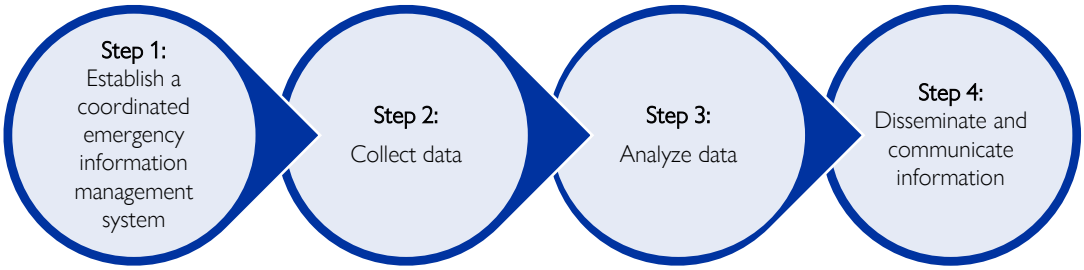

[38] The Humanitarian Programme Cycle is an approach defined by the Inter-Agency Standing Committee, that defines what needs to be done, when and by whom in coordinated humanitarian action to enable managers to allocate staff and tasks, sequence decisions and planning, and identify priorities. IASC (2015) Humanitarian Project Cycle Reference Module, (p. 14)

[39] IOM (2018) IOM AAP Toolkit: Information-Sharing and Transparency

[40] CCCM Cluster (2015) Camp Management Toolkit, (p.72)

[41] Ibid, (p. 46)

3.6.4. OVERVIEW OF STEPS

This toolkit component is based heavily on the Camp Management Toolkit – Information Management Chapter and adapted to include focus on emergency preparedness. See Tool 1 – Camp Management Toolkit in the Key Tools & Resources section below for the full chapter on Information Management.

Remember when developing IM systems, you will consider three distinct aspects:

- Internal IM – for information exchange within IOM
- External IM – for information exchange outside of IOM
- Inter-agency IM – for collective information exchange within the humanitarian coordination structure

These steps focus on inter-agency IM systems and communicating externally within the coordination structure and with crisis-affected people.

Step 1: Establish a coordinated IM system

Your IM needs will depend on where you are in the current HPC. Ideally, you will establish your IM systems before a disaster occurs, and then build on it and adapt it as needed when a new emergency occurs. Assess where you are in the cycle before proceeding with the activities in this step. Remember that preparedness underpins the entire HPC cycle and therefore applies throughout. Information should be collected, analysed, and disseminated in line with an IM strategy at the national level.

For this activity, ensure that you establish or maintain joint IM with the national government and cluster / sector system for coordination. This may include participating in a national or local-level IM Working Group (IMWG)[42] and / or participating in cluster / sector meetings to develop joint assessment and monitoring tools.

Shared systems and tools mean that information is relevant and accessible to a diversity of actors. Properly collected and managed, data contributes to ensuring higher and more consistent standards in assistance and protection within and between camps and other settlement situations. It can also contribute to early recovery and development planning.

The Office for Coordination of Humanitarian Affairs (OCHA) has a key responsibility for IM in an overall response. Clusters / sector groups send relevant information to OCHA to be synthesised into information on the overall response. The OCHA IM Toolbox provides an introduction of IM concepts and links to key documents related to coordinated IM. You can find the link to the OCHA IM Toolkit in the Additional Tools and Resources Section below. Where OCHA is not present, seek direction from the Residency Coordinator (RC)/United Nations Country Team (UNCT) on which organization is leading DRR in the country. The DRR lead organisation would be the focal point for IM Emergency Preparedness.

It is ideal if there is an information focal point for your team who is aware of the principles and procedures involved in best practice for IM. If it has not already been done, the country office (CO) should put into place adequate systems and capacity to meet data management needs agreed by the wider range of actors to ensure accessibility, compatibility, relevance, timeliness, and confidentiality.

[42] The Information Management Working Group (IMWG) supports the Humanitarian Coordination Task Team (HCTT) to strengthen IM coordination with all actors, across clusters, sectors and areas of responsibility. For more information

1.1 Identify information needs

Data availability and what is needed by the IOM CO is context-specific and may differ depending on whether it is a conflict or disaster-induced situation.

When planning data collection, you should establish a clear picture of your information needs. Information needs are dictated by the questions you need answered and the decisions you need to take with regards to emergency response and preparedness activities.

It can be helpful to draw up a table of data needs in the table format. The example below represents a WASH data-sharing and decision-making table which lists the stakeholders who need data, the programming decisions that need to be taken and the data required to make those decisions.

Example table of data requirements for water supply decisions[43]

Stakeholders	Programming Decisions	Data required
Services Providers, Camp Management Agency	Water distribution gap analysis in each zone of the camp, determining the site(s) where new water distribution points are needed.	Data on location, status (functional / not functional, performance) and usage of each water facility from water source to water distribution point.
Cluster / Sector Lead Agency	Water budget allocation for each camp and up-to-date water distribution gaps analysis between camps. Projected water needs and related risks of water supply failure.	Aggregated and prioritised water supply data for each group
OCHA, Humanitarian Coordinator, other clusters / sectors	Relationship between water availability (quality and quantity) and other sectoral needs and indicators such as protection, health, nutrition, and shelter data.	Water supply capacity and management practices for all camps in a particular district. Outreach strategies and approaches water supply related.

If you are establishing new information initiatives, first take an inventory of existing information and analysis in line with the national government and cluster / sector systems in place. This will help to avoid duplication of assessments and data collection.

Step 2: Collect data

For this step you need to plan for and collect the data required to satisfy your information needs defined in the previous step.

2.1. Identify data to be collected

Below is a table that reflects typical data that is collected in emergency preparedness and response. If you have not already do so, consider using the table below to help you create a table of your CO's data needs and work with inter-agency partners to agree on a refined list of coordinated data needs.

Examples of emergency response and preparedness data to be collected[44]

Information Required	Description
Risks Monitoring Information	What risks do distinct groups face in their context whether related to natural phenomena or conflict? And what are the capacities to cope with those risks? This information is normally found through risk analysis and monitoring reports and contingency plans (See EP Toolkit components 3.01 Risk Analysis and 3.02 Preparedness and Contingency / Response Planning for step-by-step guidance on how to produce these reports.)
People data	This may include registration data on families and individuals and sub-groups and individuals most at risk. Please contact your Displacement Tracking Matrix (DTM) team in country to establish data requirements. If there is no in-country capacity, contact the DTM Regional Office and/or HQ for support at: Information Needs and Data Users | Displacement (iom.int)
Services, standards, and activities in camps / settlement areas	This may include key sectors such as water and sanitation, shelter, food, non-food items (NFIs), health, education, livelihoods, and protection, including programmes for women and persons with specific needs, as well as information on distribution and registration procedures.
Information on procedures and systems	Levels of leadership, representation and participation, coordination forums and mechanisms, referral systems and procedures and levels of accountability and environmental concerns. Information should include other cross-cutting issues such as gender and protection of persons with specific needs.

[43] Ibid, (p. 72-73)
[44] Ibid, (p. 72-73)

Instances of breaches of security / camp security and staff safety	Breaches of law and order, militarisation of the camp, restrictions on freedom of movement, gender-based violence or changes in security indicators.
The state of camp / settlement infrastructure	Roads, pathways, communal buildings, health centres, schools, distribution sites, latrines, drains, water supply lines, electricity lines, meeting places and burial sites.
Information about coordination mechanisms	Who is doing what, where?
Operational actors and how to contact them	Who is on committees and groups and when are their meetings taking place? What social, recreational, or sporting events are taking place? To what extent are host communities involved? What training is taking place?

2.2. Prepare staff for data collection

Staff need to be trained, as accurate and objective information depends largely on the skill and integrity of the person collecting it. Do staff understand exactly what is needed and why? What do they do when the information they need is not available? What do they do if an informant gives an answer which they suspect may be inaccurate? Are they able to verify and cross-check? Do they record information legibly / clearly and completely? Do they use colleagues to double-check, to recount? Do they ask for advice when they are unsure?

Training data collection staff, monitoring their progress and spot-checking their results for consistency and plausibility are essential prerequisites to getting worthwhile and trustworthy data.

For more information, see the DTM Toolkit on the Information Needs and Data Users | Displacement (iom.int) Section and the IOM Emergency Manual. Links can be found in the Additional Tools & Resources section below.

2.3. Consider data protection issues

Gathering information on individuals is necessary to better target protection and assistance responses. However, irresponsible processing of information about individuals can put them at serious risk as well as invade their privacy. Finding the right balance between collecting and sharing information for the benefit of the affected population while protecting individuals against misuse of information requires consideration of the following principles:

Principles for protecting individuals in data management[45]

- In determining what data needs to be collected, carefully assess why the information is needed. Only information that serves a specific protection purpose, and that neither harms the informant nor others, should be collected.
- Identify data that can be especially sensitive to make sure the collection and sharing is subject to specific protection measures.
- The way data is collected may jeopardise the security and privacy of individuals and should be conducted in a manner sensitive to protection concerns.
- Agree with humanitarian actors how the information is shared and define why it needs to be shared. Only information relevant to a determined protection purpose should be shared.
- Individual information should, in principle, only be shared with the informed consent of the individual concerned. This should be explained to the person at the time of data collection. Ensure that proper mechanisms are in place to secure the data, including safe and locked rooms, electronic backups, passwords, and access restrictions to sensitive data. Confidential documents should be clearly marked. Where necessary, personal information should be removed or replaced with a code to protect anonymity. Clear procedures should be in place for information to be protected or destroyed in the event of evacuation or withdrawal.
- Undertake a risk analysis: the level of risk associated with different kinds of information will vary and the Camp Management Agency should work with other operational agencies to consider the risk levels and design IM systems accordingly.
- Agree on procedures: agencies need to agree on protocols for collection, data entry, storage, access, retrieval, and dissemination that will minimise risk. They should also jointly determine what information must remain restricted.

Step 3: Analyse data

Data is analysed so that tendencies, developments, and patterns can be identified. Data is also analysed to generate statistics, to compare figures across populations and to produce charts, graphs, and reports, which ultimately informs a gap analysis to identify shortcomings in the provision of services or assistance, as well as progress on implementation and impact of services.

To address the needs of displaced people and to ensure accountability of service providers, data should be disaggregated by demographics, by sector and by implementing agency. To ensure this, your CO must coordinate with the cluster/ sector lead agency, the national authorities, and other relevant stakeholders[46].

[45] Ibid, (p. 74-75)
[46] Ibid, (p. 77)

IOM and cluster / sector analysis tools and templates are available for all stages of the Humanitarian Programme Cycle. See Tool 2 – Humanitarian Programme Cycle Reference Module in Key Tools & Resources and Tool 3 - United Nations High Commissioner for Refugees (UNHCR) Information Management Toolkit section below.

If you have not already undertaken the process of risk analysis, it is covered in EP Toolkit component 3.01 Risk Analysis. There you will find the steps and the tools necessary to analyse risks due to crisis or disaster.

Where the cluster / sector approach is activated, global clusters can be called upon for IM expertise. In countries where IOM is the cluster lead agency for Camp Coordination and Camp Management (CCCM), you can access expertise and capacity building support from the global cluster. In addition, at the national level, the cluster / sector lead agency will generate up-to-date information about activities across the cluster / sector. These should include contact lists, meeting minutes, datasets and needs / gap analysis based on information from the current situation.

Step 4: Disseminate and communicate information

For this step, your team will plan for and disseminate statistics, information and reports to relevant stakeholders such as refugees / IDPs / stateless people, host populations, service providers, the national authorities, and the cluster / sector lead agencies. Sharing information is the foundation of ensuring that gaps in services and assistance in humanitarian response are fulfilled and that people are informed of any potential risks and preparedness measures.

Confidentiality means that sensitive data and information is treated in confidence and not shared in public forums. When such information is shared it should be done selectively and anonymously, ensuring that the identity of any individuals concerned is communicated in ways that will not jeopardise her / his dignity, protection, or security. Analysis can be shared in aggregate to prevent identification of individuals.

Access to information is a vital need and one should expect competition for knowledge during a crisis (to have more donor visibility, government engagement, etc.). Especially in times of conflict, crisis and chaos, information needs to be handled carefully. The Do No Harm principle must underpin any chosen approach, not least when it comes to sharing of confidential and sensitive information[47].

4.1. Define the CO's communication strategy

You do not necessarily need to make formal communication plans, but it can be helpful to think through your communication objectives, distinct audiences, messaging, and a schedule of activities for dissemination. The IOM CO Communications Strategy Template can be a useful tool for defining your communication strategy. You may also refer to the IOM Accountability to Affected Populations (AAP) Toolkit: Information-Sharing and Transparency in the Additional Tools & Resources section below.

A variety of mechanisms should be used to facilitate the effective dissemination of information to affected people. Choices will depend on the type of message to be communicated, the size and profile of the population it needs to reach, protection considerations and the technology available. Issues of language and literacy must be addressed. Dissemination mechanisms might include information boards, committee meetings, leaflets, posters, awareness raising workshops, radio broadcasts, movies, public address systems, house-to-house visits, distribution of meeting minutes and drama events.

4.2. Implement your communication plan

Reports are disseminated to the Cluster / Sector Lead Agency, giving statistics and a description of activities and standards in specific sectors. Gaps, duplications, concerns, and recommendations may be highlighted. These can then be discussed in a Cluster / Sector coordination forum, where action plans can be made, taking the mandates and capacities of different actors into account.

When disseminating information to the affected communities it is important to ensure that information filters down to all concerned and does not stay at the level of leadership only. Information can be misused by leaders as a tool to retain or regain power or control or for the manipulation or misuse of certain information. Existing forums and mechanisms within the populations should be thoroughly explored, not only to better inform data collection techniques, but also to ensure appropriate forums. Mechanisms can be developed to enhance information flow to the wider community.

4.3. Set up and implement mechanisms for two-way communication between IOM and crisis-affected people

The CO should facilitate information exchange between migrants / people affected by crisis and other actors including host communities, service providers, protection agencies, national authorities, and coordination bodies such as the cluster / sector coordination or OCHA.

You can also establish two-way dialogue through participatory planning and engagement with actors from the community up to national government. This will help to ensure any IOM preparedness and response programmes reflect the needs and preferences of different stakeholder groups. The Community-Based Planning Manual and Strengthening Engagement with Local Actors are two IOM resources that provide guidance on how to effectively engage with crisis-affected people and governments. See the Additional Tools & Resources section

[47] Ibid, (p. 79)

below for links to these tools. EP Toolkit component 3.08 Community-Based Disaster Preparedness gives detailed steps on facilitating community-led preparedness initiatives.

All IOM Shelter, non-food items (NFI) and other programmes should establish ways for receiving feedback from affected populations to ensure that issues are heard and acted upon throughout the implementation of programmes. The mechanisms can be different depending on the size and types of programmes. For guidance on establishing feedback mechanisms, see the Additional Tools & Resources section below.

3.6.5. ROLES AND RESPONSIBILITIES

- ### Government role

The government has primary duty to meet humanitarian needs in disaster response and to provide coordination. Government establishes IM systems and protocols for before, during and after emergencies and crises. The government holds vital information about populations that is critical for assessment and analysis of emergency and preparedness interventions. The government is a vital resource of information to inter-agency partners and the communities at risk of or affected by disasters and crises.

- ### Partners and inter-agency role[48]

Where OCHA is present, they play a leading role in humanitarian coordination and IM, especially in IDP situations. OCHA's role is to work across clusters / sectors and provide information resources and common datasets to be used by the majority of stakeholders. They aim to provide standardised cross cluster / sector needs / gap analysis based on information provided by the clusters / sectors, much of which originates from the primary data collected at camp level. If OCHA is not present, the RC is responsible for IM systems. Cluster / sector partners are responsible for proactively exchanging information related to humanitarian responses and to define and adhere to cluster-specific standards and definitions. Partners and inter-agency groups should support the government's IM systems in humanitarian response.

- ### IOM role

IOM should use established IM systems and coordination forums to disseminate information transparently and responsibly, while being mindful of the need to always ensure confidentially and security of information. The CO should facilitate information exchange between people affected by crisis and the humanitarian community to address issues and improve programs.

3.6.6. KEY MESSAGES

1. IM is an essential element which underpins each stage of the HPC and helps connect them by carrying information from one stage to another. Effective information sharing is key to avoiding duplication of activities, filling gaps in provision and ensuring consistent monitoring and reporting
2. IM is a continuous process in preparedness and response. It involves working with migrants / people affected by crisis and other actors including host communities, service providers, protection agencies, national authorities, and coordination bodies such as the cluster/sector coordination or OCHA.
3. IM should be undertaken in a systematic process that facilitates information exchange and coordination with other actors. IOM must ensure two-way communication is established and maintained so that preparedness and response programs address any issues and reflect the needs and preferences of those affected by crisis.

[48] IASC (2008) Operational Guidance on the Roles and Responsibilities of Cluster/Sector Lead & OCHA in Information Management

3.6.7. KEY TOOLS & RESOURCES

TOOL 1 – IOM (2016) Camp Management Toolkit – Information Management chapter

- Includes practical advice to assist Camp Management Agencies in the management and coordination of a camp as well as to ensure respect for the rights of the displaced. The IM chapter provides key considerations and guidance for IM in a camp setting. IOM Camp Management Toolkit - Information Management

TOOL 2 – Inter-Agency Standing Committee (IASC) (2015) Humanitarian Programme Cycle (HPC) Reference Module

- Provides an overview of what needs to be done, when and by whom in coordinated humanitarian action to enable managers to allocate staff and tasks, sequence decisions and planning, and identify priorities. IASC HPC Reference Module

TOOL 3 – United Nations High Commissioner for Refugees (UNHCR) (website) UNHCR Information Management Toolkit

- Presents UNHCR information and data management advice and tools meant to inform a coordinated humanitarian response during the first two to four months of a refugee emergency, but the guidance provided is relevant and useful in a broader range of operational settings. UNHCR Information Management Toolkit

3.6.8. ADDITIONAL TOOLS & RESOURCES

For IM guidance, tools, and templates:

- **IOM (website) Displacement Tracking Matrix (DTM) & Partners Toolkit – Information Needs and Data Users**
  - Shares guidance and tools for planning together starting from decisions and information needs. Information Needs and Data Users | Displacement (iom.int)
- **IOM (website) IOM Emergency Manual – Assessments in Emergencies**
  - Presents an overview of and recommended references and tools for needs assessments which provide the evidence base for planning humanitarian interventions. IOM Emergency Manual
- **Office for Coordination of Humanitarian Affairs (OCHA) (website) OCHA IM Toolbox**
  - Presents introductions to information management concepts and links to key documents for coordinated information management in humanitarian response. OCHA IM Toolbox
- **IOM (website) Preparedness and Response Division (PRD) Helpdesk**
  - Provides virtual assistance to help COs learn more about emergency preparedness resources and tools available. PRD Helpdesk

For guidance on enhancing two-way communication:

- **IOM (2016) Guidance on Establishing Feedback Mechanism**
  - Provides guidance and a starting point for IOM missions that need to establish a feedback mechanism. Emergency Manual - Guidance on Establishing Feedback Mechanism
- **IOM (2020) IOM Accountability to Affected Populations (AAP) Toolkit: Information-Sharing and Transparency**
  - Presents guidance on how to share information, listen to and involve communities in decision-making to facilitate the implementation of Accountability to Affected Populations statement of commitments. AAP Toolkit Information Sharing and Transparency
- **IOM (2022) Participation in Practice: Community-Based Planning Manual**
  - Provides detailed step-by-step guidance for community-based assessment, planning and recovery processes. Participation in Practice: Community-Based Planning Manual
- **IOM (2020) Strengthening Engagement with Local Actors Toolkit**
  - Guides users who are planning project activities to enhance engagement with a wide range of local stakeholders. IOM Migration and Sustainable Development (M&SD) - Strengthening Engagement with Local Actors, Toolkit

SECTION 3.7

EMERGENCY PREPAREDNESS COMPONENTS

EARLY WARNING SYSTEMS

© IOM 2022

3.7. INTRODUCTION - EARLY WARNING SYSTEMS

3.7.1. Purpose

This component of the toolkit prepares you to support early warning systems (EWSs) to plan for sudden onset disaster/crisis situations.

3.7.2. Overview

An EWS is an integrated system of hazard monitoring, forecasting and prediction, disaster risk assessment, communication and preparedness activities systems and processes that enables individuals, communities, governments, businesses and others to take timely action to reduce disaster risks in advance of hazardous events[49].

EWSs may indicate the need for evacuation. Evacuation commonly refers to the act of temporarily moving people away from a dangerous area to one of safety. Evacuation usually refers to quickly developing, acute emergency situations. It is commonly characterized by a short time frame, from hours to weeks, within which procedures need to be enacted to save lives and minimize exposure to harm[50].

You will need to complete the steps in components 3.01 Risk Analysis and 3.02 Preparedness and Contingency/Response Planning prior to implementing the steps in this component. Further, through completing components 3.01 and 3.02, you would have identified supporting EWSs as a needed emergency preparedness activity in your country context.

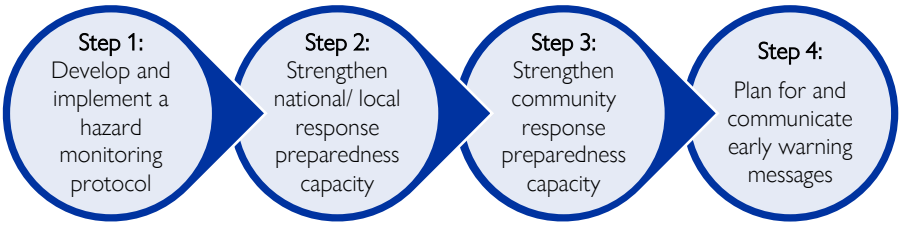

3.7.3. Why is it important?

- Millions of people must leave their homes every year to avoid danger and seek safety out of harm's way from potential or actual conflict, violence or disasters[51].
- Early warning Systems (EWSs) can save and protect the lives of people exposed to actual or imminent danger through their timely and rapid movement to safer locations and places of shelter[52].
- Supporting government to build their capacity to plan for and implement EWSs promotes robust emergency preparedness[53].

[49] UNDRR Terminology (website)
[50] CCCM Cluster (2014) The MEND Guide: Comprehensive Guide for Mass Evacuations in Natural Disasters
[51] IDMC (2022) Global Report on Internal Displacement 2022
[52] CCCM Cluster (2014) The MEND Guide: Comprehensive Guide for Mass Evacuations in Natural Disasters
[53] IOM (2021) IOM Disaster Risk Reduction Report (Pg. 18)

3.7.4. OVERVIEW OF STEPS

Please note that the steps defined above may be taken concurrently or in a different order depending on the situation and your selected projectized activities.

Step 1: Develop and implement a hazard monitoring protocol

All EWSs must be continuously informed by reliable information about the potential disasters/crises and the context.

Establish your own country office (CO) protocol for monitoring hazards and displacement risks that ensures you are constantly informed of developing disasters and crises that are likely to impact people in your area of operation. This will likely involve tracking national and local hazard monitoring systems and ensuring you are involved in any inter-agency coordinated hazard monitoring. You can also use the risk monitoring tools available on Tool 1 - Emergency Preparedness (EP) Dashboard for risk monitoring in the Key Tools & Resources section below.

Where there is a lack of local information resources from hazard monitoring, there are other globally recommended EW (Early Warning) information and alert services available for multi-hazard, natural hazards and conflict-related disasters and crises. The table below describes three global sources for hazard monitoring systems. The services below give options for receiving immediate disaster and crisis alerts by email 24 hours per day. Links to all the tools below can be found on the IOM EP Dashboard.

Selected tools for global hazard and crisis monitoring on the EP Dashboard

Tool	Description	When to Use
Assessment Capacities Project (ACAPS) – Crisis in Sight	The dataset contains risks identified by ACAPS analysts in their daily monitoring and analysis of more than 100 humanitarian crises worldwide	Use when you are working in multi-hazard contexts and need regular up-to-date information.
ReliefWeb	An Office for the Coordination of Humanitarian Affairs (OCHA) service that monitors alerts and ongoing disasters worldwide. A disaster description is provided along with the latest updates, maps and infographics.	Use in contexts where there are risks related to natural hazards such as earthquakes and floods.
CrisisWatch	The global conflict tracker is a tool designed to help prevent deadly violence by providing up-to-date information from over 70 conflicts and crises, identifying trends and alerting to risks of escalation and opportunities to advance peace.	Use when you are working in contexts where this is a risk of violence and conflict.

The tools listed above, and others, can be found on the EP Dashboard. You can find the link to the EP Dashboard in the Key Tools & Resources section below.

Step 2: Strengthen national/local response preparedness capacity

Building capacity of national and local government for EWSs is an important way that your CO can promote emergency preparedness. Stakeholders for capacity building will likely include responsible authorities, other emergency responders, public service providers and people living and working in high-risk areas.

Tool 2 - Words-into-Action: Disaster Displacement: How to reduce risk, address impacts and strengthen resilience, which can be found in the Key Tools & Resources section below, is a useful guide that gives an overview of how to build capacity in an environment of disaster displacement.

2.1. Provide training and learning activities to strengthen preparedness capacity

IOM trainings for government and communities can promote the inclusion of migrants in emergency preparedness.[v] Training topics might include mapping of migrant groups in the community, how to communicate with migrants in an emergency, coordination between migration authorities, civil protection and foreign services, and sharing experiences, challenges and opportunities in addressing the needs of migrants during emergencies.

Your CO may also train the existing workforce and voluntary workers in disaster response and strengthen technical and logistical capacities to ensure better response in emergencies. Training and workshops may be used to develop and/or improve standard operating procedures for different scenarios, strategies and coordination structures and to put in place equipment and resources needed for effective emergency preparedness.

When developing public EWSs, planners must account for the public's perceptions of warnings, their experience related to reacting to warnings in the past, and public beliefs and attitudes regarding disasters and public EWs. Capacity building and awareness briefings, trainings and EW drills and simulations can assist building capacities and awareness of the system and how it should activate community response.

See below for a list of tools for strengthening national and local response capacity through training and simulations. Links to these tools can be found in the Additional Tools & Resources section below.

Tools for strengthening national/local response preparedness capacity

Tool	Description	When to Use
Migrants Caught in Countries of Crisis (MICIC)[54] Repository of Tools	Contains guidelines and training materials that can be used in EW, evacuation and preparedness for migrants.	Use when you are developing training for local government and community leaders.
Multi-hazard EWS: A Checklist	Provides checklists for governments and the humanitarian community structured around the key elements of an effective EWS.	Use when supporting government to develop and plan for the implementation of EWSs in a multi-hazard environment.
Populations, Refugees & Migration (PRM) Regional Migration Program Exchange	Repository of disaster/crisis response training and tools in different languages.	Use to identify and plan for capacity strengthening and training of government and civil society actors.
Supporting Migrant Inclusive Emergency and Crisis Simulation Exercises	Provides a practical roadmap for conducting migrant-inclusive simulations including lessons learnt from previous IOM regional migration programmes.	Use to guide you in planning and conducting simulations for crisis response with local authorities and civil society actors.
The Mass Evacuation in Natural Disasters (MEND) Guide: Comprehensive Guide for Planning Mass Evacuations in Natural Disasters	Provides considerations for migrants and a template to assist planning bodies for the development/refinement of evacuation plans with emergency management principles	Use when you are supporting government to develop evacuation plans.
Words-into-Action: Disaster Displacement	Offers practical guidance to integrate disaster displacement and other related forms of human mobility into disaster risk reduction (DRR) strategies in accordance with the Sendai Framework for DRR 2015-2030.	See pg. 47 for considerations and guidance on developing EWS and contingency plans.

Also see EP Toolkit component 3.09 Capacity Development/Training and Exercises for step-by-step guidance on conducting capacity development activities.

[54] The Migrants in Countries in Crisis (MICIC) Initiative, a government-led effort co-chaired by the United States and the Philippines, aims to improve the protection of migrants when the countries in which they live, work, study, transit, or travel experience a conflict or natural disaster.

Step 3: Strengthen community response preparedness capacity

Tool 3 –Community-Based Planning Manual is an IOM tool that you can use to guide you through the process of engaging with local leaders, civil society and communities. You can find a link to this tool in the Key Tools & Resources section below.

3.1. Conduct community-level awareness-raising activities

It is essential that communities understand their risks and know how to react. Education and preparedness programmes play a key role. The community should be well informed on options for safe behaviour, available escape routes, and how best to avoid damage and loss to property.

3.2. Facilitate community-based EW and evacuation planning

IOM may support the government by facilitating participatory development of community/neighbourhood-based disaster risk assessments and evacuation plans, including information in accessible languages and formats on potential evacuation zones, EWSs and safe shelter.

Migrants and civil society have capacities and resources that they can contribute to emergency preparedness and response. Their language abilities, first-hand knowledge of migrant populations, understanding of cultural norms within their communities, and ability to foster greater trust toward state authorities and other actors can be leveraged to create more comprehensive and effective systems and programs. Look for opportunities to empower women and persons with disabilities to lead and promote gender equitable EW and response.

Your CO may promote the application of simple and low-cost EW equipment and facilities. IOM should support evacuation planning by ensuring that the different needs of people during evacuation are considered and addressed. An example would be an older person or persons with disabilities who need extra protection measures during evacuation or who need physical support to move safely to a different location. Migrants themselves and civil society may be in the best position to help identify people with vulnerabilities and special needs. They are also well-positioned to identify solutions to address any required special protection measures and needs for evacuation. It is also essential that emergency management plans are in place, well-practiced and tested.

Below are tools for strengthening community response preparedness capacity through inclusive planning, training and exercises. Links to these tools can be found in the Tools & Resources section below.

Tools for strengthening community response preparedness capacity

Tool	Description	When to Use
CADRI Tool for DRR Capacity Diagnosis and Planning	Supports countries in their efforts to strengthen national and local capacities to reduce disaster and climate related risks by providing a bank of questions for capacity assessments	Use in the learning needs analysis stage when you are identifying capacity needs of communities.
MICIC Repository of Tools	Contains guidelines and training materials that can be used in EW, evacuation and preparedness for migrants.	Use when you are developing training for communities and those who work with them on migrant-related crisis.
International Federation of the Red Cross (IFRC) Vulnerability, Capacity Analysis (VCA) with Reference Sheets	Provides information on how to conduct a VCA with tools to help you carry out your own VCA exercises with communities.	Use for grassroots community-level risk analysis and use the mapping techniques to identify evacuation routes and identify plans for alternative shelter in a crisis.

Also see EP Toolkit component 3.08 Community-Based Disaster Preparedness for step-by-step guidance on conducting community-led disaster preparedness activities.

Step 4: Plan for and communicate EW messages

4.1. Agree EW communication plans

In your context, you should work in close coordination with government and inter-agency actors to ensure you deliver pre-agreed consistent crisis and hazard-specific communications to people at risk of displacement. People need the knowledge of potential perils they face if they are to make informed decisions about how to reduce their exposure and vulnerability.

IOM may support the government in formulating EW communication plans. The checklist below outlines best practices in EW and risk communications.

EW and Risk Communication Planning Checklist	
▪ Ensure the full spectrum of vulnerabilities, exposure, and hazards faced by different people are identified – including conflict, pandemics, gender-based violence, communal tensions,	▪ Identify the most appropriate communication channels, which can include social media, crowdsourcing and other digital

etc, so that this is accounted for in any risk communication planning. ▪ Ensure that differences in how people experience risks (including on the basis of age, gender, disability, displacement status, etc) are identified and understood. ▪ Develop risk communication strategies targeting the "last mile" to reach communities and local municipalities in their local language and in accessible formats, with culturally and socially appropriate messaging to improve risk knowledge and risk reduction actions. ▪ Put appropriate measures in place to reach displaced and remote populations who may not have access to critical risk communication systems, and to reach other groups who may be more isolated and face barriers to accessing communication systems, such as persons with disabilities.	knowledge-sharing, as well as community networks to promote risk knowledge. ▪ Include communities in the design, implementation, monitoring and evaluation of preparedness plans, ensuring that the most marginalized and at-risk groups are engaged. Where possible adapt methodologies for engaging local populations in disaster risk assessment and risk mitigation planning. ▪ As part of the exit from a response operation, go through a lessons-learned exercise with affected communities to identify what they could do differently in the event of another disaster. Questions to consider: What were the factors that turned a hazard event into a disaster? Why did the event lead to displacement? What could have been put in place, so the impact was not as great? What prevention measures were missing for you and your family?[55]

Part of your planning will be to agree the key risk messages to be communicated which must be in coordination with and align to government strategies and policies. Migrants and people at risk need to understand potential risks associated with a crisis, where and how to obtain assistance, and how to inform stakeholders of their needs. Stakeholders should find appropriate channels to communicate with migrants and to identify their needs and capacities. IOM communications should address language, cultural, and other barriers. The effects of crises, such as power failures, loss of internet and satellite communication systems, and even the deliberate spread of misinformation (for instance, by people smugglers) may disrupt or constrain communication with migrants)[56].

4.2. Disseminate pre-event risk communications and EWs

Risk communications can be shared at all times and should be disseminated according to your risk communication planning, as discussed above.

Where possible, identify opportunities to integrate key messages about risks and EWSs in other ongoing IOM projects and activities. Risk communications may be posted in public areas and/or added on to other community-level trainings such as livelihoods or Water, Sanitation and Hygiene (WASH) related trainings.

4.3 Disseminate evacuation advisories (when the government has decided to evacuate)

Warnings must reach those at risk. Clear messages containing simple, useful information are critical to enable proper responses that will help safeguard lives and livelihoods. Regional, national and community level communication systems must be pre-identified and appropriate authoritative voices established. The use of multiple communication channels is necessary to ensure as many people as possible are warned, to avoid failure of any one channel, and to reinforce the warning message.

[56] Guideline 6: MICIC Initiative (2016) Guidelines to Protect Migrants in Countries Experiencing Conflict or Natural Disaster PRM Regional Migration Program Exchange - MICIC guidelines

3.7.5. ROLES AND RESPONSIBILITIES

- Government role

National governments are responsible for high-level policies and frameworks that facilitate EW and for the technical systems that predict and issue national hazard warnings. Local governments are at the centre of effective EWSs. They should be empowered by national governments, have considerable knowledge of the hazards to which their communities are exposed and be actively involved in the design and maintenance of EWSs. They must understand advisory information received and be able to advise, instruct, and engage the local population in a manner that increases public safety and reduces the possible loss of resources on which the community depends.

- Civil society role

Non-governmental organizations play a role in raising awareness among individuals, communities, and organizations involved in EW, particularly at the community level. They can also assist with implementing EWSs and in preparing communities for disasters. In addition, they can play an important advocacy role to help ensure that EW stays on the agenda of government policy makers.

- Community role

Communities, particularly those most vulnerable, are fundamental to people centred EWSs. They should be actively involved in all aspects of the establishment and operation of EWSs; be aware of the hazards and potential impacts to which they are exposed; and be able to take actions to minimize the threat of loss or damage[57].

- IOM role

The role of your CO is to support the government and communities in preparing for and implementing EWSs. The IOM CO could support monitoring of the hazards and potential crises, support capacity strengthening of national/local government and communities and, in coordination with government, disseminate risk communications.

3.7.6. KEY MESSAGES

1. Millions of people are forced to evacuate every year. IOM is committed to supporting EWSs because they contribute to early actions that prevent harm from sudden onset disasters.
2. Preparedness measures for EWSs are most useful in the weeks and months leading up to a likely sudden onset hazard event or crisis. It empowers communities, local civil society and government to participate in EWS and to strengthen their capacity for early response.
3. Staying well-informed with up-to-date reliable hazard/crisis monitoring information and engaging government and communities in inclusive capacity strengthening are key to the effectiveness of EWS and evacuation.

SECTION 3.8

EMERGENCY PREPAREDNESS COMPONENTS

COMMUNITY-BASED DISASTER PREPAREDNESS

© IOM 2022

3.8. INTRODUCTION - COMMUNITY-BASED DISASTER PREPAREDNESS

3.8.1. Purpose

This component of the toolkit prepares you to facilitate communities to assess, design, implement and monitor community-based disaster preparedness (CBDP) projects.

3.8.2. Overview

Community-based disaster preparedness projects promote the involvement of potentially affected communities in disaster/crisis preparedness at the local level. This includes community assessment of hazards/potential crises, vulnerabilities and capacities, and their involvement in planning, implementation, monitoring and evaluation of local action for preparedness. Preparedness projects referred to in this toolkit component typically have an outlook of 6-12 months and are resourced through humanitarian and emergency funding streams with the idea that there is an impending emergency[58].

A community can be defined as a geographical entity (such as a cluster or households, a small village or neighbourhood in a town, an ethnic group or a professional group). What makes a community is that they share the same living environment and similar exposure and vulnerability to a hazard. A community is not necessarily homogeneous and may feature people of different circumstances such as IDPs (Internally Displaced Persons) in a camp or outside of a camp and/or informal settlers.

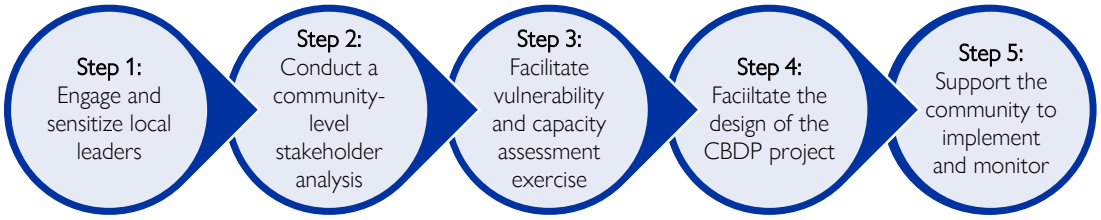

3.8.3. Why is it important?

- IOM has a global commitment to strengthening disaster and crises preparedness at the community level because well-designed CBDP can ultimately save lives or contribute to preventing significant deaths and losses.
- Communities, whose survival are at stake, are often better prepared to deal with disasters and crises in an impactful way because of their intimate knowledge of local opportunities and constraints[59].
- Local response personnel, community organizations and neighbours working and living where a disaster or crisis strikes are always the first to respond, remain long after others leave, and collectively comprise what often amounts to the most substantial response[60].

[58] Adapted from UNDRR (2016) Report of the open-ended intergovernmental expert working group on indicators and terminology relating to disaster risk reduction (p. 16)
[59] Ibid
[60] Ibid

3.8.4. OVERVIEW OF STEPS

Step 1: Engage and sensitize local informal/formal community leaders

Initially, it will be important for you to arrange coordination meetings with people such as mayors and sub-district officials who will then be able to facilitate your team to make connections with other relevant informal and formal community representatives such as members of a village/community disaster preparedness committee. Please note, the DP (Disaster Preparedness) committee may be part of an existing village/community disaster risk management committee.

The initial meetings are an opportunity for you to gather vital information about the risks in the geographic area, the concerns of leaders and people about those risks and priorities for improving disaster and crisis preparedness. Risks may include natural hazard events such as earthquakes and floods, disease outbreaks and crises due to conflict. The meeting will also be an opportunity for you to clearly communicate CBDP scope and objectives from your organisation and link them with the local government's preparedness priorities.

The success of your intervention is dictated by the level of trust and confidence that you have been able to build with local leaders. For more detailed information on how to engage local actors for community-based planning, See Tool 1 – IOM 2022 participation-in-practice-community-based-planning-manual.pdf in the Key Tools and Resources section below.

Step 2: Conduct a community-level stakeholder analysis

CBDP can only be successful when the right stakeholders can be engaged at the right levels throughout the process of assessment, design, implementation and monitoring phases of the project.

With your CBDP team and selected representatives, conduct a stakeholder mapping exercise by first listing out all the stakeholders to disaster/crisis preparedness in the target community. Next, complete the Participation Matrix (See example below.). The Participation Matrix helps you to document with whom and how you will engage different actors throughout your CBDP project.

Down the vertical axis, the distinct phases of a CBDP project are listed and across the top are the five types of participation, or levels of engagement to have with each stakeholder.

Participation matrix

Phase	Inform	Consult	Involve	Partner	Empower
Assessment	(Insert stakeholder in the appropriate boxes)				
Design					
Implementation					
Monitoring					

Your CBDP intervention must be responsive to the needs and demands of various vulnerable population groups, because each one may experience disasters and crises differently. Therefore, when completing the Participation Matrix, vulnerable groups must be analysed as sub-groups (For example, in urban areas the poor or informal settlers; and in rural areas small farmers, laborers, fisherfolk, and indigenous people. It is also the same for people with disabilities, unaccompanied minors or expectant women, whereby evacuation and other rescue operations may not be as easy for them than for people with no vulnerabilities.).

Give careful consideration to how your CBDP project will allow vulnerable and marginalised groups to participate in the design and implementation of CBDP services. For example, how could you create safe spaces for consultation, or consider the physical barriers that could prevent participation of people with vulnerabilities?

Step 3: Facilitate a vulnerability and capacity assessment exercise

For this step, your team will help to build a collective understanding within the community of prevailing local risks and vulnerabilities. There are various tools for participatory disaster risk assessment, most notably the Vulnerability and Capacity Assessment (VCA) https://dev.humanitarianlibrary.org/resource/vca-toolbox-reference-sheets-0 developed by the IFRC (International Federation of Red Cross) or the Hazards, Capacities, Vulnerabilities Assessment (HVCA) In CBDP Resources folder developed by Asia Disaster Preparedness Center (ADPC). You can find links to these tools and more in the Tools & Resources section below.

VCA is a participatory investigative process designed to assess the risks that people face in their locality, their vulnerability to those risks, and the capacities they possess to cope with a hazard and recover from it when it strikes[61]. While the VCA exercise guidance is primarily focused on natural phenomena, encourage stakeholders to also consider human crises and mobility issues as this is the primary focus of IOM.

The table below represents several tools that will help you to build a collective understanding of hazards, vulnerabilities and capacities of a community. When conducting VCAs, at least three different sources should be used to identify and triangulate the various types of disasters information within a community.

Useful tools to identify hazards, capacities and vulnerabilities[62]

Tool	Description	When to Use
Desk review	A study of existing data to gain knowledge of risks and vulnerabilities in the region	Desk review should be used wherever possible as it is an efficient and cost-effective way to triangulate data with other participatory methods.
Community hazard/resources map	A map created by community members indicating prevalent hazards and/or resources in the area	Mapping exercises such as hazard mapping and resource mapping help to understand where to locate resources and identify places of high risk. They are useful for getting a diverse perspective because they do not require literacy.
Focus group discussion	A discussion involving community members (6-12) based on a specific topic	The participants should have a common interest but bring distinct perspectives. Be careful that all people in the room will feel comfortable to speak to each other. FGDs go into more depth in terms of the issue of focus.
Seasonal chart	A chart created by communities to rank the prevalence of hazards by month	Seasonal chart is good for people who know harvesting cycles or whose circumstances would make them familiar with issues that happen during different seasons.
Transect walk	A structured walk through a local area or community to identify vulnerabilities, capacities and hazards by means of observation	Transect walk is a good technique to use with people who know the area well or who could highlight issues with specific sectors

The selection of techniques requires you to consider the goals of your assessment, efficient use of resources, the social context in which you are working and appreciation of triangulation. For a full guide on conducting a VCA exercise, see Tool 2: IFRC VCA Toolbox with Reference Sheets in the Key Tools & Resources section. Pages 78-83 of the IFRC VCA Toolbox contain samples of community hazard and resources maps. https://dev.humanitarianlibrary.org/resource/vca-toolbox-reference-sheets-0

The assessment activities thus far will equip community representatives and your team with a range of information about people, their environment and resources that can be collated together to establish the vulnerabilities and capacities of the community. Be sure to document the findings from the VCA so it can be used for the design of the CBDP project in the next step.

Step 4: Facilitate the design of the CBDP project

The next step is to develop an action plan based on the results of the VCA. To implement this step, conduct or co-conduct a meeting/workshop with selected community representatives to build consensus on the priority disaster preparedness concerns and required actions to address them. The design must focus on how to achieve the actions with the input and support of the local authorities and the community.

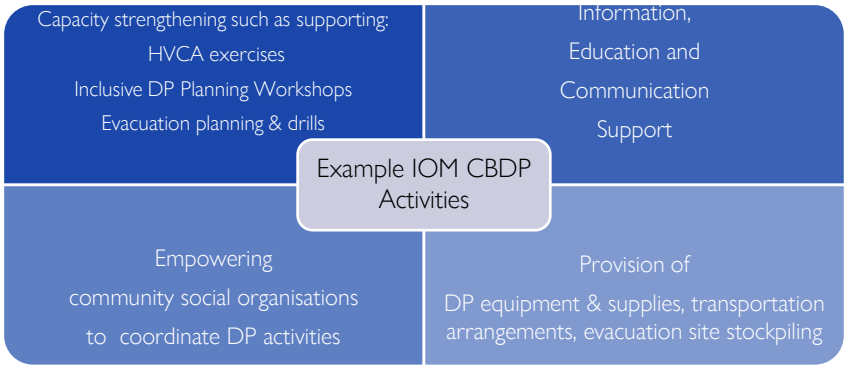

[61] IFRC (2007) VCA Toolbox with Reference Sheets
[62] Ibid

Example disaster preparedness action plan[63]

Activities	Timeframe	Human Resources Available	Other Resources Available	Resources needed	Committee/ People Responsible
Hazard: Flood					
Conduct evacuation drills	Before rainy season (August)	Family, Community, Church organisation Skills and knowledge	5 handheld radio units, 5 chainsaws, 3 rolls of rope, 5 megaphones	Stretchers for people with mobility issues (IOM to provide)	Evacuation Committee Chair
Conduct disaster preparedness information, education and communication campaign	Before rainy season	Community leaders, Teachers, Church leaders, Artists	Papers, Markers, Posters, Training on DP	Expertise in risk communication and support to disseminate (IOM to provide)	Training and Education Chair

Wherever possible, use pre-existing community committees to carry out the tasks. Refer to your Participation Matrix from Step 2 to ensure you are engaging the planned stakeholders with the appropriate level of engagement. Below are some examples of CBDP activities that IOM has supported.

Example CBDP activities that IOM has supported

Remember, at this stage, that it is important for you to set expectations for IOM's involvement in the CBDP project and develop strategies for a smooth handover and sustainability once the project is complete. This may include identifying an organisation to maintain the repository for DP plans, sharing information and training materials, storage and maintenance arrangements for equipment and responsibility to replenish supplies, as necessary.

Once the community has identified their action plan, they will need to develop a disaster plan which describes the hazards, objectives and indicators for success of the CBDP project. If needed, you may support them to develop the plans by facilitating planning meetings and/or documenting and communicating the plan.

According to the Capacity for Disaster Reduction Initiative (CADRI) Partnership, well-designed CBDP projects typically involve significant capacity strengthening efforts to empower local government village/community disaster preparedness committee. You can find examples of IOM's experience in community-based disaster preparedness in the Tools & Resources section below.

Step 5: Support the community to implement and monitor their CBDP plan

Community project partners should take a leading role to implement the disaster preparedness measures as per the plan they created in the previous step. Based on the capacity of the community committees, IOM should provide complimentary support to ensure planned activities are inclusive, implemented on time and within the given resources.

[63] This is an example of a plan to demonstrate how the tool may be completed. The table should be completed according to your findings in the VCA exercise.

5.1. Support CBDP project management

To begin implementation, as soon as possible after Step 4 is complete, facilitate/co-facilitate a kick-off meeting(s) with the DP committee leaders and other relevant stakeholders (See your completed Participation Matrix from Step 2 for reference) to establish communication protocols, ways of working, a CBDP calendar of events and a monitoring and evaluation system for the project.

During the kick-off meeting(s), collectively create a coordinated calendar of events for the entire project, ensuring that events are in line with any other local civil defence and/or Civil Society Organization (CSO) DP activities and well-spaced, so that those involved will not be overwhelmed with too many activities in a short time. Also ensure that the DP events are accessible in that they are offered at times and places that are safe and convenient as possible to all the participants.

Below is an example of a CBDP calendar of events based on the DP Action Plan in the previous step.

Example CBDP calendar of events:

February	March	April	May	June	July
Hazard: Flood					
Kick-off meeting Procure IOM DP equipment and supplies Select venues	DP Committee Status Meeting Training of trainers Risk communication development	DP Committee Status Meeting Pilot training Deliver training invitations Disseminate risk communications	DP Committee Status Meeting Community Disaster Preparedness trainings	DP Committee Status Meeting Evacuation Drills	DP Committee After Action Review Meeting Project handover

In a six-month project, plan for at least one DP committee status meeting per month for tasking, mobilising community resources, capacity building, monitoring and review, and adjusting. IOM may support the implementation of DP committee status meetings, for example, by providing advice on effective meeting management and facilitation techniques that ensure inclusive participation. Further, IOM could ensure that there is an assigned note-taker to record and communicate agreed actions and decisions in a timely manner after each meeting.

5.2. Facilitate the creation of and implementation of the monitoring and evaluation system

Once there is a detailed calendar of events you should facilitate the community to develop a monitoring and evaluation system to cover the progress on activities, time frames, budget, indicators, outputs, objectives and the impact of the disaster preparedness measures. Monitoring should also include attention to who might be negatively affected and whether anyone has dropped-out and, if so, why.

Establish and implement the monitoring and evaluation system with the involvement of key stakeholders, to ensure their diverse needs can be met in relation to what they would like to monitor, and how and when they would like the data to be collected. The monitoring teams should feed information into the DP Committee Status Meetings so that any necessary adjustments can be discussed and made in a timely manner during the project. To find some examples of monitoring tools for community work at IOM, click the links below. Below are a set of IOM monitoring tools that can be adapted and used for CBDP.

- IOM Papua New Guinea CBDRM (Community Based Disaster Risk Management) monitoring tool (In CBDP Resources folder)
- IOM 3W EDM for Internal Use (In CBDP Resources folder)
- IOM Field activity monitoring (In CBDP Resources folder)

5.3. Facilitate DP activity implementation

You will provide support to facilitate the community's implementation of the CBDP plan. See the table below for examples of how IOM may support and facilitate communities on different types of disaster preparedness activities.

Examples of how IOM can support implementation of CBDP:

Capacity Strengthening	IEC Campaign	Empowering DP Partnerships	Strengthening community DP teams
• Training of trainers to promote the use of interactive learning techniques • Technical expertise on curriculum design • Providing training and exercises in areas such as DP,early warning systems, first aid, search and rescue and evacuation*	• Facilitate the community to access nationally accepted DP curriculum and information materials • Provide technical expertise to design and develop contextualised DP messages and content • Disseminate risk communications through the Help Desks	• Empowering existing DP community social organisations and building partnerships and networks between stakeholders • Facilitate community level DP coordination and forums to share information and pool resources	• Procure equipment and supplies to support DP activities • Promote inclusive response planning • Work with community leaders to establish sustainability plans for equipment and future supply needs

**For specific information on capacity strengthening possibilities, refer to other components of the EP Toolkit including component 3.07 Early Warning Systems and 3.09 Capacity Development/Training and Exercises.*

5.4. Facilitate an After-Action Review to evaluate the project and learn lessons

Towards the end of the CBDP project, facilitate or co-facilitate a meeting with relevant stakeholders to debrief the entire project from start to finish and capture important lessons learnt from the experience. Ensure these lessons are documented and disseminated to relevant stakeholders for improved disaster preparedness actions.

5.5. Hand over the CBDP project

At the end of the implementation phase, you will need to prepare for IOM's exit from the CBDP project. Handover activities will vary according to the context, but below are some examples of how you could facilitate a smooth transition from the project to ensure the sustainability of the CBDP project.

Example handover measures for CBDP:

Capacity Strengthening	IEC Campaign	Empowering DP Partnerships	Strengthening community DP teams
• Help to establish a pool of experienced DP trainers that can be used in future • Share/translate any training materials developed by IOM • Identify possible local funding mechanisms for future training	• Share electronic and hard copies of DP IEC and RCCE materials with relevant stakeholders • Establish referral system to IOM Help Desks with partners where possible	• Facilitate planning to continue opportunities for strengthening partnerships • Help to identify funding mechanisms for future partnership events	• Hand over ownership of equipment to agreed stakeholders and agree terms for maintenance • Help to document and communicate future DP Team funding needs to relevant authorities

Within the norms of the cultural context and in close coordination with local leaders, you may wish to support a ceremonial celebration of the project accomplishments with the relevant stakeholders.

3.8.5. ROLES AND RESPONSIBILITIES

- Local government role

Government support is required to create a conducive institutional and policy environment to encourage CBDP. While central government retains the responsibility to create the policy environment and financing mechanisms, local governments are best placed to provide the needed support: they have a clear mandate to engage communities; they control local finance; they can provide technical support in the design and construction of community DP infrastructure.

- Civil society role

Civil society can be instrumental in supporting the establishment of the Community DP Organizations and/or support the inclusion of those most vulnerable in the design, implementation and monitoring phases.

- Community role

The community is at the heart of all CBDP programming. Community representatives should be included in (and where possible, lead) the assessment, design, monitoring and evaluation of disaster preparedness activities.

- IOM role

Your primary role in CBDP is to support and facilitate communities to assess, design, implement and monitor their projects. Wherever possible, promote community members to take leading roles during throughout the CBDP project[64]. IOM has the responsibility to promote inclusive and participatory implementation that considers the vulnerabilities and capacities of different groups amongst the community (i.e., men, women, boys, girls, people with disabilities, older people, marginalised groups etc.).

3.8.6. KEY MESSAGESES

1. IOM is committed to strengthening disaster preparedness at the community level because well-designed CBDP can ultimately save lives or contribute to preventing significant deaths and losses in case of disaster. IOM is also a direct implementer and can engage with the communities directly in CBDP.
2. CBDP is most useful to communities before a likely hazard event or crisis. It empowers communities, local civil society and government to create and implement their own disaster preparedness measures.
3. Engaging the local leaders and the community early-on and throughout the assessment, design, implementation and monitoring of CBDP are key to promoting ownership and sustainability of CBDP projects.

    - Provides a real-time picture of the projectized activities across IOM including examples of community-based disaster preparedness. IOM Emergency Preparedness Dashboard (Ongoing Version)
- IOM (website) Global Crisis Response Platform (GCRP)
    - Presents an overview of IOM's immediate and longer-term planning and funding requirements to respond to the evolving needs of those impacted by, or at risk of, crises and displacement, On the GCRP Home Page-Dashboard tab, you can filter Disaster Prevention and Preparedness activities to see what other COs DP activities are and documents from their preparedness projects. Home | Global Crisis Response Platform

For good practices in conducting CBDP from global sources:

- CADRI (2020) Compendium of Good Practices in Community-Based Disaster Risk Management
    - Provides a collection of CBDRM good practices based on experiences from practitioners globally. CADRI Compendium of CBDRM Good Practices
- IFRC (2015) World Disasters Report – Focus on local actors, the key to humanitarian effectiveness
    - See Chapter 2: What works and what does not: capacity development for better disaster risk management. World Disasters Report

SECTION 3.9

EMERGENCY PREPAREDNESS COMPONENTS

CAPACITY DEVELOPMENT/TRAINING AND EXERCISES

© IOM 2022

3.9. INTRODUCTION - CAPACITY DEVELOPMENT/TRAINING AND EXERCISES

3.9.1. Purpose

This component of the toolkit prepares you to analyse, design, and deliver capacity development and learning projectized activities.

3.9.2. Overview

Capacity development refers to efforts to strengthen the competencies and skills of a target organization, group or community so that the target could drive emergency preparedness and response efforts in a sustainable way in the future[65].

Capacity development and learning activities can be at the group, community, organizational, regional or national level. They may encompass a wide range of activities that can involve longer-term institution and policy building. However, this toolkit section will focus on shorter-term capacity development and learning opportunities for strengthening emergency preparedness and response capacity.

Training and simulation exercises are key methods that fall under the realm of capacity development and learning. But they are not the only activities that can meaningfully contribute to strengthened capacity. Facilitation of preparedness/response planning meetings at national and local levels and community-based disaster preparedness are also valid methods for developing capacity.

It is not required but will be useful if the steps in Emergency Preparedness (EP) Toolkit components 3.01 Risk Analysis and 3.02 Preparedness and Contingency/Response Planning have already been completed before completing the steps in this component.

3.9.3. Why is it important?

- IOM is committed to improving capacity of states and communities to effectively anticipate, respond to and recover from the mobility consequences of disasters[66].
- Capacity development and learning help to ensure the people involved in emergency preparedness and humanitarian response have the knowledge, skills, and behaviours needed to carry out their roles effectively. It also promotes ownership and sustainability.
- Capacity development and training activities are most successful when using methods that are participatory, contextualised, and based on an attitude of mutual learning.

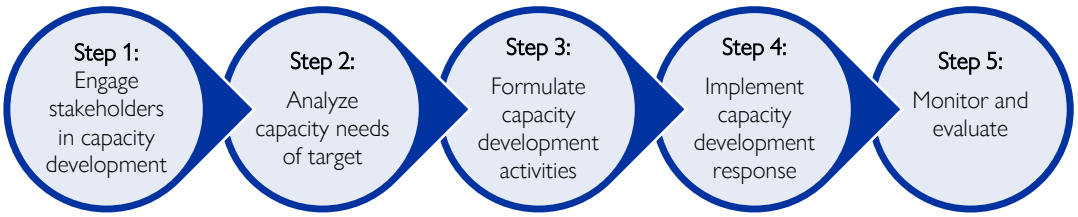

Key features of successful capacity development/training are using methods that are interactive, contextualised and based on an attitude of mutual learning. Capacity building efforts should focus on both technical and functional capacity according to leading research. An enabling environment for capacity building is another key feature that will impact the sustainability of capacity development programmes.[iii] Capacity development and learning should actively target community levels towards highly vulnerable social groups, such as migrants, within communities.

[65] Adapted from Walker, P. (2013) Annotated bibliography: Local Capacity Building for Disaster Risk Reduction. Feinstein International Center. Unpublished document.

[66] IOM Disaster Risk Reduction Report 2021: Addressing Mobility Challenges in the Context of Disasters and Climate Change: A Global Stocktake of IOM Activities in Disaster Risk Reduction (Pg. 18)

3.9.4. OVERVIEW OF STEPS

Step 1: Engage stakeholders in capacity development

For a start, there needs to be commitment to and sponsorship of the capacity development process among all key stakeholders–local ownership and participation is critical. This requires a good understanding of the relevant actors at different levels and analysis of the critical types of stakeholders that need to be involved–ones with need, resources, information, expertise, who can influence. For more information on community engagement, see Tool 1 - Community-based Planning Manual in the Key Tools & Resources section of this toolkit component.

Step 2: Analyse capacity needs of target

To effectively increase capacity of first responders, you first need to understand what the capacity development/learning needs are in your context.

2.1. Conduct a capacity development/learning needs analysis

First, you and the relevant stakeholders can identify the two or three priorities in capacity development needs. This involves understanding what types of emergencies are happening, the impact emergencies are having on people including migrants, and the actions being taken as a result; what partners in government need to know and do in this context to engage effectively; and how effective they are. This will help you to broadly identify capacity development and learning needs. Once you understand these broad trends, you can decide which of these you will address and who your intended participants will be. You can then conduct a more detailed analysis on a more specific topic or amongst a more restricted group of participants.

The scale and scope of the analysis of capacity development needs and the amount and type of evidence you collect will depend on your context and your CO's capacity to conduct capacity development and learning activities. Your analysis does not always need to be extensive, and you can draw on secondary and existing data when it is available and relevant.

For a general introduction to the capacity development process and capacity assessments, see Tool 2 - Capacity Assessment Practice Note in the Key Tools & Resources section below.

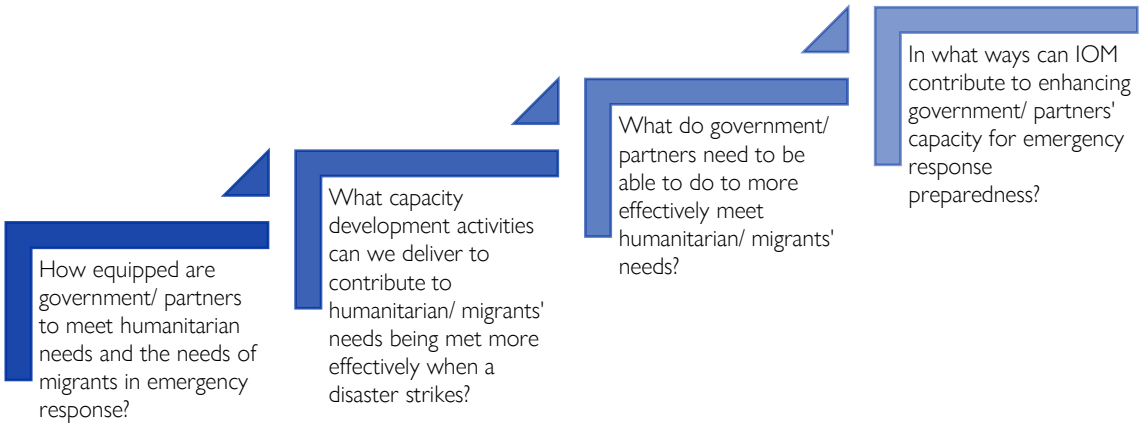

If your Country Office (CO) has existing contingency plans[67] for the risks in the context, use the completed plans as a resource for analysing capacity development needs. They can be extremely useful, because part of contingency planning is to analyse the existing capacities and gaps of government and partners to respond to emergencies.

If your CO has not yet completed contingency planning, go to the IOM Contingency Plan Template, Section – Guiding Questions to Elaborate a Contingency Plan (Pgs. 9-10). Answer the Guiding Questions as they will help you to identify gaps for emergency preparedness, some of which may be addressed by capacity development, training, and exercises of the stakeholders involved.

Below are questions for consideration when narrowing down which capacity development needs IOM can effectively address.

[67] Contingency planning (CP) is a management process that analyses disaster risks and establishes arrangements in advance to enable timely, effective, and appropriate responses. See EP Toolkit component 3.02 Preparedness and Contingency Response Planning for more information on Contingency Plans and steps for completing them.

Key questions to ask yourself for analysing capacity development needs:

Based on the responses to these questions, list out priority activities IOM can implement to enhance capacity of stakeholders to prepare for and respond to emergencies.

2.2. Analyse the intended participants of the capacity development/learning activities

Using your analysis from the previous activity, you now need to define, more specifically, who your intended participants are for the activities you defined. Your intended participants might be immigration officers, community members/migrants, civil society actors, local leaders, and/or government officials, for example. They may be grouped together for capacity building activities or separated into distinct groups with different goals and objectives.

Intended participants should be analysed considering their characteristics, learning preferences and requirements:

- Cultural context, including expectations for the capacity development/learning activity;
- Language, for example, if they are based in a field or in a head office, where they are geographically and how able they are to travel
- Roles and organizations (government, civil society)
- Access to technology and reliable internet connection, or locally available capacity development resources.
- Specific learning needs or physical requirements that may impact their ability to access the learning.

Tools for conducting capacity and learning need assessments:

Resource	Description	When to Use
Capacity for Disaster Reduction Initiative (CADRI) Digital Tool	Supports countries in their efforts to strengthen national and local capacities to reduce disaster and climate related risks by providing a bank of questions for capacity assessments.	Use for broad national-level disaster preparedness capacity assessment.
Humanitarian Learning Standards	Provides guidance and tools for capacity analysis for humanitarian learning needs and learning at organization, local and community levels (See Standard 1: Analysis and Annex 1).	Use when improved skills and knowledge of first responders will contribute to a more effective response.
National Contingency/ Response Plans	Review any anticipated gaps in response to determine whether capacity development/learning for first responders would contribute to more effective response.	Use when contingency/ response planning has already been undertaken and documents are accessible through the cluster/sector system, or government specific contingency plans or on PreventionWeb – National Platform site.
International Federation of the Red Cross (IFRC) Vulnerability, Capacity Analysis (VCA) with Reference Sheets	Provides information on how to conduct a VCA with tools to help you carry out your own VCA exercises with communities.	Use for grassroots community-level analysis.

You can find links for the above resources in the Additional Tools & Resources section below.

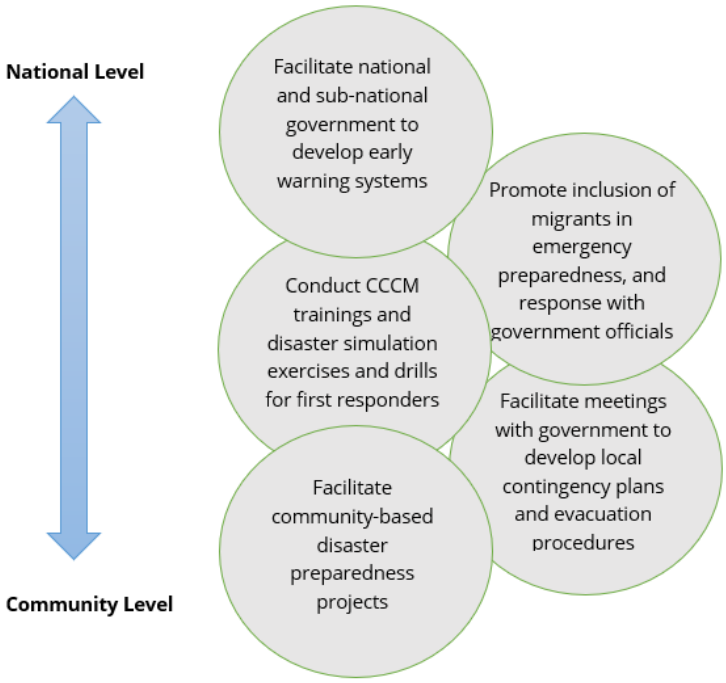

Step 3: Formulate the capacity development activities

In response to the analysis of capacity needs, projectized activities need to be formulated with the active participation of those who were engaged in the assessment exercise. For general guidance on the process of designing capacity development projectized activities, see Tool 3 – Capacity Building Simplified: A Reference Guide and Toolkit which provides a framework and toolkit from IOM's approach to capacity development in Afghanistan.

Capacity development projectized activities will likely include a mix of actions, probably starting with some short-term interventions such as trainings and drills that will enhance known capacity. These may set the groundwork for addressing more complex or long-term capacity issues or needs in the future. An effective capacity development design will identify evidence and indicators against which progress can be measured, outcomes signifying the desired changes in capacity. An **exit strategy** also needs to be considered.

See below for some examples of IOM's previous work in capacity development and learning projectized activities.

Examples of IOM capacity development and learning activities[68]

To read more about IOM's capacity development for disaster response experience around the world, see the report "Taking Sendai Forward – IOM Progress Report on DRR (Disaster Risk Reduction) and Resilience 2018". The link can be found in the Additional Tools & Resources section below.

3.1. Define the goals and objectives of the capacity development/learning activities

Objectives for your capacity development/learning activities should be defined as a whole and for its component parts. Objectives are important because they are a mechanism for ensuring the capacity development/training addresses your audiences' needs, they facilitate the measurement of progress, and they help ensure consistency of delivery especially if you are delivering the activities more than once.

3.2. Design and plan capacity development/learning activities

There is a plethora of existing emergency preparedness and mobility issues training available from IOM and other global and local sources. Therefore, it is more effective and efficient to select and adapt capacity development/training materials than create them from scratch. In this step, you will need to identify appropriate content to reach your capacity development goals and adapt it to the context in which you are working.

To ensure ownership and sustainability of the capacity development/ learning activities prioritise the active engagement of stakeholders in the design of the projectized activities and adapt them accordingly. Review any training content that you select to ensure it is up-to-date, relevant to the context and reflects policies and real-life practices of IOM and the government (as appropriate).

Below are some tips for contextualising capacity development/learning materials and events if they are not already designed for the context in which you are working.

[68] IOM (2018) Taking Sendai Forward – IOM Progress Report on DRR and Resilience 2018.

Contextualise existing capacity development/learning materials by:

- Using examples and case studies from areas that are relevant to the participants and which reflect likely scenarios in the areas in which they are working. It may also include making character and place names familiar to the local context
- Ensuring meetings and learning activities consider cultural norms in local contexts; for example, a lively icebreaker may be appropriate with some groups but may make others feel uncomfortable.
- Altering the agenda to conform to local expectations regarding break times, catering, local practicalities (rush hour traffic), and religious and cultural needs (e.g., prayer time).

If you are conducting facilitated and face-to-face capacity development/learning events, ensure that the facilitator incorporates opportunities for the participants to share and reflect their own knowledge and experience. Adults learn most effectively when they can assimilate new knowledge with existing knowledge. Sharing experiences during facilitated learning also creates opportunities for peer-to-peer learning which can enrich the learning experience for participants. It may also foster productive and supportive relationships and better communication and coordination in emergency preparedness and response.

Below is a list of recommended resources for designing, planning, and managing capacity development and learning activities. There are resources that focus more specifically on mobility issues and others that directly address disaster and response preparedness. Select those tools most relevant to the capacity development/learning needs you identified in the previous step.

Tools for designing, planning, and managing capacity development/learning activities

Resource	Description	When to Use
Humanitarian Learning Standards	Provides standards and guidance for analysing learning needs and designing and managing high quality learning programmes in the humanitarian sector based on global consultations with organizations involved in capacity development/learning.	Use to plan for capacity development programmes involving training and exercises.
Population Refugees & Migration (PRM) Regional Migration Program Exchange	Repository of disaster/crisis response training and tools in different languages.	Use to identify and plan for capacity strengthening and training of government and civil society actors.
Migrants in Countries in Crisis (MICIC) Initiative	Contains guidelines and training materials that can be used in early warning, evacuation, and preparedness for migrants.	Use for designing migrant-specific learning events.
Seeds for a Safer Tomorrow Toolkit	Contains guidance for designing disaster preparedness learning activities for children and youth in line with the Sendai Framework for Action.	Use when your intended participants are children and youth.
SIMEX (Simulation Exercises) Best Practice Implementation Guide	Provides a practical roadmap for conducting migrant-inclusive simulation exercises including lessons learnt from previous IOM regional migration programmes.	Use when simulation exercises will form part of the capacity development/learning programme
Words into Action: Design and Conduct Simulation Exercises	Consists of three sections with general information, simulation exercises process and existing guidelines in accordance with the Sendai Framework for DRR 2015-2030.	Use when larger-scale simulation exercises will form part of the capacity development/learning programme

Links to these resources and more can be found in the Additional Tools & Resources section below.

Step 4: Implement capacity development activities

In this step you will carry out the capacity development and learning activities you designed and planned in the previous step. It involves ensuring that the activities are delivered according to the objectives you defined and in a way that treats all learners with regards to their dignity and well-being.

4.1. Deliver capacity development/learning activities as agreed

Ensure that any facilitators, mentors and coaches have the final agreed content for the capacity development activity. For larger projectized learning activities you may conduct "pilot" training to test materials and then make further adjustments before launching to a wider audience.

To ensure consistency in delivery of more complex capacity development programmes, you may also elect to conduct a Training-of Trainers workshop where facilitators have an opportunity to practice delivering sessions in a safe environment where they can receive feedback from a master facilitator and their peers.

4.2. Support participants throughout the activities to meet the objectives

The facilitator plays a key role in offering support to participants, for example, when someone faces technical, logistical or practical issues that may prevent them from engaging with the activities.

For meetings and learning activities, you should try to provide appropriate support and reasonable adaptations which may be required for participants with disabilities or people who may have barriers related to their gender, age, or language challenges.

Participants in your activity should always be aware of how they can contact the facilitator/IOM representative to request support.

4.3. Draw on participants' knowledge and experience

In line with how adults learn, it is important to draw on learners' knowledge and experience during the delivery of learning. This serves the purpose of improving learning outcomes as participants are more likely to learn effectively if they can link the subject to their existing knowledge. It also allows for a richer experience for learners as the content can be brought to life with real-life examples which the group can discuss and individual learners can reflect on.

4.4. Take steps to mitigate safety and security risks to participants

Some capacity development and learning activities are riskier than others. For example, a disaster response simulation is used to put learners into difficult and uncomfortable positions to prepare them in case this type of situation were to happen to them in real life. It is important that any stress faced by learners is within reasonable limits so that it contributes to their learning rather than distressing them. Also be aware that some simulations of violence or trauma could trigger flashbacks and reasonable efforts should be made to ensure the well-being of participants.

Step 5: Monitor and evaluate

To ensure that inputs are being transformed into capacity development outputs and to support effective "learning from doing," implementation needs to be flexible, and it needs to be monitored. This includes allowing processes to evolve and paying attention to unplanned consequences that may not have been anticipated and means having the necessary flexibility to adapt to those changes.

5.1. Design monitoring and evaluation framework and select tools

To complete this step, you need to have mechanisms in place and designated people for eliciting and responding to feedback from participants. The afore-mentioned resources for planning and designing capacity development/learning programmes contain guidance and further information about monitoring and evaluation. Of note, are several monitoring and evaluation tools provided in the Capacity Building Simplified - Reference Guide and Standard Toolkit; and Humanitarian Learning Standards – Evaluation and Accountability Standard (See links in Tools & Resources Sections below.)

5.2. Implement monitoring and evaluation plans

Monitoring is an ongoing process to measure progress towards your capacity development objectives. Monitoring allows you to check whether services are being implemented as planned and to identify emerging trends or problems in capacity development/learning activities.

It is important that learners can make a complaint if a learning programme is not delivered as planned. Any complaints you receive should be used to help improve the quality and consistency of your services. All complaints should be acknowledged, and the complainant informed of when they can expect a response. A response should be given within the specified timeframe and a record should be kept of all complaints made, including the time taken to respond, the response given, and how the complaint was resolved. For more information, See Standard 8.3 in Humanitarian Learning Standards.

Evaluation is done periodically or at set points in time, normally at midpoint and at the end of the programme and it aims to assess your achieved results against the aims and objectives you set at the beginning of the projectized activity.

3.9.5. ROLES AND RESPONSIBILITIES

- Government role

The government, typically the Department of Civil Protection and National Disaster Management Authorities is the primary entity and duty bearer for emergency preparedness and response at national and local levels. When the government requires external support with regards to capacity development and learning, they may invite support from international partners.

- Partners and inter-agency role

The United Nations (UN) and other international and local partners can offer to support the efforts of government in preparedness and contingency/response planning through capacity development and learning activities. It is the responsibility of partners to ensure that any capacity development plans are closely coordinated with government and aligned to national policies and plans.

- IOM role

The role of your CO is to support the efforts of government, partners and migrants/community members to prepare for and respond to disasters and human mobility issues by providing facilitation services and expertise on capacity analysis, capacity development/learning activity design, implementation, monitoring, and evaluation.

3.9.6. KEY MESSAGES

1. Capacity development, training and exercises help to ensure that stakeholders in disaster response are equipped with the right skills, knowledge, and behaviours, in other words – the capacity, to perform their roles.
2. Capacity development and learning activities for emergency preparedness and response are most impactful if carried out in the months and weeks before a disaster happens. Relevant stakeholders to the capacity development issues you are addressing should be involved at all stages to ensure ownership and sustainability of your activities.
3. Engaging key stakeholders throughout any capacity development/learning activity and contextualising materials are essential factors for ensuring ownership, sustainability, and effectiveness of your projectized activities.

3.9.7. KEY TOOLS & RESOURCES

TOOL 1 – IOM (2022) Participation in Practice: Community-Based Planning Manual

- Provides detailed step-by-step guidance for community-based assessment, planning, and recovery processes. Participation in Practice: Community-Based Planning Manual

TOOL 2 – United Nations Development Program (UNDP) (2008) Capacity Assessment Practice Note

- Explains the basics of capacity assessments and includes a review of organizational assessment tools and UNDP tool to assess the enabling environment/national level capacity. United Nations Development Program (UNDP) (2008) Capacity Assessment Practice Note

TOOL 3 – IOM/Government of the Islamic Republic of Afghanistan (GoIRA) (2015) Capacity Building Simplified – A Reference Guide and Toolkit

- Developed by IOM and the government of Afghanistan, this document provides a standardised framework and toolkit for managing, monitoring and evaluating capacity development projects. Capacity Building Simplified – A Reference Guide and Toolkit

3.9.8. ADDITIONAL TOOLS & RESOURCES

For conducting capacity and learning needs assessments:

- Capacity for Disaster Reduction Initiative (CADRI) (website) CADRI Tool for DRR Capacity Diagnosis and Planning
  - Supports countries in their efforts to strengthen national and local capacities to reduce disaster and climate related risks by providing a bank of questions for capacity assessments. CADRI Tool for DRR Capacity Diagnosis and Planning
- IOM (2020) Guidance Note: Preparedness for Emergency Response in IOM: Annex 3
  - Annex 3 provides information on how to complete the contingency response plan and the Contingency Plan template. Guidance Note: Preparedness for Emergency Response in IOM: Annex 3
- HPass (2019) Humanitarian Learning Standards
  - Provides standards and guidance for conducting high quality learning programmes in the humanitarian sector based on global consultations with organizations involved in capacity development/learning. Humanitarian Learning Standards
- PreventionWeb (website) National Platforms
  - Provides declared national coordinating multi-sectoral and inter-disciplinary mechanisms for advocacy, coordination, analysis and advice on DRR. PreventionWeb - Continents & Countries
- IFRC (2007) VCA Toolbox with Reference Sheets
  - Provides information on how to conduct a vulnerability and capacity analysis (VCA) with tools to help you carry out your own VCA exercises with communities. VCA Toolbox with Reference Sheets

For designing, monitoring and evaluating capacity development/learning projectized activities:

- HPass (2019) Humanitarian Learning Standards
  - Provides standards and guidance for conducting high quality learning programmes in the humanitarian sector based on global consultations with organizations involved in capacity development/learning. Humanitarian Learning Standards
- IOM (2020) IOM Crisis Simulation Exercise in Burkina Faso
  - This is a video example which demonstrates how IOM conducted simulation exercises in Burkina Faso to strengthen crisis preparedness in West and Central Africa. IOM Crisis Simulation Exercise in Burkina Faso
- IOM (website) IOM PRM Regional Programme Exchange
  - Gives access to a repository of training materials from IOM and other providers for early warning and evacuation aimed at different stakeholder groups. PRM Regional Migration Program Exchange
- IOM (website) Migrants Caught in Countries of Crisis (MICIC) Repository of Tools
  - Contains guidelines and training materials that can be used in early warning, evacuation and preparedness for migrants. PRM Regional Migration Program Exchange - MICIC
- Seeds for a Safer Tomorrow – For Promoting Cross-Generational Dialogues and Actions Towards Sendai Framework Implementation
  - Contains guidance for designing disaster preparedness learning activities for children and youth in line with the Sendai Framework for Action. Seeds for a Safer Tomorrow Toolkit
- IOM (ND) Supporting Migrant Inclusive Emergency and Crisis Simulation Exercises
  - Provides a practical roadmap for conducting migrant-inclusive simulation exercises including lessons learnt from previous IOM regional migration programmes. Supporting Migrant Inclusive Emergency and Crisis Simulation Exercises
- United Nations Office for Disaster Risk Reduction (UNDRR) (2020) Words-into-Action: Design and conduct simulation exercises
  - IOM, in cooperation with governments, organizes cross-border simulations to strengthen crisis preparedness in West and Central Africa. Through these exercises, key actors can test their levels of preparedness, coordination and response to real-life crisis. situations. Words-into-Action: Design and conduct simulation exercises.

SECTION 3.10

EMERGENCY PREPAREDNESS COMPONENTS

INSTITUTIONAL AND LEGISLATIVE FRAMEWORKS

© IOM 2022

3.10. INTRODUCTION - INSTITUTIONAL AND LEGISLATIVE FRAMEWORKS

3.10.1. Purpose

This component of the toolkit prepares you to engage with institutional and legislative frameworks that impact internal and external emergency preparedness (EP) actions.

3.10.2. Overview

IOM adheres to humanitarian principles and is a formal and full member of the United Nations (UN) response and coordination system for humanitarian crises. IOM is further bound and committed to the existing legal and institutional frameworks contributing to the effective delivery of assistance and protection and ultimately to the respect and promotion of human rights and humanitarian principles[69].

Institutional frameworks refer to the rules, norms, and strategies adopted by individuals operating within or across organizations that shape activities and behaviours.

Legislative frameworks are comprised of national or international laws which provide key principles, duties, obligations, and rights of each duty holder. The implementation of laws is supported by more detailed regulations, codes of practice and guidance.

This toolkit component introduces the key institutional and legislative frameworks that inform EP and provides steps on how to engage with them.

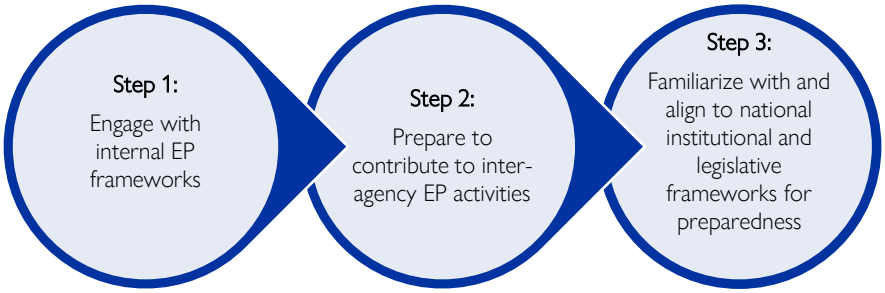

3.10.3. Why is it important?

- IOM Country Offices (COs) do not need to become experts in institutional and legislative frameworks. However, to fully engage in EP work across different levels, it is helpful to be familiar with key internal and external institutional and legislative frameworks that inform EP.
- Implementing IOM's internal frameworks and participating in information-sharing between the CO/Regional Office (RO)/Headquarters (HQ) can help ensure that you are aligned with organizational priorities and norms.
- A strong understanding of internal frameworks can strengthen your position to progress to inter-agency level and national and regional level EP work. Being familiar with the key global, regional, and national institutional and legislative frameworks helps your CO to better support government in EP activities and to access inter-agency funding streams.

[69] IOM (2021) Migration Crisis Operational Framework (MCOF)

3.10.4. OVERVIEW OF STEPS

Step 1: Engage with internal EP frameworks

The four key resources to engage with internally are the Global Crisis Response Platform (GCRP), the Migrants in Countries in Crisis (MICIC) initiative, and the EP Dashboard. See a brief description of each resource below followed by the activities you need to undertake to engage with them. These three frameworks can be found in the Key Tools and Resources section below.

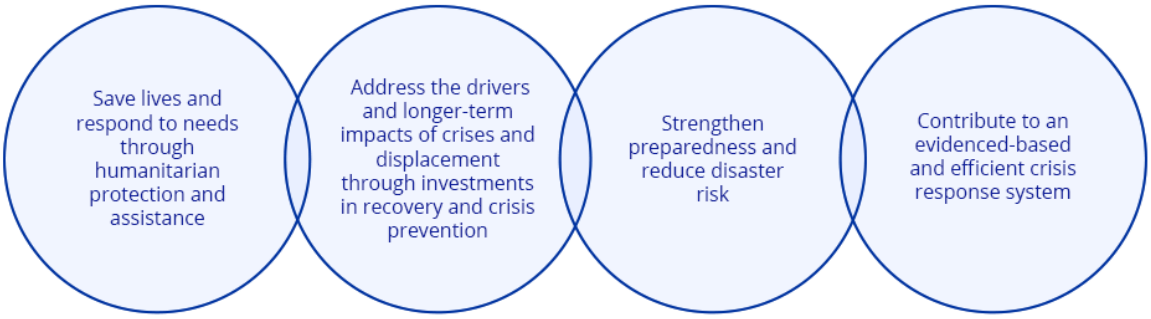

Internal EP Frameworks

GCRP	MICIC Initiative	EP Dashboard	IOM Guidance Note
The GCRP presents an overview of IOM's immediate and longer-term planning and funding requirements to respond to the evolving needs of those impacted by, or at risk of, crises and displacement, structured around four core objectives, each with associated activity areas.	MICIC is an initiative that provides concrete and practical guidance on how to prepare for and respond to crises in ways that protect and empower migrants, leverage their capacities, and help migrants and communities recover from crises.	The EP Dashboard is IOM's central repository for preparedness information shared between the CO, RO and HQ. It provides easy access to existing country preparedness and contingency plans and a set of risk monitoring tools.	Provides information on how to conduct risk analysis and monitoring and the minimum preparedness actions (MPA) checklist.

1.1 Engage with the internal preparedness framework – the GCRP

The GCRP is how IOM responds to crises around the world. If you are not already familiar with the GCRP website, review The Global Crisis Response Platform informational video first. Then review the GCRP Home Page which gives an overview of the platform and its four core objectives.

Four core objectives of the GCRP:

Finally, on the GCRP website home page, access the Dashboard tab, where you can filter Disaster Prevention and Preparedness activities to see what other COs' disaster preparedness (DP) activities are and documents from their preparedness projects.

Ensure that you update and share your country's crisis plan, as requested, so that the RO and HQ are informed of your strategies. This can help them to build a global picture of IOM's crisis response to formulate relevant global strategies and advocate for resources.

1.2 Engage with the internal preparedness framework – the MICIC Initiative

Guideline 4 of the MICIC Initiative is the part of the framework that addresses EP. It says that IOM must consider the presence of migrants, their vulnerabilities and their potential needs in disaster preparedness and emergency response frameworks. Further, it says that COs should advocate for clear laws and policies on migrants' eligibility for different types of assistance.

Below are some of the recommended actions your CO might implement with regards to the MICIC Initiative;

- Platforms to facilitate the engagement of migrants in the design and implementation of prevention, preparedness, and emergency response systems.
- Taking migrants into account in national and local frameworks on prevention, preparedness, and emergency response, including by recognizing migrants as a specific group with needs and capacities.
- Recruitment of migrants as staff or volunteers in prevention, preparedness, and emergency response mechanisms.

Your CO should be able to articulate how your current activities and preparedness activities relate to the MICIC Initiative. This will help you to communicate and coordinate your programme with IOM at the organizational, regional, and global levels. The MICIC is designed to align with other inter-agency frameworks including the cluster system to facilitate joint working and coordination.

Of course, there are several other IOM frameworks that inform IOM's work. The IOM Emergency Manual provides a comprehensive overview of internal IOM frameworks. You can find the link to the Emergency Manual in the Additional Tools & Resources section below.

1.3 Update the Emergency Preparedness (EP) Dashboard regularly

You should become familiar with the EP Dashboard and its features so that you can fully benefit from the information provided. The Dashboard provides risk information for each IOM country globally and the disaster preparedness activities that are being carried out. You can also filter global information to find out more about the range of risks, CO capacity and the status of preparedness activities and funding. Take a moment to review the EP Dashboard introductory video which introduces the features listed above.

After you have completed risk analysis and monitoring in your country of operation, please share your findings on the EP Dashboard at least once a year for all risks and twice a year for medium and high-level risks. Where they exist, your CO can also share their contingency/response plans. The Preparedness and Response Division (PRD) will circulate a survey regularly to focal points in the COs where you will add up the main five risks by simply selecting from draw-down menus. PRD compiles the information and circulates via the Dashboard.

For step-by-step information on how to conduct risk analysis and monitoring, see EP Toolkit component 3.01 Risk Analysis. For guidance on contingency and response planning, see EP Toolkit component 3.02 Preparedness and Contingency/Response Planning and the Guidance Note: Preparedness for Emergency Response in IOM.

Step 2: Prepare to contribute to inter-agency EP activities

For this step, you will prepare for any coordinated preparedness actions with other members of the humanitarian community. This step lays out four primary global frameworks for coordinated disaster preparedness and disaster risk reduction work. Find out which of these frameworks is being applied in your country of operation and familiarize yourself with them to be able to contribute to inter-agency EP.

2.1. Familiarize yourself with inter-agency disaster preparedness frameworks

Ensure that you are familiar with the purpose, structure and content of two key inter-agency global disaster preparedness frameworks. They are:

Inter-Agency Standing Committee (IASC) Emergency Response Preparedness (ERP)	Office for the Coordination of Humanitarian Affairs (OCHA) Anticipatory Action
The ERP approach is aimed at increasing the speed and volume of life-saving assistance delivered in the first four to six-weeks of an emergency. It provides tools for the UN Country Teams and/or Humanitarian Country Teams to: • Understand risks and establish a system to monitor them; • Establish a minimum level of preparedness; • Take additional actions to ensure readiness to respond to identified risks.	Anticipatory humanitarian actions are those actions taken in advance of a crisis, before either the shock or its peak impact. Therefore, anticipatory action makes acting the default when risks, not needs, increase. The objective of anticipatory actions is to mitigate the peak impact of the shock. It is comprised of three components: • Trigger/parameters for action • Pre-agreed activities • Pre-committed financing (using allocated Central Emergency Response Fund (CERF) funding before the crisis)

See the Additional Tools & Resources section below for links to these frameworks. Depending on your country context, you may find that ERP or OCHA Anticipatory Action or both frameworks are being applied. Focus on the frameworks that are relevant in your context.

2.2. Familiarize yourself with inter-agency disaster risk reduction frameworks

For the broader, longer-term disaster risk management frameworks, familiarize yourself with the Sendai Framework for Disaster Risk Reduction (DRR) 2015-2030 and Words into Action guidance on disaster placement. They are the two main frameworks to consider for inter-agency DRR activities:

Sendai Framework for Disaster Risk Reduction (DRR)	Words into Action: Disaster Displacement: How to Reduce Risk, Address Impacts and Strengthen Resilience
This global framework is designed to support the reduction of existing levels of risk and prevent new risks from emerging. It aims to substantially reduce disaster risk and losses in lives, livelihoods and health, and in the economic, physical, social, cultural, and environmental assets of persons, businesses, communities, and countries. The risks addressed by the Sendai Framework relate to both natural and man-made hazards, and small and large-scale, frequent and infrequent, and sudden and slow-onset disasters.[vi]	Offers practical guidance to help government authorities integrate disaster displacement and other related forms of human mobility into regional, national, sub-national and local DRR strategies in accordance the Sendai Framework. It provides basic background information and highlights the various roles DRR and disaster risk management (DRM) can play in reducing, preparing for, and responding to disaster displacement. It provides a helpful Annex to pinpoint references to disaster displacement and human mobility in the Sendai Framework.

See the Additional Tools & Resources section below for links to these documents. Find out whether the humanitarian community and / or the government have adopted the Sendai Framework in your country of operation and are using it as a framework to enhance DRR.

2.3. Identify the inter-agency frameworks that are being applied in your country context and map existing CO activities to them

Where you have identified the above frameworks being used in your country context, it is good practice to be able to communicate how IOM's activities relate to them. Therefore, review your CO's preparedness, prevention, and any other related activities and identify if and how each activity aligns to ERP actions, Anticipatory Action and the Sendai Framework.

This will help you to communicate with other agencies and the government about how your CO's activities contribute to the larger global frameworks.

2.4. Identify opportunities for IOM to engage with inter-agency actors in disaster preparedness activities

Now that you are oriented to the global frameworks and know how the CO's current activities relate to them, you may look for opportunities to work in coordination with other agencies on preparedness activities.

Work on the ERP and OCHA Anticipatory Action would take place through cluster/sector coordination system, as well as in the IASC sub-working group Early Warning, Early Action and Response (EWEAR) at the global level The ERP approach is:

- Led by a Resident or Humanitarian Coordinator
- Managed by a UN Country Team or Humanitarian Country Team
- Supported by an inter-cluster/sector coordination group and clusters/sectors.

Commitment to meeting the Sendai Framework priorities would be led by the National Disaster Management Agency (NDMA), or equivalent and likely implemented through a national platform for DRR which would involve the humanitarian community.

Equipped with the knowledge of institutional frameworks, you may also identify how IOM could contribute to achieving inter-agency and national plans for improving EP.

Step 3: Familiarize with and align to national institutional and legislative frameworks for preparedness

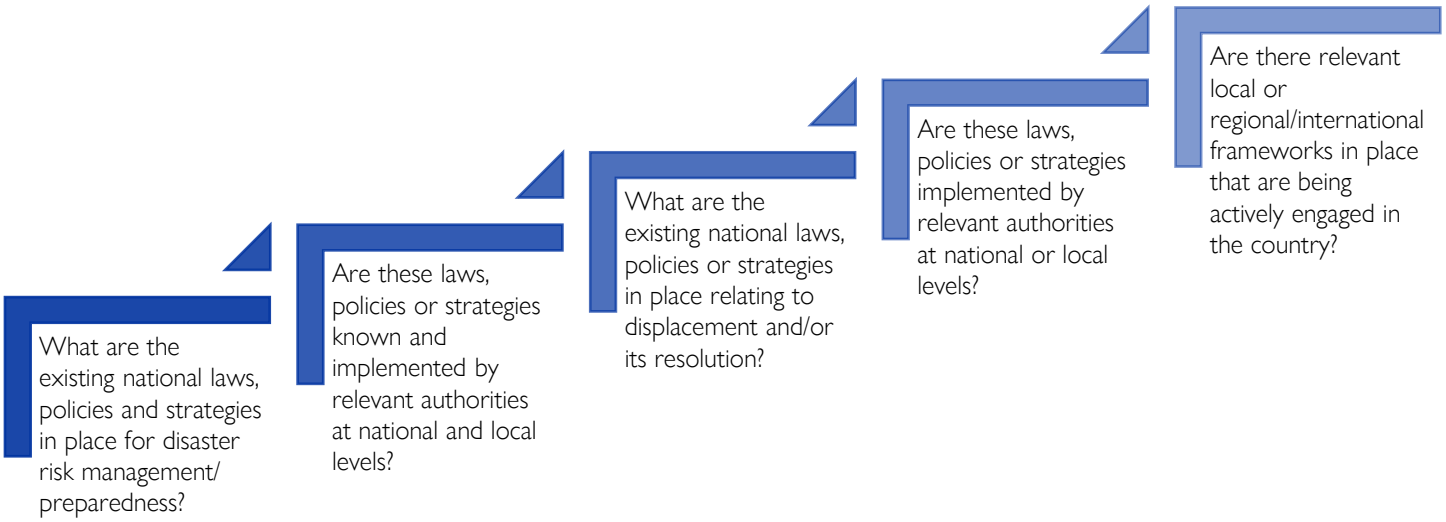

As IOM's role is to support the national and local government in EP, it is important that COs are aware of the national institutional and legislative frameworks that inform the work.

3.1. Identify existing national frameworks relevant to crisis, displacement and preparedness

For this step, you need to identify the relevant national frameworks, laws and policies that inform disaster/crisis response and laws that are specific to migrants.

Conduct desk research to identify these documents and keep a record of them in a distinct file that is accessible to the CO staff.

Key questions to guide your desk review of relevant national institutional and legislative frameworks for EP[vii]

Your research should include available funding mechanisms through National Plans of Action or regional and international agreements to ensure you are fully aware of funding streams for EP.

A good starting place for identifying disaster management laws and policies for your country of operation is PreventionWeb's National Platform. A national platform for DRR is a generic term for national mechanisms for coordination and policy guidance on disaster risk reduction that are multi-sectoral and inter-disciplinary in nature, with public, private and civil society participation involving all concerned entities within a country[70]. You can find the link to PreventionWeb National Platforms in the Additional Tools & Resources section below.

3.2. Identify how IOM can advocate for migrants in EP and response

On a practical level, engaging with external institutional and legislative frameworks could help to support:

- Establishing a national, state, and district disaster management authorities and their mandates;
- Establishment of funding / budgets for emergency response and DRR at the national, state and district levels;
- Establishing rights of voluntary sector actors to be involved in disaster response;
- Waive customs tax on humanitarian assistance coming in from international non-government organizations (NGOs) and UN.

[70] UNDRR (2017) Words into Action Guidelines: National Focal Points for DRR; National Platforms for DRR: Local Platforms for DRR

3.10.5. ROLES AND RESPONSIBILITIES

- Government role

Government support is required to create and implement a conducive institutional and policy environment to encourage disaster preparedness. While central government retains the responsibility to create the policy environment and financing mechanisms, local governments are best placed to provide the needed support: they have a clear mandate to engage communities; they control local finance; they can provide technical support in the design and construction of community disaster preparedness infrastructure.

- Partner and inter-agency role

Where there is an established inter-agency cluster/sector coordination structure in operation, the cluster/sector leads support the government in coordination of emergency response preparedness. They may support the government to formulate and implement national policies strategies and procedures with regards to disaster risk management and emergency preparedness. OCHA may also work with governments in implementing Anticipatory Actions etc.

- Civil society and community role

Civil society and community members, provide specific knowledge and pragmatic guidance in the context of the development and implementation of normative frameworks, standards, and plans for disaster preparedness[71].

- IOM role

The role of the IOM CO is to internally engage in the implementation of the MICIC Initiative and share disaster preparedness activities through the EP Dashboard and the GCRP. Your CO can also engage in local, national, regional, and global plans and strategies for EP with government, with the humanitarian community and with local communities. IOM should promote an inclusive culture of preparedness and education on disaster risk both internally and externally.

3.10.6. KEY MESSAGESES

1. Knowledge and understanding of the key institutional and legislative frameworks for EP equips the CO to effectively prioritize EP activities, engage inter-agency and national stakeholders, and better access available funding streams.
2. Engagement with institutional and legislative frameworks is an ongoing activity done by the emergency focal point and senior management within the mission. It empowers COs to contribute to collective EP with other cluster/sector members and national and local government.
3. COs should first ensure they are effectively implementing internal operational frameworks, and then progress to engaging with external frameworks and inter-agency working.

[71] UNDRR (2015) Sendai Framework for Disaster Risk Reduction.

3.10.7.KEY TOOLS & RESOURCES

TOOL 1 – Migrants in Countries in Crisis (MICIC) (2016) Guidelines to Protect Migrants in Countries Experiencing Conflict or Natural Disaster

- Provides concrete and practical guidance on how to prepare for and respond to crises in ways that protect and empower migrants, leverage their capacities, and help migrants and communities recover from crises. Guidelines to Protect Migrants in Countries Experiencing Conflict | Migrants in Countries in Crisis (MICIC)

Tool 2 – IOM (website) Emergency Preparedness (EP) Dashboard

- Provides information on operational support needs, inter-agency partnerships, knowledge management and reporting on emergency preparedness at IOM. IOM Emergency Preparedness Dashboard (Ongoing Version)

Tool 3 - IOM (website) Global Crisis Response Platform (GCRP)

- Presents an overview of IOM's immediate and longer-term planning and funding requirements to respond to the evolving needs of those impacted by, or at risk of, crises and displacement. Home | Global Crisis Response Platform

3.10.8.ADDITIONAL TOOLS & RESOURCES

For overviews of relevant IOM and global frameworks:

- IOM (website) IOM Emergency Manual
  - Provides guidance to IOM staff on processes and procedures related to deployment, operations, programmes support, resource management, staff & security and the frameworks that inform IOM's work. Also gives overviews of IOM's internal and external frameworks. IOM Emergency Manual
- IOM (website) Guidance Note: Preparedness for Emergency Response in IOM
  - Provides information on how to conduct risk analysis and monitoring and the minimum preparedness actions (MPA) checklist. IOM Emergency Manual

For inter-agency institutional frameworks:

- Office for Coordination of Humanitarian Affairs (OCHA) (website) Anticipatory Action Toolkit

ELEMENTS OF EMERGENCY PREPAREDNESS

SUMMARY/LIST OF PREPAREDNESS ACTIVITIES

© IOM 2023

4. ELEMENTS OF EMERGENCY PREPAREDNESS

4.1. INTRODUCTION - SUMMARY/LIST OF PREPAREDNESS ACTIVITIES

4.1.1. Purpose

This element of the toolkit aims to clarify the difference between emergency preparedness (EP) and disaster risk reduction (DRR) activities and to demonstrate the variety of activities IOM country offices (COs) are conducting in these areas.

4.1.2. Comparison between EP and DRR projects

It is sometimes challenging to distinguish what is meant between the terms EP and DRR because donor agencies and others may use terminology differently. It is important to distinguish the terminology at a technical level relying on specific guidance for engaging distinct of donors. However, when representing IOM as a whole externally, we need to refer to EP and DRR projects as "DRR and Preparedness work." In other words, there are some technical specificities, but we should not appear to conduct EP and DRR in silos.

This section provides information on how IOM Preparedness and Response Division (PRD) makes this distinction. Below are definitions of the terminology we will discuss in this section.

Preparedness is the knowledge and capacities developed by governments, response and recovery organizations, communities, and individuals to effectively anticipate, respond to, and recover from the impacts of likely, imminent, or current disasters.

Disaster risk reduction is aimed at preventing new, reducing existing disaster risk, and managing residual risk, all of which contribute to strengthening resilience and therefore to the achievement of sustainable development. *Disaster risk reduction is the policy objective of disaster risk management, and its goals and objectives are defined in disaster risk reduction strategies and plans.* Preparedness is a component of disaster risk reduction[72].

Emergency Preparedness focuses on increasing the readiness, namely the speed, volume, and quality of the emergency response[73].

If you would like to read more about disaster and preparedness terminology, refer to component 2.02 Overview of Emergency Preparedness.

When creating an EP project, you will need to consider how to assign it a financial code. The table below is designed to help you differentiate between activities with an EP Code and DR Codes. To keep it simple, it is perfectly fine to have a project with an EP Code and DR secondary code, and vice-versa. The main code should be assigned based on the spirit of the project, either short-term (EP, increase readiness to respond) or mid/long-term (DR, Reduce Risk).

[72] IOM (2020) An IOM Introduction to Emergency Preparedness, Self-Study (p. 3)
[73] Ibid

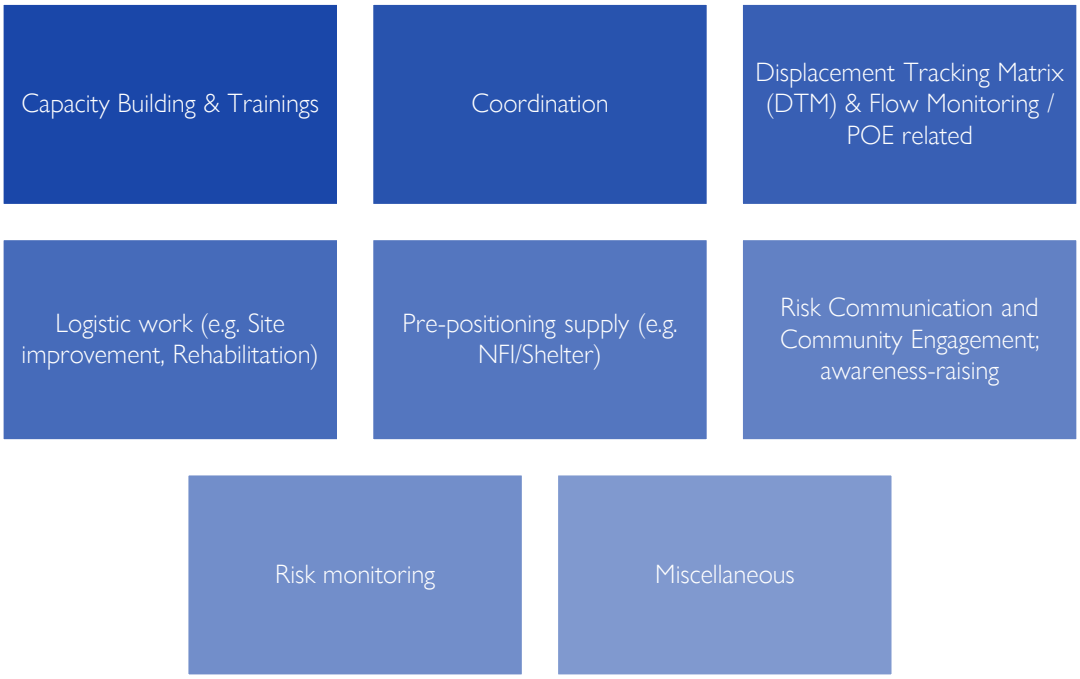

Comparison of projects under EP and DR Codes[74]

	EP Code	DR Code
Structure	Falls under the Preparedness and Response Division (PRD) within the Department of Operations and Emergencies (DOE). Projects under EP should also coordinate when relevant with DRR focal points (DR Code, under Migration, Environment Climate Change and Risk Reduction Division (MECR) Division/DPDC Department) to ensure complimentary activities and synergies in interventions	Falls under MECR within the Department of Peace and Development Coordination (DPDC) Projects under DRR should coordinate with relevant sectors within PRD such as Water, Sanitation and Hygiene (WASH), Shelter and Settlements, and Camp Coordination and Camp Management (CCCM) to ensure complimentary activities and synergies in interventions
Description	This project type focuses on preparedness activities which aim to build the capacities and improve the ability of IOM and key stakeholders (e.g., governments, professional response organizations, communities, and individuals) to anticipate and effectively respond to the impact of imminent, or current hazards, events, or conditions.)	This project type supports the efforts of individuals, communities, and Member States to reduce disaster risk and promote the effective role and inclusion of migrants in all phases of risk reduction, resilience-building, and recovery. IOM's DRR programming provides planning and operational responses to disaster risk associated with slow- and sudden-onset natural hazards posing disaster and displacement risk, including extreme climate events, as well as technological and biological hazards.
Sample activities	• Strengthening internal and inter-agency preparedness at global, regional, and national levels (activities done before a potential emergency that would increase the speed, volume, and quality of the initial phase of an emergency response if the risk materializes • Developing the preparedness capacities of government and non-governmental partners at national and local levels to improve humanitarian response. • Contingency planning. • Strengthening the capacities of various stakeholders to assist migrants in countries in crisis (MICIC).	• Hazard mapping, multi-hazard risk assessments, community-based disaster risk management, risk-mitigation infrastructure, planning and implementation of relocation, resilient livelihoods development and DRR policy and strategy • Support to "build back better" goals in recovery and reconstruction through integration of DRR measures into the restoration of physical infrastructure and social and governmental systems, and into the revitalization of livelihoods, economies, and the environment • Related efforts would include the engagement of migrants and migrant communities in efforts to reduce disaster risk, improve participation in planning and in recovery efforts.
Key Institutional Frameworks	• MICIC Initiative[75] • IASC Emergency Response Preparedness Guidelines[76]	• Sendai Framework for Disaster Risk Reduction (DRR) 2015-2030[viiiix]
Specifically Related EP Toolkit Components[x]	• Preparedness and Contingency/Response Planning • 3.07 Early Warning Systems • 3.08 Community-Based Disaster Preparednes • 3.09 Capacity Development/Training and Exercises	• 3.03 Emergency Services/Response Mechanisms and Strategies • 3.10 Institutional and Legislative Frameworks

[74] IOM (2022) Standard Project Types and Descriptions
[75] Migrants in Countries in Crisis (MICIC) (2016)
[76] IASC (2015) Emergency Response Preparedness (ERP) Guidelines

4.1.3. List of IOM EP Activities

A spreadsheet with the list of IOM EP project activities uploaded from the EP Dashboard in 2022 is provided here. This spreadsheet shows individual country activities organised by category/type of preparedness activities including:

You can always check the EP Dashboard for examples on the EP activities IOM COs are implementing around the world.

4.1.4. Summary of IOM DRR Activities

You may also find it useful to read a summary of IOM's recent work in DRR in the IOM Disaster Risk Reduction Report 2021: Addressing Mobility Challenges in the Context of Disasters and Climate Change: A Global Stocktake of IOM Activities in Disaster Risk Reduction.

SECTION 4.2

ELEMENTS OF EMERGENCY PREPAREDNESS

CROSS-CUTTING ISSUES IN EMERGENCY PREPAREDNESS

© IOM 2022

4.2. INTRODUCTION - CROSS-CUTTING ISSUES IN EMERGENCY PREPAREDNESS

4.2.1. Purpose

This element of the toolkit helps you to integrate cross-cutting issues into emergency preparedness (EP) activities.

4.2.2. Overview[77]

Emergency preparedness includes activities that empower people to prepare for the disaster risks in their context, but it is important that we recognize that the people we serve face different risks and different levels of risk based on their age, sex, gender identity, nationality, race, ethnic allegiance, etc. That is why it is so important that all EP activities reflect and address the needs of different groups. For example, in the process of risk analysis, we should include analysis of the vulnerabilities and capacities of a community, but also sub-groups within the community such as migrants, people with disabilities, women, children and other marginalised groups. Preparedness, contingency response planning and projectized EP activities such as community-based disaster preparedness, supporting early warning systems, capacity development and trainings should also reflect the differing needs of marginalized population groups through protection mainstreaming.

Protection Mainstreaming is the process of incorporating humanitarian protection principles across all sectors of intervention at strategic and operational levels, thorough assessments and analysis and by integrating protection principles before, during and after a crisis. In addition, during a crisis there tends to be a breakdown of social structures where certain dynamics become more prominent (i.e., gender-based violence and sexual exploitation and abuse where, for instance, sexual assault is used as a weapon of war). Putting these factors into consideration, we need to ensure that protection mainstreaming is considered before a crisis so humanitarian needs can be more comprehensively met.

Protection mainstreaming includes IOM's commitments to mainstream the prevention of and response to gender-based violence (GBV) and disability inclusion into its activities, as well as reflecting IOM's commitments related to accountability to affected populations (AAP) and preventing and responding to sexual exploitation and abuse (PSEA).

4.2.3. Why is it important?

- If EP project activities integrate protection principles, then the response is much more likely to comprehensively meet the needs of crisis affected populations when a disaster strikes.
- IOM is committed to the protection of people affected by crisis through its four protection mainstreaming principles: 1) Prioritize safety and dignity and avoid causing harm, 2) Secure meaningful access, 3) Ensure accountability and 4) Ensure participation and empowerment.[78]
- In its Statement on the Centrality of Protection (2013) and its Protection Policy (2016), the IASC affirms that the *"Protection to all affected and at-risk persons has to inform humanitarian decision making and response, and be central to preparedness efforts, as part of immediate and life-saving activities, and throughout the duration of humanitarian response and beyond. Thus, calling out humanitarian actors that their responses must be driven by the needs and perspectives of affected persons, with protection at its core*[79]*.*

4.2.4. Integrating cross-cutting issues into emergency preparedness

Below are the distinct areas of protection with their definitions and a brief overview of activities CO's may undertake to ensure protection of migrants and crisis-affected people in EP activities. Links to further information are also provided for each area.

4.2.5. Protection

Protection mainstreaming[80] in emergency preparedness includes working to minimize any unintended negative consequences ("do no harm") in the assessment and implementation of activities. For example:

- Prioritizing the safety and dignity of the affected individuals and communities in all EP activities such as community-based disaster preparedness activities and capacity development, training and simulation exercises.
- Ensuring meaningful access to preparedness activities and information without discrimination. For example, ensure trainings and simulation exercises are designed to include marginalised groups in roles of responsibility and as active participants

[77] Adapted from IOM: Protection Mainstreaming (sharepoint.com)
[78] IOM Emergency Manual https://emergencymanual.iom.int/protection-mainstreaming
[79] IOM Emergency Manual Protection Overview | Emergency Manual (iom.int)
[80] IOM (ND) Protection Mainstreaming in IOM's Response to Migration Crises

wherever possible. Ensure learning events are designed in line with cultural norms (religious needs, separation of males/females, in accessible venue in terms of location). In delivering trainings, training materials and public awareness messages, use communication channels and languages/pictographs that will be accessible understood by all groups, including different marginalised groups.

- Fostering participation and empowerment through inclusive risk analysis, contingency/response planning and development of early warning systems.
- Holding IOM accountable to affected populations through complaints and feedback mechanisms and two-way communication, thus contributing to the respect and fulfilment of rights.

For more information and resources available on Protection, follow the link: Protection Overview | Emergency Manual (iom.int)

4.2.6. AAP

AAP can be defined as an active commitment by humanitarian actors to use power responsibly by taking account of, giving account to, and being held to account by the people they seek to assist.

To ensure your CO integrates AAP principles into EP activities, your CO can take steps regarding the following categories:

- **Leadership:** Ensure the IOM CO leadership supports emergency preparedness and takes a leading role in promoting risk analysis and emergency preparedness and contingency/response planning.
- **Information-sharing and transparency:** Openly and proactively share risk monitoring and preparedness information with people at risk of disasters and implement two-way communication so their opinions and concerns are taken into account.
- **Participation:** Involve at-risk populations to influence and shape the design, implementation, monitoring and evaluation of EP activities and decision-making processes throughout the full project cycle.
- **Complaints and feedback mechanism:** Establish diverse and contextually appropriate mechanisms that enable communities to provide feedback on EP programs and submit complaints, and that activate appropriate processes and procedures to provide a timely response.
- **Partner coordination:** Collaborate with peers and partners to deliver on AAP principles and commitments in a coordinated and coherent way, including collective responsibility in inter-agency contexts.

For more information and resources available on AAP, follow the link: Accountability to Affected Populations (AAP) | Emergency Manual (iom.int)

4.2.7. Disability Inclusion

Persons with disabilities include persons who have long-term sensory, physical, psychosocial, intellectual or other impairments that, in interaction with various barriers, prevent them from participating in, or having access to, humanitarian programmes, services or protection. IOM's work needs to lower or remove the barriers that persons with disabilities face in order to address the level of risk faced by the individual or affected population. IOM's work should also identify and improve the enablers (or facilitators) that persons with disabilities have to increase their resilience, safety and protection.

Below are general actions to undertake during your programming to ensure you are addressing disability issues in EP and response[81][xi]:

- Consult, include and partner with disability focal points, persons with disabilities and Organizations for Persons with Disabilities (OPD) that represent the diversity of persons with disabilities during all stages of disaster risk reduction and emergency preparedness programmes.
- Organize awareness-raising and capacity development on inclusion of persons with disabilities for staff and partners, in partnership with OPDs.
- Support OPDs to build and strengthen their capacity to work in humanitarian action at all levels: administrative, human resources, accountability, financial management, proposal-writing.[xii]
- Ensure that contingency plans, early warning systems and evacuation procedures consider the special needs that people with disabilities may have (i.e., those with physical and mental limitations that may impact their ability to move quickly to a place of safety).

For more information and resources available on Disability Inclusion, follow the link: Disability Inclusion | Emergency Manual (iom.int)

Another useful resource for disability inclusion in preparedness activities is the IASC (2019) Guidelines: Inclusion of Persons with Disabilities in Humanitarian Action, which sets out essential actions that humanitarian actors must take to effectively identify and respond to the needs

[81] IASC (2019) Guidelines: Inclusion of Persons with Disabilities in Humanitarian Action, (p. 61)

and rights of persons with disabilities in humanitarian settings. Contains checklists for preparedness activities throughout the stages of the Humanitarian Programme Cycle. IASC Guidelines on the inclusion of persons with disabilities in humanitarian action_2019.pdf

4.2.8. GBV

According to the Inter-Agency Standing Committee (IASC) GBV can be described as "any harmful act that is perpetrated against a person's will and that is based on socially ascribed (i.e., gender) differences between males and females". It can include incidents of forced marriage; psychological/emotional abuse; physical assault; denial of resources, opportunities or services; sexual assault and rape.

The IOM Emergency Manual provides an overview of GBV and tools to support your CO in addressing GBV through three institutional approaches including:

- ***Mitigating risks**:* by taking action to address the risks of GBV in all crisis operations and doing no harm. In EP, this may include empowering women through active participation in risk analysis exercises, EP trainings and community-based disaster preparedness activities. School EP programmes can be designed to empower girls through educating them about risks, evacuation procedures and first aid.
- ***Supporting survivors**:* by facilitating access to survivor-centred, multisectoral services; This may include contingency planning that considers the needs of unaccompanied women and/or girls and provides access to safe spaces, counselling and medical assistance for survivors; and
- ***Addressing the root causes**:* by contributing towards progressively transforming the conditions that perpetuate GBV such as unequal power dynamics, gender inequality and a lack of respect for human rights.

Participatory EP activities such as community-based disaster preparedness and participatory emergency planning for local hazards is an excellent way to empower all members of a community.

For more information and resources available on GBV, follow the link: Gender-Based Violence in Crises | Emergency Manual (iom.int)

4.2.9. PSEA

PSEA refers to protecting migrants and crisis-affected people from harm caused by aid workers. Agencies have been working in coordination to effectively prevent SEA and respond to incidents that do occur.

Tasked by the Inter-Agency Standing Committee, IOM has an ongoing project in the Department of Operations and Emergencies (DOE) to support inter-agency PSEA in country. This project provides global guidance and technical assistance to Humanitarian Country Teams (HCTs)/United Nations Country Teams (UNCTs) and PSEA Networks in country on inter-agency PSEA initiatives.

An important feature of PSEA is offering opportunities for migrants and crisis-affected people to access to Community-Based Complaints Mechanisms (CBCMs) where they are encouraged to safely report grievances – including SEA incidents – and those reports are referred to the appropriate entities for follow up.

Participatory EP activities should offer a CBCM to ensure any incidents are addressed in a way that minimises harm.

For more information and resources available on PSEA, follow the link: Inter-Agency Protection from Sexual Exploitation and Abuse (PSEA) | Emergency Manual (iom.int)

SECTION 4.3

ELEMENTS OF EMERGENCY PREPAREDNESS

PROJECT DEVELOPMENT CHECKLIST

© IOM 2022

4.3. INTRODUCTION - PROJECT DEVELOPMENT CHECKLIST

4.3.1. Purpose

This element of the toolkit **provides a step-by-step quality checklist** for emergency preparedness (EP) project proposal writing and project implementation.

It is intended to facilitate the development of EP project activities and proposals that are high quality in their design. Guidance provided in this document encompasses all Emergency Preparedness & Readiness components. EP activities and proposals should always be contextual as there is no single set of "agreed" EP activities, and most of EP prjects would have strong linkages with DR activities. The document gives general guidelines that should be considered across EP implementation and proposals with checklists pertaining to each of the 10 components of EP that are covered in this toolkit.

To note, not all elements of these checklist are expected to be applicable to each context.

4.3.2. General Guidelines

- Check that proper EP/DRR terminology and acronyms are used throughout the proposal.
- Avoid using the term "natural disaster" as it is no longer relevant. You may refer to natural hazards – (i.e., earthquake) but earthquakes only become a disaster when the impact exceeds local (human) capacity to cope with it.
- Check that you accurately and consistently use terminology associated with the proposed activities including preparedness, response, mitigation, prevention, and climate change. For IOM EP terminology, first check the IOM Introduction to Emergency Preparedness self-study available on iLearn. For other globally accepted DRR terminology, use the UN Office for Disaster Risk Reduction Terminology page.
- Project proposals/EP activities need to be developed with the most up to date available information and be evidence-based through risk analysis and monitoring and/or needs assessments.
- Project proposals/EP activities need to demonstrate knowledge of the context and awareness of potential overlaps and opportunities to collaborate with other actors including the interventions and areas of competence of other organizations (including humanitarian, development and peace actors, as applicable).
- IOM generally supports engagement with national coordination platforms for an efficient response and should be based on the country strategy (where applicable).
- Donor priorities should be considered and addressed in the proposal to the extent that is possible and consequent to IOM priorities and relevant to the context.
- Prioritize the use of donor indicators over custom indicators when applicable. Use the IOM indicator database as a guidance document to select the most relevant indicators for your project proposal.
- Proposed activities should be realistic in terms of timeframe and available resources, taking into consideration IOM/ Implementing Partner's (IP) capacity.
- Proposed approaches and technologies should be consistent with national standards and, where absent, cluster / sector or international standards e.g. Sendai Framework for Disaster Risk Reduction. This should be explicit in the proposal narrative and reflected in project activities.
- Cross cutting issues such as gender, gender-based violence (GBV), environmental sustainability, disability inclusion, etc. should be mainstreamed across all the entire proposal and should be taken into account in all phases of the project including measures planned to mitigate any potential negative impacts.
- Where applicable, an exit strategy should be well defined for all projects.

4.3.3. EP Project development | Quality Checklist

1. Risk Analysis *(For easier perusal between CO, RO & HQ, most of the information below could be centralized in the EP dashboard)*	YES	NO	N/A
Has your CO completed the EP dashboard, done a basic context analysis to identify the main risks in your country context? *(see PRD EP Dashboard & available Risk Analysis/Monitoring Resources)*?	☐	☐	☐
Does the analysis identify how likely the identified hazards/threats are to occur?	☐	☐	☐
Is there an analysis of the level of exposure people have to the identified hazards and threats?	☐	☐	☐
Are the different levels of vulnerabilities that people have to the identified hazards and risks identified?	☐	☐	☐
Are the coping capacities of the local authorities, civil society and community considered in the risk analysis?	☐	☐	☐
Has the risk seriousness for each hazard/threat been calculated to determine low, medium and high-level risks in your context?	☐	☐	☐
Have you completed the MPA Checklist for your Country Office?	☐	☐	☐
Based on your completed MPA checklist, have you identified gaps in preparedness and an action plan to address them (with assigned responsibilities and deadlines)?	☐	☐	☐
Have you established the country baseline situation for your context that includes historical IDP and refugee movement trends and patterns?	☐	☐	☐
Does the country baseline situation cover risks faced by different sub-groups of the population (e.g., migrants, women, disabled people, unaccompanied minors, mixed flow populations)?	☐	☐	☐
Does your CO have a risk monitoring plan and schedule with assigned responsibilities for different categories of risks in your context?	☐	☐	☐
Does the CO update the Emergency Preparedness Dashboard at least annually and more often for medium and high-level risks?	☐	☐	☐
Does the CO include risk analysis as a standing agenda item in the Senior Management Team (SMT) meetings?	☐	☐	☐
Is risk analysis information proactively communicated and shared with programmes/fundraising teams?	☐	☐	☐
Have you coordinated and shared your risk analysis with the security focal point, where applicable?	☐	☐	☐
Where applicable, does the CO participate in inter-agency coordination mechanisms for risk analysis by proactively sharing relevant information and actively participating in coordination meetings?	☐	☐	☐
2. Preparedness and Contingency/Response Planning	**YES**	**NO**	**N/A**
Does the CO have contingency plans, which document all response trigger mechanisms to be activated in the event of specified hazards (e.g., agreed response strategies, priority emergency services, coordination mechanisms, division of tasks and responsibilities)	☐	☐	☐
Are your contingency/response plans based on evidence-based findings from risk analysis and risk monitoring?	☐	☐	☐
Have you prepared multi-risk or specific contingency/response plans that cover all of the medium and high-level hazards/threats in your country context?	☐	☐	☐
Are contingency/response plans up to date (revised annually at least and every six months for medium and high-level risk)?	☐	☐	☐
Has the CO agreed with relevant stakeholders (inter-agency, government) early warning indicators and a schedule for monitoring them?	☐	☐	☐
Has the CO identified relevant EP activities/concepts to address the Gaps and Obstacles identified in the Contingency Plan template?	☐	☐	☐
Do project ideas address the preparedness needs of the intended beneficiaries?	☐	☐	☐
Do the project ideas fall in line with already identified donor priorities and funding mechanisms?	☐	☐	☐
Do the project ideas take into account the priorities, strategies, and policies of key stakeholders?	☐	☐	☐

Do the project ideas fall within IOM's capacities, mission and strategic focus?	☐	☐	☐
Have you prepared a concept note as a communication tool to share project ideas with management and internal team members, as well as DOE RTS?	☐	☐	☐
Have you engaged relevant potential stakeholders in the concept development stage to ensure buy-in and sustainability of EP activities?	☐	☐	☐
Where applicable, does the CO participate in inter-agency coordination mechanisms for contingency/response planning/readiness to respond by proactively sharing relevant information and actively participating in coordination meetings?	☐	☐	☐
3. Emergency Services/Response Mechanisms and Strategies	YES	NO	N/A
Do your planned emergency services/response mechanisms and strategies align to national disaster response strategies?	☐	☐	☐
Have you gathered pre-existing risk specific joint contingency/response UN plans (HCT, UNCTs) to inform your emergency services/response mechanisms and strategies?	☐	☐	☐
Have you verified if and how planned emergency services/response mechanisms and identified where there are residual gaps in humanitarian response?	☐	☐	☐
Has your analysis of emergency response capacity considered existing assessments such as inter-agency/inter-sectoral assessments, cluster/sectoral assessments, agency-specific assessments and the Displacement Tracking Matrix, where available?	☐	☐	☐
Have you analysed the government's and the partners' capacities and gaps in the current response?	☐	☐	☐
Have you determined the government's position with regards to support from partners at the national and subnational levels?	☐	☐	☐
Have you developed an IOM emergency response strategy and plans with overall objectives and priority actions that reflect existing resources and capacity of government and partners?	☐	☐	☐
4. Resource Allocation and Funding Mechanisms	YES	NO	N/A
Have you identified the main donors for emergency response in your country context?	☐	☐	☐
Have you identified donors that are known to provide funding for emergency preparedness, including bilateral donors?	☐	☐	☐
Does your analysis of the donor landscape include a description of IOM traditional donors and the type of activities they fund?	☐	☐	☐
Does your analysis of the donor landscape include an analysis of how donor relationships could be strengthened?	☐	☐	☐
Does your CO team effectively engage with external funding mechanisms including Central Emergency Response Fund, Country-based Pooled Funds, bilateral preparedness donors and/or Anticipatory Actions funding?	☐	☐	☐
Is your CO team familiar with Emergency fundraising tools including Flash Appeals and the Humanitarian Response Plan templates?	☐	☐	☐
Have you checked if and how any existing response funding and/or resources could be better used by reallocating them to emergency preparedness activities?	☐	☐	☐
Does your CO team effectively engage with internal funding mechanisms including the Migration Emergency Funding Mechanism?	☐	☐	☐
Is your project proposal reflected and/or aligned with overall fundraising tool, the Global Crisis Response Platform (GCRP) under DRR/EP activities?	☐	☐	☐
Do proposals from your CO effectively reference key global fundraising frameworks such as Good Humanitarian Donorship & The Grand Bargain?	☐	☐	☐
Has your CO developed/maintained an IOM agency-specific Crisis Response Plan (see IOM Global Crisis Response Plans) and (potential) Flash Appeal that align to country and global level plans including HRP and Flash Appeals?	☐	☐	☐
Have you analysed the CO's capacity for accessing funding and diversifying funding sources?	☐	☐	☐
5. Coordination	YES	NO	N/A
Does IOM senior management and programs staff in your CO have a good understanding of pre-crisis coordination and management arrangements, whether led by national/local authorities with or without the support of a Resident Coordinator or the Office for the Coordination of Humanitarian Affairs?	☐	☐	☐

Does the CO have a good understanding of coordination management arrangements for disaster response and coordination in mixed situations and refugee response in the country context?	☐	☐	☐
Has the CO prepared and implemented a plan to strengthen coordination capacity?	☐	☐	☐
Has the CO analysed key stakeholders for disaster preparedness and response using the Participation Matrix (see component 5 of the toolkit)?	☐	☐	☐
Has the CO established relationships and engaged with stakeholders in preparedness and response according to the completed Participation Matrix?	☐	☐	☐
Has the CO analysed whether the planned post-crisis coordination arrangements are structured and functioning as planned before the disaster (considering plans may need to be adapted if those with roles and responsibilities were impacted by the crisis).	☐	☐	☐
Post-crisis: Has the CO established and maintained relationships with national, local and community-level authorities in the response?	☐	☐	☐
Post-crisis: Does the CO engage with inter-agency coordination platforms for the response (i.e., participating in meetings, joint needs assessments, joint situation reports and coordinated funding appeals)?	☐	☐	☐
Post-crisis: Does the CO actively engage with donors to share the identified needs and gaps in the response that can be addressed through IOM programming?	☐	☐	☐
6. Information Management and Communication	YES	NO	N/A
Has the CO established an IOM coordinated emergency information management system? (e.g. increasing readiness by having a prepared SharePoint internal page for IM/KM ready to activate during emergency)	☐	☐	☐
Have you established a clear picture of the likely CO's information needs in potential emergencies?	☐	☐	☐
Do you trainings in place or planned around data collection, to ensure consistency and trustworthy data?	☐	☐	☐
Does your CO apply data protection principles for balance between collecting/sharing information while protecting individuals against misuse of information? (See Principles for protecting individuals in data management in Component 3.06.)	☐	☐	☐
Is the analysis of data in your CO adequate for identifying minimal gaps and shortcomings in the planning and provision of services and assistance?	☐	☐	☐
Is data disaggregated by demographics, by sector and by implementing agency (for effective coordination)?	☐	☐	☐
Does the CO actively use cluster/sector analysis tools and templates for all stage of the Humanitarian Programme Cycle to ensure coordinated humanitarian services?	☐	☐	☐
Has the CO considered a communication strategy or conducted planning to think through your communication objectives, distinct audiences, messaging, and a schedule of activities for dissemination?	☐	☐	☐
Does the CO offer opportunities for two-way communication through participatory planning and engagement with actors at different levels (i.e., government and community) to ensure Accountability with Affected populations?	☐	☐	☐
7. Early Warning Systems (EWSs)	YES	NO	N/A
Does your EWS include activities which strengthen national/local capacities for response preparedness?	☐	☐	☐
Do EWS training and learning activities promote the inclusion of migrants in emergency preparedness?	☐	☐	☐
Does of the EWS account for the public's perceptions of warnings and their beliefs and attitudes regarding disasters?	☐	☐	☐
Does the EWS include activities which strengthen community response preparedness and DRR capacity?	☐	☐	☐
Do community response preparedness strengthening activities cover risks to the community, options for safe behaviour, available escape routes and how to best avoid damage to property?	☐	☐	☐
Do early warnings and evacuation planning reflect the community's language abilities, first-hand knowledge of migrant populations, and understanding of cultural norms?	☐	☐	☐

Do evacuation plans consider and address the different needs of people within the community (i.e., older people and persons with disabilities who need extra protection measures and physical support to move safely to a different location, and can understand the early warning message).	☐	☐	☐
Have the migrants themselves and civil society partners taken an active role in identifying people with vulnerabilities and special needs for early warning and evacuation?	☐	☐	☐
Have migrants themselves and civil society partners actively participated in identifying solutions to address any required special protection measures and needs for evacuation?	☐	☐	☐
Have emergency management plans been located in a place or communicated in a way that is easily accessible to stakeholders with roles and responsibilities leading up to and during a crisis?	☐	☐	☐
In EW communications, have you worked in close coordination with government and inter-agency actors to agree on consistent crisis and hazard-specific communications to people at risk of displacement?	☐	☐	☐
Do EW communications include a description of potential risks associated with a crisis, where and how to obtain assistance and how to inform stakeholders of their needs?	☐	☐	☐
Do IOM communications address language, cultural and other barriers (including impacts of crises such as power failures, loss of internet and satellite systems).	☐	☐	☐
Is the CO prepared to disseminate pre-event risk communications and early warnings in line with government and local authority's direction using multiple communication channels, as necessary?	☐	☐	☐
8. Community-Based Disaster Preparedness (CBDP) & Readiness	YES	NO	N/A
Have you proactively engaged and sensitized local leaders and communities to the CBDP initiative before it starts?	☐	☐	☐
Do CBDP plans reflect local leaders' and community perceptions of risks, concerns and priorities for improving disaster and crisis preparedness?	☐	☐	☐
Has a Participation Matrix been completed defining how CBDP stakeholders will be engaged at each stage of the CBDP (i.e., during assessment, design, implementation, monitoring as well as linkages with Accountability of Affected Population (AAP) practices)?	☐	☐	☐
Have you/IOM partners conducted a participatory vulnerability and capacity assessment (VCA) exercise with relevant stakeholders in the community using a variety of tools that allow for triangulation of information?	☐	☐	☐
Has the community developed an action plan based on the results of the VCA that defines activities, timeframes, human resources and other resources available, resources needed and committee/people responsible?	☐	☐	☐
During the planning stage, have you set realistic expectations for IOM's involvement that promote a smooth handover and sustainability of the project?	☐	☐	☐
With IOM's support, has the community developed a disaster plan which describes the hazards, objectives and indicators for the success of the CBDP project?	☐	☐	☐
Has IOM supported the community to create a coordinated calendar of events for the entire project ensuring alignment to other local civil defence and/or civil society activities?	☐	☐	☐
Does the project plan include (at least) monthly status meetings for tasking, mobilising community resources, capacity building, monitoring and review, and making adjustments?	☐	☐	☐
Does the CBDP project plan include an implementation, monitoring and evaluation system that covers progress on activities, time frames, budget, indicators, outputs, objectives and the impact of the disaster preparedness measures?	☐	☐	☐
At the end of the project, has a participatory After-Action Review to evaluate the project and lessons learned been planned and implemented?	☐	☐	☐
Have the lessons learned during the After-Action Review been documented and disseminated to relevant stakeholders for improved disaster preparedness actions in the future?	☐	☐	☐

At the end of the project, has the project been handed over to relevant stakeholders/authorities in a way that promotes sustainability (as part of a clear exit strategy)?	☐	☐	☐
9. Capacity Development/Training and Exercises	YES	NO	N/A
Have you engaged relevant stakeholders in capacity development and gained their support for activities?	☐	☐	☐
Have you conducted a capacity development/learning needs analysis to identify preparedness/response learning needs in your CO context?	☐	☐	☐
Does your capacity analysis describe how equipped government/ partners are to meet humanitarian needs and the needs of migrants in emergency response?	☐	☐	☐
Have you determined what capacity development activities can best be delivered by IOM to contribute to humanitarian/ migrants' needs being met more effectively when a disaster strikes?	☐	☐	☐
Has your CO identified in what ways IOM can contribute to enhancing government/partners' capacity for emergency response preparedness?	☐	☐	☐
Have you defined intended participants for capacity development/learning activities and assessed their learning preferences and requirements?	☐	☐	☐
Have relevant stakeholders been actively involved in identifying capacity development / learning activity design?	☐	☐	☐
Have you defined objectives for your capacity development/training activities as a whole and for its component parts?	☐	☐	☐
Are any capacity development/learning materials being used contextualised to ensure they are appropriate for the country context?	☐	☐	☐
Have participants of capacity development/learning activities been supported throughout the activities to meet the objectives (i.e., with technical, logistical and practical issues that may prevent them from engaging)?	☐	☐	☐
Do capacity building/training activities draw on participants' knowledge and experience?	☐	☐	☐
Have steps been taken to mitigate safety and security risks to participants?	☐	☐	☐
Has a monitoring and evaluation plan for the capacity development/training project been developed and implemented?	☐	☐	☐
10. Institutional and Legislative Frameworks	YES	NO	N/A
Has your CO engaged with the Global Crisis Response Platform (GCRP) and updated and shared your country's crisis plan so that the RO and HQ are informed of your strategies?	☐	☐	☐
Has your CO engaged with the Migrants in Countries in Crisis (MICIC) Initiative and can you articulate how your current preparedness activities relate to it?	☐	☐	☐
Is your CO part of inter-agency disaster preparedness frameworks including the Inter-Agency Standing Committee's (IASC's) Emergency Response Preparedness (ERP) & the Office for Coordination of Humanitarian Affairs (OCHA) Anticipatory Action approaches?	☐	☐	☐
Do you engage with inter-agency disaster risk reduction (DRR) frameworks that can inform EP work including the Sendai Framework for DRR and the Words into Action: Disaster Displacement: How to Reduce Risk, Address Impacts and Strengthen Resilience?	☐	☐	☐
Have you identified inter-agency frameworks that are being applied in your country context and mapped existing CO activities to them?	☐	☐	☐
Have you identified the existing national laws, policies and strategies in place for disaster risk management/ preparedness and the extent to which these are being implemented as planned at national/local levels?	☐	☐	☐
Have you identified the existing national laws, policies or strategies in place relating to displacement and/or its resolution and the extent to which these are being implemented as planned at national/local levels?	☐	☐	☐
Can you determine the relevant local or regional/international frameworks in place that are being actively engaged in the country?	☐	☐	☐
Have you identified ways in which IOM can advocate for migrants in EP and response?	☐	☐	☐
