KEY POINTS

- Preparation, planning, and practice are key to surviving an earthquake.
- Learn what actions you can take to prepare for an earthquake and what you can do to help keep yourself and your loved ones safe during and after an earthquake.

Prepare for earthquakes

Preparation, planning, and practice are key to surviving an earthquake.

There are many places in the United States, called “fault zones,” that are at risk for serious earthquakes. These include states along the west coast, in the south, and in the central United States. While very

strong or intense earthquakes are rare, less powerful earthquakes can also be dangerous. The key to surviving an earthquake and reducing your risk of injury lies in planning, preparing, and practicing what you and your loved ones will do if it happens.
